Advanced Transportation District Program, City of San Antonio. Project Manager. The project included scoping, cost estimating, and construction drawings for sidewalk replacement projects throughout the City of San Antonio. The program also included bid preparation and advertisement, construction inspection and administration, and contract closeout. Ms. Green's responsibilities included site visits, preliminary analysis, identifying environmental constraints, identifying utility conflicts, and preparing construction drawings. She was responsible for coordinating with the contractor and citizens to provide information on the project areas.

CODY CONDRON, RPLS, PLS, CP, CMS
Project Manager

Coursework in Geographic Information Science, Texas A&M University Corpus Christi // RPLS #5899; CP #R1616CP; CMS #R001UAS; FAA Part 107 UAS (Drone) Pilot #3929273 // 30 Years' Experience

With more than 30 years of land surveying experience, Mr. Condron is one of a handful of professionals to hold both a Registered Professional Land Surveyor and Certified Photogrammetrist license in Texas. He is also the first Certified Mapping Scientist UAS. He oversees all aspects of day-to-day survey operations. Mr. Condron possesses extensive experience and knowledge in control surveys, property descriptions, property conveyance documents, topographic and boundary surveys, GPS, construction staking, aerial mapping, bathymetric surveys, and land development. He has performed work with public and private entities and several production and custom home builders and land developers throughout Texas. The surveys produced for these entities vary from pre-construction design work through completion of projects, along with monitoring of projects after completion. Due to Mr. Condron's diverse and broad background, he has gained experience as an expert witness for numerous cases that require extensive knowledge relating to all aspects of surveying. Recently, Mr. Condron worked with the Port of Brownsville, the cities of Mercedes, Brownsville, and Edinburg, and HCDD1. His work for some of these clients involved using drones for topographic surveys and 3-D modeling. His experience within the last 12 months is provided below:

North Main Drain III Phase 1 Stormwater, City of Edinburg. Survey Manager. Mr. Condron oversaw the survey services for the PS&E drainage design for the North Main Drain III Phase I Project. KCI completed research, field work, analysis, computation, and documentation necessary to complete a detailed topographic survey of the project site. Utilizing GPS, Digital levels and conventional survey equipment we located cross-sections, horizontal and vertical locations of utilities and improvements, and details of bridges and structures. We also reviewed right-of-way maps and established control points. KCI completed right of entry, right-of-way research, and deed and plat research.

Alley Rehabilitation, City of McAllen. Survey Manager. This project's primary objective was to rehabilitate 26 alleys in sub-par conditions while prioritizing the mitigation of utility conflicts and enhancing drainage efficiency. Mr. Condron oversaw a comprehensive topographic survey, which proved instrumental in facilitating the precise identification and resolution of utility conflicts through the development of a utility conflict matrix. This survey also provided terrain elevations from which we created a digital terrain model essential for the drainage design process.

Faysville Drain, Hidalgo County Drainage District No. 1. Survey Manager. KCI was awarded a contract by the HCDD1 for engineering services of a proposed segment of the Faysville Drain. Topographic survey was required to show existing hydraulic and hydrologic conditions to be analyzed using WMS, HEC-HMS, and Rain on 2D Mesh component within HEC-RAS. KCI provided QA/QC over all survey deliverables verifying all State and HCDD1 standards were met.

SH 48, TxDOT Pharr District. Survey Manager. KCI provided schematic design for the rehabilitation of SH 48 from FM 511 to SH 4. There were four crossings to be analyzed, each included a report and coordination with drainage districts, the County, and the City. The first task was to define the drainage area in a flat area, then analyze the Resacas and irrigation ditches using HEC-RAS. The survey portion included horizontal and vertical control throughout the project, aerial mapping and topography by use of LiDAR, supplemental topographic work for water crossings including work upstream and downstream to assist in H&H analysis, and quality level B and C subsurface engineering support.

Queens Park Commercial Development, International Weight Inspection Services, LLC. Survey Manager. This project is an approximately 30-acre commercial development at the Southwest intersection of Las Milpas Road and South I Road. KCI prepared a Boundary Survey, Category 6 Design Topographic survey and performed Subdivision Platting no less than the minimum standards as described by the TBPELS.

Mile 1 East Improvements, City of Mercedes. Survey Manager. This project included S&E review and PS&E services for the reconstruction of Mile 1 East for the City of Mercedes. This 1.4 mile corridor runs from BUS 83 (south end) to the Mile 8 North (north end) and consists of urban and rural roadways. This project is a local let project in Hidalgo County funded by federal, state, and city monies. Survey items included right-of-way mapping, topographic survey, aerial mapping, and utility locations.

OSCAR GARZA, PE, SIT

Projects Coordinator | Topographic & Tree Surveys

BS in Civil Engineering, University of Texas San Antonio // PE #122125; SIT #122125 // 13 Years' Experience

Mr. Garza is personally invested in this region's infrastructure as a Hidalgo County resident, business owner, Director for the Hidalgo County Irrigation District #6, and Manager of KCI's Mission Office.

Mr. Garza has amassed practical and proven project methodology to solve unique design issues and challenging project schedules. His key strengths include project management, agency coordination, project scoping, scheduling, budgeting, cost control, design processes, and problem resolutions. His background includes H&H; drainage, roadway, and traffic design; and construction engineering and inspection. Prior to joining KCI, Mr. Garza worked for the TxDOT Pharr District. He served as Deputy Project Manager and Task Leader for the following projects developing comprehensive PS&E, and bidding documents for these projects:

Alley Rehab, City of McAllen. Project Manager. The primary objective of this project was the rehabilitation of alleys in subpar conditions while prioritizing the mitigation of utility conflicts and enhancing drainage efficiency. KCI orchestrated the design of horizontal alignment, vertical alignment, pavement, and driveways for 26 alleys within the City of McAllen utilizing OpenRoads Designer software. Conducting a comprehensive topographic survey proved instrumental, facilitating the precise identification and resolution of utility conflicts by developing a utility conflict matrix. This survey also provided terrain elevations from which we created a digital terrain model essential for the drainage design process.

Brennaaleen Drainage Improvements, City of Edinburg. Survey Technician. The drainage project aims to alleviate flooding in Brennaaleen Park, Cedar

Heights, and Greenbriar Subdivisions by creating additional detention volume. The project will be carried out in two phases. Phase I involves the construction of a 120 LF bore and a 36-inch storm sewer connection leading to the proposed detention pond. The pond will discharge into the drainage canal near Freddy Gonzalez Drive. To adequately convey stormwater from the Greenbriar Subdivision and mitigate flooding, a 15-foot drainage easement will be obtained. During Phase II, the paving on Cedar Street, extending from Freddy Gonzalez north to the cul-de-sac, and Cynthia Drive, from Freddy Gonzalez Drive to north to Cedar Street, will be reclaimed. Additionally, the drainage infrastructure in Cedar Heights and Greenbriar subdivisions will be replaced with new infrastructure. These improvements will enhance the drainage system's capacity, thereby reducing the risk of flooding. Another firm conducted a survey; however, some of the data required verification, thus necessitating field visits. These visits proved to be pivotal in redesigning the drainage system. The residents' property was considered throughout the process, and the design was modified accordingly while maintaining efficiency.

Faysville Drain, Hidalgo County Drainage District No. 1. Project Manager. Mr. Garza is providing Construction Administration Services. His services include evaluation of value engineering design alternatives, utility coordination, review and recommendation of utility relocation plans, utility construction verification, develop bid package, support the County in advertising the project, review and recommendation of field changes, especially in regard to unexpected field conditions, review of shop drawings, review and package change orders, provide minor redesign, provide guidance and recommendations in response to Request for Information, maintain construction schedule, provide progress reports, construction inspection and verification, review and recommend approval of contractor invoices.

LEWIS HARRISON, RPLS

Boundary & Property Surveys

BS in GIS, Texas A&M University Corpus Christi // RPLS #6788 // 13 Years' Experience

Mr. Harrison has more than 13 years of experience performing boundary surveys of various certifications (board minimum standard, CAT-1A, ALTA/NSPS), and the specifications required to meet survey standards. He works with engineers, architects, and project managers to put together design survey scopes and budgets to meet the project's needs and deliverables, meeting municipal requirements. His experience includes reviewing construction drawing sets and creating construction staking survey scopes for projects ranging from apartment complexes to +/- 20,000 feet of railroad spur extensions. He works with clients to meet their surveying needs on long term projects, utilizing and incorporating geospatial data from LiDAR, photogrammetry, and bathymetric data to fulfill survey requirements. Mr. Harrison has worked on large and small projects that require problem solving and attention to detail. He has performed work with public and private entities, including Fort Bend County, Harris County, City of Pasadena, TxDOT, City of Houston, City of Friendswood and more.

Alley Rehab, City of McAllen. Surveyor. The primary objective of this project was the rehabilitation of alleys in subpar conditions while prioritizing the mitigation of utility conflicts and enhancing drainage efficiency. KCI orchestrated the design of horizontal alignment, vertical alignment, pavement, and driveways for 26 alleys within the City of McAllen utilizing OpenRoads Designer software. Conducting a comprehensive topographic survey proved instrumental, facilitating the precise identification and resolution of utility conflicts by developing a utility conflict matrix. This survey also provided terrain elevations from which we created a digital terrain model essential for the drainage design process. To optimize drainage performance, we implemented an inverted crown typical section while maintaining minimal profile cross slopes to ensure a steady flow across the entirety of the alleys. Lastly, we estimated the construction costs for each alley, ensuring adherence to the City's budgetary constraints while incorporating a 20% contingency provision.

World Trade Bridge Expansion Project, City of Laredo. Surveyor. KCI is providing the civil engineering, surveying, design and plan development for the expansion of the World Trade Bridge Port of Entry. Surveying includes the US and Mexico sides of the Rio Grande River, along with survey measurements of the river itself. Civil engineering included roadway design, storm drainage, traffic control, complex construction phasing, and utility coordination. The design includes hydrologic analysis of the Rio Grande River to

determine the impact of the new bridge structure expansion.

TxDOT IH35: MM16 to MM30, TxDOT Laredo District. Surveyor. KCI is providing surveying and utility coordination services for the widening of IH 35 from 2.68 miles north of the Uniroyal Interchange to 1.2 miles north of the US 83 Interchange. Surveying includes tying all existing utilities and improvements found along the corridor, along with right-of-way acquisition. Additionally, KCI coordinated closely with TxDOT on utilities and improvements located within TxDOT right-of-way and utility coordination with all local facility owners.

BILL REEVES, RPLS

Right-of-Way Surveys

BS in Geosciences, Texas Tech University // RPLS #7008; FAA Part 107 UAS (Drone) Pilot // 8 Years Experience

Mr. Reeves has experience in boundary and topographic surveys as well as construction staking, ALTA surveys, plats, and as-builts. He is proficient in topography for design, boundary, and easements for gas pipeline rebuilds. Mr. Reeves is knowledgeable in MicroStation, AutoCAD, and BlueSky.

North Main Drain III Phase 1 Stormwater, Hidalgo County. Surveyor. KCI provided design survey services for the PS&E drainage design for the North Main Drain III Phase I Project.

FM 1426, TxDOT Pharr District. Surveyor. KCI assisted with developing conceptual planning options to upgrade pedestrian mobility and add quality-of-life improvements on South Nebraska Avenue (FM 1426) from BU 83 to IH 2. As part of this preliminary design development, KCI improved ADA compliance of sidewalks on the East and West sides of South Nebraska Avenue, lighting for vehicular and pedestrian safety, parking improvements, and landscape and hardscape improvements. KCI also developed a four-foot-wide median with type IV curbs to be placed on the center line of South Nebraska Avenue. The survey services included verifying established control and support underground utility locations. KCI utilized GPS and conventional survey equipment for verifying and mapping QL A, B, and C SUE.

Koeblen Road Segment 3, Fort Bend County. Survey Manager. KCI is providing land surveying services for the re-alignment and construction of the four-lane thoroughfare from FM 2218 to the Rosenburg city limits. The project consists of establishing control and temporary benchmarks throughout the project, abstracting and retracements of existing right-of-way and adjoining parcels, topographic survey of existing and proposed right-of-way, preparation of control and right-of-way maps, and Category 1A title surveys for all parcel takings..

AARON VANDERSLICE, RPLS, PLS, CFedS

Special Reports

AAS in Civil Engineering, Tulsa Community College // RPLS #6931; CFedS #1791 // 18 Years' Experience

Mr. Vanderslice possesses over 18 years of diverse experience in the field of land surveying. His professional journey has encompassed working for major municipalities, a federal tribal government, and various private firms, allowing him to amass invaluable expertise in managing a wide spectrum of clients and survey types. Mr. Vanderslice's portfolio includes projects such as delineating boundaries, establishing rights-of-way, providing construction staking, delivering design services, and conducting volume quantity verifications for a broad array of developments, including roads, highways, single and multi-family dwellings, commercial retail spaces, medical facilities, and educational institutions. He has been fortunate to hold the position as both client and service provider, thereby gaining a greater understanding of what is not only desired, but expected from both sides of the table.

Surveying Services in Bexar, Comal, Kendall, and Guadalupe Counties, TX. Survey Director/Manager. While employed with Hill Country Survey COmpany, Mr. Vanderslice led a team of professionals comprising professional land surveyors, surveyors-in-training, technical staff, and field crews. He worked closely with clients, providing cost estimates and managing project budgets and timelines. Primarily focused on assisting commercial and single-family residential developers, Mr. Vanderslice and his team offered comprehensive surveying services, guiding projects from conception to completion and ensuring timely delivery, providing a quality product.

Surveying Services, Muscogee Creek Nation (MCN). Tribal Surveyor. While employed with MCN, Mr. Vanderslice provided land surveying for multiple utility owners to ensure accurate mapping and documentation of land features and boundaries. These services helped in the precise placement of utilities such as water, gas, electricity, and telecommunications. He delivered accurate and detailed surveys, enabling utility owners to efficiently manage their assets, prevent disputes, and comply with regulatory requirements, ultimately contributing to the safe and effective operation of their services. Utility owners covering a 13 county jurisdiction included:

- Oklahoma Natural Gas
- Canadian Valley Electric Cooperative
- American Electric Power
- Cities of Tulsa, Muskogee, Okmulgee, Broken Arrow, Okemah

Survey IDIQ Oklahoma Department of Transportation (ODOT). Survey Manager. Mr. Vanderslice provided surveying services to establish ODOT right-of-way across various project. These projects ranged from drainage and utility improvements to addressing boundary issues and ensuring proper ingress and egress. He was also provided surveying for road and bridge improvements. Furthermore, Mr. Vanderslice was involved in the new construction, as well as additions and renovations of key facilities, including hospitals, educational institutions, office buildings, and residential buildings.

BALDOMERO CERVANTES

Survey Coordination/Communication Liaison

AS in Drafting and Design, Texas State Technical Institute // 39 Years' Experience

Mr. Cervantes' experience drafting and mapping documents for municipal, county, and state engineering and surveying projects. He is experienced in developing civil construction plan sets and survey deliverables in both MicroStation and AutoCAD. He is proficient with many third party software systems including GEOPAK, Civil 3D, and Trimble Geosystems. He incorporates existing conditions tied to the required datum, performs calculations, and produces digital 2D and 3-D data in the specified file type. He has developed schematic and final plans, specifications, and estimates for city, county, and state transportation system improvements. His background also includes site development including parking lot layouts, utility upgrades and replacements, and complex drainage systems and oil and gas survey documents. Mr. Cervantes assisted the Port of Brownsville, City of Mercedes, and Hidalgo County demonstrating the use of drones for topographic surveys and 3-D modeling. His relevant experience includes:

Queens Park Commercial Development, International Weight Inspection Services, LLC. Survey Coordinator. This project is an approximately 30-acre commercial development at the Southwest intersection of Las Milpas Road and South I Road. KCI prepared a boundary survey, Category 6 Design Topographic survey, and performed Subdivision Platting no less than the minimum standards as described by the TBPELS.

Mile 1 East Improvements, City of Mercedes. Survey Technician. This project included S&E review and PS&E services for the reconstruction of Mile 1 East for the City of Mercedes. This 1.4 mile corridor runs from BUS 83 (south end) to the Mile 8 North (north end) and consists of urban and rural roadways. This project is a local let project in Hidalgo County funded by federal, state, and city monies. KCI is involved in developing the Advanced Funding Agreement between the RGV MPO, TxDOT, City of Mercedes, and Hidalgo County. Mr. Cervantes provided survey coordination for the right-of-way mapping, topographic survey, aerial mapping, and utility locations.

US 281 Rural Expressway Facility, TxDOT Pharr District. Survey Technician. This project was for proposed improvements to US 281 in Hidalgo County. KCI was responsible for directing and coordinating all activities associated with the project to comply with state and federal policies and procedures, and to deliver the work on the established timeline.

ESEQUIEL SALAZAR

Survey Technician

2 Years' Experience

Mr. Salazar plays a crucial role in land development, construction, and engineering projects, utilizing his knowledge and expertise of the LRGV. He has a robust understanding of survey principles and operates advanced surveying

equipment such as GPS and total stations to collect precise data. His experience includes working in diverse environments, from urban areas to remote natural landscapes, ensuring accurate measurements for property boundaries, topographic maps, and infrastructure planning. Mr. Salazar collaborates closely with engineers, architects, and planners, contributing essential information that underpins successful project execution and development. His relevant experience includes:

Brennaaleen Drainage Improvements, City of Edinburg. Survey Technician. The drainage project aims to alleviate flooding in Brennaaleen Park, Cedar Heights, and Greenbriar Subdivisions by creating additional detention volume. The project will be carried out in two phases. Phase I involves the construction of a 120 LF bore and a 36-inch storm sewer connection leading to the proposed detention pond. The pond will discharge into the drainage canal near Freddy Gonzalez Drive. To adequately convey stormwater from the Greenbriar Subdivision and mitigate flooding, a 15-foot drainage easement will be obtained. During Phase II, the paving on Cedar Street, extending from Freddy Gonzalez north to the cul-de-sac, and Cynthia Drive, from Freddy Gonzalez Drive to north to Cedar Street, will be reclaimed. Additionally, the drainage infrastructure in Cedar Heights and Greenbriar subdivisions will be replaced with new infrastructure. These improvements will enhance the drainage system's capacity, thereby reducing the risk of flooding. Another firm conducted a survey; however, some of the data required verification, thus necessitating field visits. These visits proved to be pivotal in redesigning the drainage system. The residents' property was considered throughout the process, and the design was modified accordingly while maintaining efficiency.

Alley Rehab, City of McAllen. Survey Technician. The primary objective of this project was the rehabilitation of alleys in subpar conditions while prioritizing the mitigation of utility conflicts and enhancing drainage efficiency. KCI orchestrated the design of horizontal alignment, vertical alignment, pavement, and driveways for 26 alleys within the City of McAllen utilizing OpenRoads Designer software. Conducting a comprehensive topographic survey proved instrumental, facilitating the precise identification and resolution of utility conflicts by developing a utility conflict matrix. This survey also provided terrain elevations from which we created a digital terrain model essential for the drainage design process.

North Main Drain III Phase 1, Hidalgo County. Surveyor. KCI provided design survey services for the PS&E drainage design for the North Main Drain III Phase I Project.

US 281 Segment 1: SH 186 to FM 490, TxDOT Pharr District. Survey Technician. This project is for proposed improvements to US 281 in Hidalgo County. KCI is responsible for directing and coordinating all activities associated with the project to comply with state and federal policies and procedures, and to deliver the work on the established timeline.

SCOTT STOCKBURGER, PE

Utilities/SUE Manager

BS in Civil Engineering, Texas A&M University // Professional Engineer #80299 // 35 Years' Experience

Mr. Stockburger is a transportation engineer with 35 years of experience specifically focused on utility design, coordination, and relocation. He is also an expert in highway design and construction, which enables him to understand and mitigate various conflicts on complex projects. He has managed complex projects involving large groups of technical employees and consultants, as well as multiple project phases from schematics and PS&E stages through construction. He is knowledgeable and compliant with applicable rules, regulations, plans, and specifications. He has extensive knowledge of the TxDOT Utility Accommodation Rules (UAR); Code of Federal Regulations (CFR); right-of-way policies and procedures; and utility agreements including preparation, contracts, conflict analysis and corridor planning.

City of Mercedes, Mile 1 East Improvements. SUE Technician. This project included S&E review for the reconstruction of Mile 1 East for the City of Mercedes. This 1.40-mile corridor runs from BUS 83 (south end) to the Mile 8 North (north end) and consisted of urban and rural roadways. This project was a local let project in Hidalgo County funded by federal, state, and city monies. KCI developed the Advanced Funding Agreement between the RGV MPO, TxDOT, City of Mercedes, and Hidalgo County.

SH 48, TxDOT Pharr District. SUE Engineer. KCI provided schematic design for the rehabilitation of SH

48 from FM 511 to SH 4. There were four crossings to be analyzed, each included a report and coordination with drainage districts, the county, and the city. The first task was to define the drainage area, then analyze the resacas and irrigation ditches using HEC-RAS.

US 77 Utility Coordination, TxDOT Pharr District. Principal-in-Charge. This $166.7M TxDOT project is for upgrading US 77 to a freeway by constructing mainlanes and overpasses. The limits are from the Willacy/Kenedy County line to the Kenedy/Kleberg County line for 45.2 miles. The project was divided into segments 1A, 1B, 2A, 2B, and 2C for 23 miles. Segments 3, 4, and will begin in the next few months. KCI provided utility coordination and QL-A, -B, -C, and -D SUE. Levels C and D were performed first to allow for the determination of locations for QL-A test holes. The survey work was in conjunction with the SUE QL-A, -B, -C, and -D.

COLE PRESTON, PE

SUE Task Leader

BS in Civil Engineering, University of Memphis // Professional Engineer #144595 // 6 Years' Experience

Mr. Preston brings experience in utility coordination and engineering on both large and small municipal, state, and private projects. He has demonstrated expertise in utilizing TxDOT's Utility Cooperative Management Process. Mr. Preston has performed quality reviews of both NAASCO PACP and MACP inspections and made recommendations for continuous maintenance on a consent decree driven sewer rehabilitation program. He has utilized communication skills to keep various stakeholders aligned with the goals of each project.

US 77 Utility Coordination, TxDOT Pharr District. Utility Adjustment Coordinator. Mr. Preston worked closely with the Advanced Project Development Engineer and her staff, as well as District utility coordination staff, to implement the avoid, minimize, accommodate (AMA) approach throughout the process. This includes utility mitigation and relocation planning and working with the design team to provide utility location data where design alternatives can be evaluated, utility agreement assistance with TGS, UIR permitting assistance, and utility conflict matrix preparation and maintenance. Mr. Preston also performed close coordination with the Town of Horizon City. He is currently performing utility coordination meetings with owners, the design team, and utility consultants to clear the proposed project of utility conflicts by the clearance dates specified in the Construction Management Plan.

SH 48, TxDOT Pharr District. SUE Engineer. KCI provided schematic design for the rehabilitation of SH 48 from FM 511 to SH 4. There were four crossings to be analyzed, each included a report and coordination with drainage districts, the county, and the city. The first task was to define the drainage area, then analyze the resacas and irrigation ditches using HEC-RAS.

Mile 1 East Improvements, City of Mercedes. Project Engineer. This project included S&E review and PS&E services for the reconstruction of Mile 1 East for the City of Mercedes. This 1.4 mile corridor runs from BUS 83 (south end) to the Mile 8 North (north end) and consists of urban and rural roadways. This project is a local let project in Hidalgo County funded by federal, state, and city monies. KCI is involved in developing the Advanced Funding Agreement between the RGV MPO, TxDOT, City of Mercedes, and Hidalgo County.

TAB 3

ABILITY TO MEET SCHEDULES AND DEADLINES

ABILITY TO MEET SCHEDULES

Our hands-on approach equips KCI with the appropriate resources to meet project schedules. We understand that delivering on-time projects to the City is of the utmost importance and the key to achieving this success is preparation and adherence to all established milestones. We understand that schedules are "lost" a day at a time; our monitoring program will prevent that from occurring. KCI will prepare a detailed Critical Path Method (CPM) schedule for projects issued under this contract and will address schedule issues during the scoping meeting. Preparing a detailed CPM schedule helps to confirm all tasks are defined and their interdependence is understood. We will work closely with the designated primary point of contact from the City while developing and maintaining your project's schedule. Adherence to the schedule is critical to evaluating performance and will be a main topic at KCI's internal production meetings. We understand that delays happen; however, building a project delivery schedule that accounts for the unforeseen is imperative to keeping a project on schedule and meeting milestone dates.

Mr. Condron can anticipate potential design delay issues and proactively adjust resources to maintain project schedules. He will use project controls to shift resources, respond to schedule changes, and respond early to tasks that threaten the schedule. Should schedule delays occur, he will redirect the necessary resources to maintain the agreed upon schedule. Any delays will be immediately communicated to the City's representative. KCI is committed to maintaining the project's schedule including working extended hours and/or on weekends as needed.

When it comes to maintaining the project budget, we understand that the success of this begins with developing an accurate budget. We will perform a site visit, verify we have a complete understanding of the project scope, and confirm all parties have a clear understanding of the project budget. The goal is to avoid project overruns and the need for supplementals.

As illustrated in the table below, KCI has a long history of implementing the above approach to meet project schedules and budgets.

PROJECT	ORIGINAL SCHEDULE	FINAL SCHEDULE	ORIGINAL BUDGET	FINAL BUDGET
Brenaaleen Drainage Edinburg, TX	03/2023 to 08/2023	03/2023 to 12/2023*	$56,033	$67,082*
Stage Coach Trail Brownsville, TX	07/2022 to 02/2023	07/2022 to 06/2023**	$166,707	$166,707**
Alley Rehab McAllen, TX	08/2023 to 8/2024	08/2023 to 07/2024	$179,620	$179,620
Traffic Signal Improvements Brownsville, TX	9/2022 to 2/2023	9/2022 to 2/2023*	$63,764	$78,164*

**Additional scope required of project* ***Additional scope added by the client*

Approach to handling part-time staffing needs for smaller assignments.

KCI has the resources to adequately staff both large and smaller assignments. Staffing needs are addressed during our weekly scheduling meetings. Mr. Condron will meet with his team every Monday to discuss project schedules and staffing needs. During this meeting a two-week staffing plan is discussed and coordinated based on fluctuating project needs. Mr. Condron and his staff use P6 and Microsoft Project to track and monitor project schedules, budgets, and staffing. All project managers and project engineers are required to keep up-to-date individual project schedules for each of their assigned projects. During the staffing meeting, projects are discussed and schedules are updated individually. During the meetings, projects are prioritized and those projects requiring the most attention or with a rapidly approaching deadline will be staffed first. Essentially, these are working meetings where discussions are constantly flowing and evolving until a solid work plan is set in place and a framework developed for the two-week workload projection schedule.

During these meetings particular attention is also paid to individual staff utilization. With input from Mr. Condron, annual targets are established for each staff member's utilization percentage (project chargeable time vs. non-chargeable time). These target percentages are compared with actual efforts on a weekly basis and also discussed during the scheduling meetings. This is important because it ensures that staff members aren't being under- or over-utilized and also provides a solid foundation for determining future staffing needs within the group. Having the ability to review and compare targets that have been established using historical group data along with the actual workload and staffing usage provides the opportunity to react to staffing needs in a quicker and more proactive way.

Should one or more key personnel not be available to complete an assigned project, we will reallocate project responsibilities immediately within the survey team or pull from additional qualified personnel within the firm. Many of our surveyors have overlapping skill sets -including detailed knowledge of the local terrain and historical property records - that can be allocated based on project requirements. Each dedicated employee can work overtime to maintain project schedules. We will also hire additional part-time and/or full-time employees as needed to satisfy the project's goals. Biographic summaries of the assigned personnel are provided on the following pages.

KCI has over 40 years of delivering successful professional surveying services for Texas public and private sector clients. To provide exceptional survey services, the project team must prepare and deliver detailed work order plans, concisely communicate, gain the client's agreement on the deliverables, and be disciplined to monitor the progress of preparing and delivering the work product on time and within the agreed budget costs. Over many years of successful projects, KCI has realized that successful projects demand stringent controls to meet budgets, schedules, and deliverables.

TAB 4

STABILITY AND REFERENCES

REFERENCES

The KCI team is dedicated to providing quality, responsive services to the City. At KCI, we feel that the best measure of our performance is client satisfaction and our relationship with our clients. The client references below can attest to the performance of KCI and our key personnel. We encourage the City to discuss with these clients the capabilities of our firm and proposed staff members.

BILKIS OLAZARAN

City of McAllen
956.681.1151 // bolazaran@mcallen.net
Project name and brief description: Alley Rehab - This project included PS&E, utility coordination, and topographic survey for the rehabilitation of 26 alleys within the City of McAllen.

COMMISSIONER ELLIE TORRES

Hidalgo County Commissioner Precinct 4
956.381.0981 // ellie.torres@co.hidalgo.tx.us
Project name and brief description: North Main Drain III Phase I - KCI provided design survey services for the PS&E drainage design for this project. KCI completed research, field work, analysis, computation, and documentation necessary to complete a detailed topographic survey of the project site. Utilizing GPS, digital levels, and conventional survey equipment we located cross-sections, horizontal and vertical locations of utilities and improvements, and details of bridges and structures. We also reviewed right-of-way maps and established control points. KCI completed right of entry, right-of-way research, and deed and plat research.

OMAR CANO

Hidalgo County Drainage District No. 1
956.292.7080 // omar.cano@hcdd1.org
Project name and brief description: Faysville Drain - This project, part of the 2018 Hidalgo County Drainage District Bond Program, specifically aims at elevating flooding in Faysville and the surrounding residential areas West of US 83. We are performing hydrologic analysis and hydraulic design, authoring a Drainage Report, performing final preliminary and final design,producing final PS&E, and providing construction phase services.

COMMISSIONER EVERARDO "EVER" VILLARREAL

Hidalgo County Commissioner Precinct 3
956.585.4509 // everardo.villarreal@co.hidalgo.tx.us
Project name and brief description: Highway Safety Improvement Program - KCI provided traffic and safety studies in support of the submission of 13 project locations within Precinct 3. KCI identified the projects for consideration of funding via applicable programs and submit existing and proposed safety performance measures, preliminary proposed layouts, and preliminary construction cost estimates.

FINANCIAL STABILITY

KCI affirms that it has the financial capacity to perform the services required for this contract. Per our latest audited financial statements dated December 31, 2023, KCI Holdings, Inc.'s (parent company) revenue totaled $464M. KCI has $283M in assets with an equity balance of $152M. KCI currently has more than $13M in cash reserves plus investments, in addition to an unused line of credit of $20M.

KCI certifies it has adequate measures for the protection of the City, its agencies, and personnel for any and all forms of liability, errors, or omissions committed by us in our performance of this contract. KCI carries $2M each occurrence / $4M aggregate of general liability insurance, in addition to $10M per claim / $15M aggregate of professional liability coverage and $25M of umbrella coverage.

If you need more detail or further clarification, please contact Christine Koski, VP-CFO at (410) 891-1733.

LITIGATION AND CLAIMS SUMMARY

REQUIRED FORMS

CONFLICT OF INTEREST FORM

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

N/A

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

CONFLICT OF INTEREST DISCLOSURE

CONFLICT OF INTEREST

DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

CONFLICT OF INTEREST DISCLOSURE

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☒ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

LITIGATION DISCLOSURE FORM

LITIGATION DISCLOSURE FORM

Failure to fully and truthfully disclose the information required by this Litigation Disclosure form may result in the disqualification of your submittal from consideration or termination of the contract, once awarded.

1. Have you or any member of your Firm or Team to be assigned to this engagement ever been indicted or convicted of a felony or misdemeanor greater than a Class C in the last five (5) years?

   Circle One YES (NO)

   1 Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

   Circle One (YES) NO

3. Have you or any member of your Firm or Team to be assigned to this engagement ever been involved in any claim or litigation with the CITY or any other Federal, State or Local Government, or Private Entity during the last ten (10) years?

   Circle One (YES) NO

If you have answered "Yes" to any of the above questions, please indicate the name(s) of the person(s), the nature, and the status and/or outcome of the information, indictment, conviction, termination, claim or litigation, as applicable. Any such information should be provided on a separate page, attached to this form and submitted with your submittal.

LITIGATION DISCLOSURE FORM

Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

To date, KCI has knowledge of three circumstances in which our contract was terminated for convenience. One contract was terminated because the owner's right-of-way (ROW) requirements did not align with the design requirements. The owner and KCI separated without formal dispute, and the owner proceeded with the project with a different consultant. A second contract was terminated shortly after KCI acquired a firm in litigation. The last known instance of contract termination occurred when the owner discontinued the project due to changes in Federal regulations related to compliance with the Clean Water Act, which required additional work that would increase both design and construction costs.

LITIGATION DISCLOSURE FORM

10 YEAR LITIGATION SUMMARY – OPEN AND CLOSED – PROFESSIONAL

- **Core Logistic Services, LLC vs. LaSalle County / Don Durden, Inc., DBA Civil Engineering Consultants (CEC)**
  Jurisdiction: LaSalle County, Texas
  Opened: September 2014
  Closed: September 19, 2017 – Motion for Summary Judgment granted

  This was a breach of contract between the owner, La Salle County, and its contractor, Core Logistics. Core Logistics attempted to join CEC claiming CEC tortiously interfered with Core's ability to be paid by the County.

- **ICG 16th Street Associates LLC Asserts Claim against KCI Technologies, Inc.**
  Case No: 17-CV-1070 (CRC)
  Jurisdiction: U.S. District Court, District of Columbia
  Opened: January 2015
  Closed: August 2020 – Settled

  This was a property claim dispute in which ICG alleged that a neighboring property (owned by an affiliate of ICG) was encroaching onto their property by more than the original KCI prepared survey showed. ICG claimed there was a defect caused by an error in the survey done by KCI.

- **SummitIG, LLC vs. PEI Engineering & Construction, LLC (PEI) / KCI Technologies, Inc. [KCI Technologies named, but should be KCI Construction Services LLC]**
  Case No: 101283
  Jurisdiction: Circuit Court for the County of Loudoun, Virginia
  Opened: May 2016
  Closed: September 2019

  This was a property damage claim filed by SummitIG, a public service company providing telecommunications services throughout Virginia. PEI, a subcontractor to KCI, damaged SummitIG's conduit and fiber while performing excavation services. PEI claimed the plaintiff, SummitIG, was responsible for incorrectly marking SummitIG's facilities location.

- **The Helga R. Shay Revocable Trust, etc., PLTIF vs. March-Westin Company, Inc. / DFTS / KCI Technologies, Inc. / et al**
  Case No: 18-C-64
  Jurisdiction: Monongalia County, Circuit County, West Virginia
  Opened: July 2018
  Closed: August 2019– Settled

  WVU College Park project was a fast-paced multi-building student housing project. Retaining wall on site had slipped and caused impact to properties below the wall. KCI did not design the retaining wall and was not the geotechnical engineer. KCI also did not approve the retaining wall shop drawings/calculations.

As of May 2024

LITIGATION DISCLOSURE FORM

- **Alexander D. Kunkel vs. Alexander D. Kunkel vs. J.D. Eckman, Inc. / Ford Motor Company / Meaghan Peltier / Robert Talia / Established Traffic Control, Inc. / KCI Technologies, Inc. / Brian Leslie Watkins, PE / Pennsylvania Department of Transportation (PENNDOT) / Bridgestone Americas, Inc.**
  Case No: 2020-00200
  Jurisdiction: Court of Common Pleas Philadelphia County
  Opened: November 2018
  Closed: Ongoing

  Plaintiff was a passenger in a car with six other occupants and half of the passengers were not wearing seatbelts. The driver wrecked the vehicle which overturned and landed on the roof. The plaintiff received multiple injuries including permanent paralysis from the waist down. The accident occurred in a traffic work zone designed by KCI. The driver plead guilty to recklessly endangering another person in addition to other related offenses. KCI was a sub consultant to URS Corporation (now AECOM) for this project.

- **Jesco, Inc. vs. KCI Technologies, Inc.**
  Case No: C-08-CV-18-001151
  Jurisdiction: Circuit Court for Charles County, Maryland
  Opened: November 2018
  Closed: February 2021 – Settled

  Jesco entered into an agreement to purchase a property with the intent of constructing a two-story commercial building, parking areas, and access roads. KCI performed limited geotechnical investigations for Jesco. Based on KCI's findings, Jesco purchased the property. Jesco claimed there were defects and faults in the report and that Jesco incurred losses, costs and expenses as a result.

- **Chasity Jackson & Chris Jackson, et al vs. Metropolitan Government of Nashville & Davidson County, Tennessee / KCI Technologies, Inc. / Stansell Electric Company**
  Case No: 19C-725
  Jurisdiction: Circuit Court of Davidson County Twentieth Judicial District of Tennessee, Twentieth Judicial District of Tennessee
  Opened: February 2020
  Closed: November 2020 – Settled

  Chasity Jackson passed through an intersection and her car ran over the edge of a concrete median that had been recently constructed. The island was alleged to not have been constructed in accordance with KCI's design.

- **George Powell vs. City of San Marcos / 2202 Hunter Road Inv. LP / Don Durden, Inc., DBA Civil Engineering Consultants (CEC)**
  Case No: 19-3078
  Jurisdiction: San Marcos, Texas
  Opened: April 2020
  Closed: December 2022 – Settled

As of May 2024

LITIGATION DISCLOSURE FORM

This claim alleged negligence on the part of CEC as well as the other defendants. Plaintiff claimed the design of a detention pond caused flooding and damage to his property.

- **Jennifer Nicole Moon, Individually and as Administrator of the Estate of Gregory Moon, Deceased, et al vs. Pittman Construction Company / Middle Georgia Paving, Inc / KCI Technologies, Inc. / Georgia Department of Transportation**
  Case No: 20CV0399
  Jurisdiction: Superior Court of Jackson County, Georgia
  Opened: June 2020
  Closed: November 2021 – Settled

  The claim alleged wrongful death of Gregory Moon who was driving his motorcycle through a construction zone in the early morning of June 7, 2018. When attempting to change lanes, Mr. Moon's motorcycle allegedly hit steep uneven pavement causing him to lose control. Mr. Moon later succumbed to his injuries. KCI was hired by GDOT to perform inspection and supervisory work on this paving project.

- **Ronald Thomas and Tamara Thomas vs. South Carolina Department of Transportation, et al**
  Case No: 2019CP3201072
  Jurisdiction: State of South Carolina, County of Lexington
  Opened: November 2020
  Closed: January 2021 – Dismissed

  The claim alleged personal injury resulting from a failure to maintain the project site in a safe condition. The Plaintiffs were driving their motorcycle in a construction zone on May 19, 2017. The allegation was that while changing lanes, the Plaintiffs struck uneven paymentcausing them to lose control of the motorcycle and wreck. KCI was hired by SCDOT to perform inspection services.

- **Susan Galloway, Personal Representative of the Estate of William Andrew Galloway, Deceased vs. Blythe Construction, Inc. / Stay Alert Safety Services, Inc. / South Carolina Department of Transportation / KCI Technologies, Inc. / Infrastructure Consulting & Engineering**
  Case No: 2019-CP-42-04336
  Jurisdiction: State of South Carolina, County of Spartanburg
  Opened: December 2020
  Closed: January 2023 – Dismissed

  The claim was based on a fatal car accident that occurred on December14, 2017. The claim alleged that due to limited visibility created by the contours of the road and lack of signage warning of a construction zone, Mr. Galloway was unaware that traffic was stopped ahead and was, therefore, unable to stop to avoid colliding with a stopped vehicle directly ahead of him. KCI was hired by SCDOT to perform inspection services.

- **Edward Zambito and Linda Zambito, both Individually and as the Co-Executors of the**

As of May 2024

LITIGATION DISCLOSURE FORM

Estate of Allie Rose Zambito, Deceased vs. A-Del Construction Co, Inc. / Jonas Stoltzfus t/a Stoltzfus Meats & Deli / Neal Toros / KCI Technologies, Inc.
Case No: 210600429
Jurisdiction: Court of Common Pleas Philadelphia County
Opened: November 2021
Closed: August 2023 – Dismissed

The claim was based on a fatal accident that occurred when a pedestrian was attempting to cross at an intersection under construction in the evening on June 21, 2019. The intersection did not have a sidewalk and construction barriers were in place. KCI was hired by DelDOT to perform inspection services.

- **Shelton Powell v. Sheldon Miner / Mumford and Miller Concrete, Inc. / KCI Technologies, Inc.**
  Case No: N20C-12-149 MMJ
  Jurisdiction: In the Superior Court of the State of Delaware
  Opened: November 2021
  Closed: July 2023 – Motion for Summary Judgment granted

  Plaintiff was a passenger in a vehicle traveling through a construction zone on December 17, 2019. The vehicle allegedly drove through mud on the road causing the vehicle to crash, thereby, injuring the passenger. KCI was hired by DelDOT to perform inspection services.

- **Richard A. Brinkley v. Sheldon Miner / KCI Technologies, Inc.**
  Case No: N21C-11-115 VLM
  Jurisdiction: In the Superior Court of the State of Delaware
  Opened: April 2022
  Closed: June 2023 – Dismissed

  Plaintiff was an employee of Mumford and Miller Concrete, Inc., working at a project site when he was allegedly struck by a vehicle driven negligently by Sheldon Miner on December 17, 2019. KCI was hired by DelDOT to perform inspection services.

- **UC Athletic, LLC v. McMillan Pazdan Smith, LLC / KCI Associates of North Carolina, P.A.**
  Case No: 2021-CP-46-02683
  Jurisdiction: State of South Carolina, County of York
  Opened: September 2022
  Closed: Ongoing

  Plaintiff is a developer who hired the architect, McMillan Pazdan Smith who contracted with KCI for certain structural design services. UCA alleges a breach of duty of care and implied warranty against KCI.

- **Arthur Lee Adams, Jr. as Personal Representative of the Estate of Pamela Adams Powell v. SC DOT / Zachary Construction Corp. / Michael Baker International, Inc. / KCI / et al.**

As of May 2024

LITIGATION DISCLOSURE FORM

Case No: C.A. No: 2022-CP-32-00121
Jurisdiction: State of South Carolina, County of Lexington
Opened: February 2023
Closed: April 2024 - Settled

This litigation involves a fatality on I-20 of when a car was traveling on the shoulder of the highway as part of the maintenance of traffic pattern and a tree fell on the decedent's car during a high wind event. The accident occurred within the limits of the I-20 widening project and KCI was providing construction engineering and inspection services.

- **Victor Hans Santillana v. State of Florida Department of Transportation / Asphalt Group, Inc. / KCI Technologies, Inc.**
  Case No: 2023-CA-000688-0001-XX
  Jurisdiction: Circuit Court of the 20th Judicial Circuit, Collier County, Florida
  Opened: September 2023
  Closed: March 2024 – Settled

  Plaintiff crashed his motorcycle as he changed lanes from one lane that had been milled for repaving and the other lane that had not yet been milled. KCI was performing inspection services on behalf of the Florida Department of Transportation for the repaving project.

- **Novanetto, LLC dba Prose Nails Riverwalk / Dolores Novak / Andrea Fascinetto v. R Jordan Design Group, LLC dba The Jordan Group / KCI Technologies, Inc. / Jack Laurence Corporation**
  Case No: 2023CI21293
  Jurisdiction: 57th District Court, Bexar County, Texas
  Opened: October 2023
  Closed: Ongoing

  Plaintiff is a tenant of a building and hired an interior design firm for the design of the leased space where a nail salon was to be located. The interior design firm subcontracted with KCI for certain mechanical engineering and design services. Plaintiff alleges negligence in the provision of mechanical engineering duties.

- **Estate of Widmann, Jr. and David J. Widmann, Sr. v. Rondell Bradley / PennDOT / Bristol Township / URS Corporation / AECOM Technical Services, Inc. / KCI Technologies, Inc.**
  Case No: 2022-05562
  Jurisdiction: Court of Common Pleas of Buck County, Pennsylvania
  Opened: December 2023
  Closed: Ongoing

  This litigation involves a 2022 motorcycle accident on Bristol Pike in Bristol, PA. The accident occurred when the driver of an SUV turned left over double solid yellow lines and contrary to posted no-left turn signs and struck the motorcycle traveling toward him. Bristol Pike underwent reconstruction in the vicinity of the accident between 2013 and 2016, and KCI was a subconsultant to URS Corporation (now AECOM) as part of the design of that project.

As of May 2024

LITIGATION DISCLOSURE FORM

- **Matthew P. Pinckney v. Tommy W. Welch dba Tommy Welch Livestock / Tommy Bradley Welch dba TBW Cattle / Cary A. Fields / South Carolina Department of Transportation / Blythe Construction, Inc. / Zachry Construction Corporation / Blythe Construction Inc. - Zachry Construction Corporation, a Joint Venture / KCI Technologies, Inc. / Infrastructure, Consulting & Engineering, PLLC / Johnson, Mirmiran and Thompson, Inc.**
  Case No: 2023-CP-11-00031
  Jurisdiction: State of South Carolina, Court of Common Pleas for the Seventh Judicial Circuit
  Opened: February 2024
  Closed: Ongoing

  The litigation is based on a car crash that occurred on March 3, 2021, whereby Plaintiff was stopped in traffic and struck from behind by a tractor trailer within the construction zone of the I-85 widening project. KCI was performing inspection services under a contract with South Carolina Department of Transportation.

SENATE BILL 19 VERIFICATION

I, Dawn Green, PE, the undersigned representative of

KCI Technologies, Inc., (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*

   a) *means, with respect to the entity or association, to:*

      i) *refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*

      ii) *refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*

      iii) *terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*

   b) *does not include:*

      (i) *the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*

      (ii) *a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*

         (aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

SENATE BILL 19 VERIFICATION

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*

   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*

   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earnings inures to the benefit of any private shareholder or individual;*

   b) *has two or more firearm entities as members; and*

   c) *is exempt from federal income taxation under Section 501(a), Internal Revenue Code of 1986, as an organization described by Section 501(c) of that code.*

Established In 1947
Edinburg, Texas

Transmittal Letter

July 15, 2024

Mr. Mardoqueo Hinojosa, P.E., C.F.M., C.P.M.
City Engineer
City of Edinburg
415 W. University Drive
Edinburg, Texas 78541

Ref: Request for Qualifications for Land Surveying Services Rotation
RFQ No. 2024-7

Dear Mr. Hinojosa,

The management and professional staff of **Melden & Hunt, Inc.** would like to present you with our Statement of Qualifications to provide Professional Land Surveying Services to the City of Edinburg. Our objective in submitting this Statement of Qualifications is to show you that our firm should be selected as a consultant for your professional service needs.

Melden & Hunt, Inc. has a proven track record of delivering top-quality water, utility and roadway infrastructure projects on schedule, within budget, and tailored to the unique needs of each client. As a multi-disciplinary consulting firm, we specialize in civil engineering and land surveying services. Our clients include federal and state government agencies, local municipalities, school districts, irrigation districts, water utility districts, gas companies, and numerous private sector developers throughout the South Texas region.

We are proud to offer our clients unparalleled expertise and a diverse range of professional talent, difficult to match anywhere. Our team includes over 60 engineers, surveyors, project managers, field inspectors, CADD designers, survey technicians, and administrative support personnel based in our Edinburg office. Given our current workload, we are well-positioned to provide the City of Edinburg with the resources needed to rapidly deploy and meet an aggressive project schedule for land surveying rotation needs.

At Melden & Hunt, Inc., we prioritize effective communication. We emphasize close coordination with our clients to ensure their objectives are met. This process typically involves comprehensive information gathering and client involvement at all levels, from operations to management. We then evaluate and select the best systems, considering the unique conditions of each client and project, along with technical, economic, environmental, and political concerns.

Selecting Melden & Hunt, Inc. offers the City of Edinburg several distinct advantages:

- A firm with tremendous engineering experience.
- A firm with the capability to perform all aspects of municipal projects.
- A firm with a strong reputation, professional integrity and competence.
- A firm with the professional background and understanding of working with the City.

- A firm with the technical resources and expertise to meet an aggressive project schedule.
- A firm who is truly local and is extremely familiar with the geographical area.
- A firm with an intensive focus on maintaining a valuable relationship with the City.

We look forward to the opportunity to working with the City of Edinburg, once again. If our firm is selected, I will serve as your Project Principal/Land Surveyor. All project coordination and related functions will be managed through my office and staff. My personal relationship with you and your team, combined with the full resources and talents of Melden & Hunt, Inc., will ensure timely project progress and success.

For specific communication for this RFQ, contracting details, or contract binding please feel free to reach out to myself or Mike L. Hernandez, Vice-President, his contact details are below. We are both authorized agents of the firm, empowered to respond to RFQs, negotiate and bind contracts. Also, please note that we have not received any addendums to this RFQ.

In closing, I would like to thank you for the opportunity to submit this qualification packet. We are excited about the City's upcoming award of land surveying services rotation contracts. And I am confident that Melden & Hunt, Inc. can provide the land surveying services that will best meet your needs and exceed your expectations. If you have any questions or comments, please feel free to contact me at 956.381.0981.

Sincerely,

Ruben James De Jesus, P.E., R.P.L.S.
Vice-President

Firm Information, Qualifications & Experience Continued

Melden & Hunt, Inc. (MHI) was established in 1947 and has provided engineering and surveying services throughout the Rio Grande Valley-South Texas area for 77-years. Melden & Hunt, Inc. is one of the largest local engineering consulting firms in the Rio Grande Valley. Our clients have the benefit of decades of engineering surveying experience in a wide range of technical disciplines. Since MHI clients generally have distinct needs, we offer a wide range of engineering services including highway, right-of-way, waterworks, environmental, drainage, irrigation and structural engineering, surveying, street, bridge, utilities, water and wastewater treatment plant design.

Melden & Hunt, Inc. has assembled a project team of engineering and surveying professionals with the proven experience to efficiently and successfully complete and submit the services requested by the City of Edinburg. These representatives are all full-time members of Melden & Hunt, Inc. staff. Not only does this team bring to the project the professional background for completing projects of your nature, but this team also possesses the relationship and experience of working with TXDOT, HCID No. 1, HCDD No. 1, Texas Gas Service, American Electric Power, Time Warner Cable, AT&T and other utilities that impact your projects. Our team of professionals will work out of our Edinburg office to serve as our base of operations and will actively participate in any questions and/or consultation requested by the City of Edinburg.

With a well-equipped office in ***Edinburg, Texas*** this permits us to respond to the City's needs quickly, and easily access any area in the city limits within minutes. And due to our staffing size of over 60 professionals, and our typical workload, along with Mr. Ruben James De Jesus, P.E., R.P.L.S., Vice-President as the City's Project Principal we are ***not concerned about handling any part-time staffing needs for smaller projects, as your assigned team is all full-time. And our volume of projects is set low enough to be able to handle rotation services to clients like the City of Edinburg.***

Firm Information, Qualifications & Experience Continued

Since Melden & Hunt, Inc. clients generally have distinct needs, we offer a wide range of engineering and surveying services listed below, but not limited to:

Civil Engineering	Land Planning	Water & Wastewater
Bridges	Commercial Development	Odor Control
Capital Improvements Planning	Commercial Facilities	Pumping Facilities
Drainage & Storm Sewer	Industrial Development	Sewer System Evaluation
Environmental Site Assessments	Industrial Facilities	Sewer System Rehabilitation
Feasibility Studies	Institutional Facilities	Water System Evaluation
Irrigation	Multi-Use Development	Water System Rehabilitation
Park Planning & Design	Master Planning	Wastewater Treatment Plants
Paving Design	Residential Development	Wastewater Collection Systems
Roads & Streets	Zoning	Water Treatment Plants
Sanitary Sewer		Water Distribution Systems
Site Grading and Drainage		
Site Planning		
Structural Inspections		
Transportation	**Environmental**	**Surveying & Mapping**
Bicycle & Pedestrian Facility Development	Assessments & Audits	As-Built Survey
Minor Roadway Design	Corrective Action	ALTA Survey
Major Roadway Design	Environmental Protection Plans	Boundary Survey
Minor Bridge Design	Geotechnical Investigations	Construction Staking
Roadway Construction Management	Litigation Assistance/Support	Design & Construction Survey
Roadway Construction Inspection	Natural Resource Management	Geographic Information Systems
Traffic Engineering Studies	Pollution Prevention Plans	Horizontal & Vertical Control-Aerial Mapping
Transportation Planning & Design	Recycling & Resource Reuse	Improvement Plats
	Regulatory Compliance	Investigative Survey
	Site Investigations Ph. I & II ESA	Land Title Survey
	Sediment Detention Control	Legal Descriptions
	Solid Waste Management	Loan Plats
	Soil/Water Sampling Plans	Location Survey
		Metes and Bounds Descriptions
		Parcel Plat Surveys
		Parcel Sketches
		Realtime & Static GPS
		Ranch Surveys
		Right-of-Way Survey
		Route Survey
		Standard Survey
		Topographic Survey

As you can see, Melden & Hunt, Inc. is a diversified company with a broad range and depth of expertise in a variety of specialty areas that give us major project capabilities. Unlike many, Melden & Hunt, Inc. has the flexibility to adapt our resources from large multi-million-dollar projects to typical day-to-day engineering and surveying

With the depth and resources of a large local firm, complemented by our close-knit team of experienced professionals, Melden & Hunt, Inc. is highly regarded by its clients and among its peers in the civil engineering and surveying field as one of the finest.

Firm Information, Qualifications & Experience Continued

Melden & Hunt, Inc. uses the latest technology and equipment to accomplish its project work. Our staff is each provided a computer and has access to the information technology network to conduct ongoing business. Our computers are upgraded to the latest current standards in technology on an annual basis. In addition, Melden & Hunt, Inc. owns much of the equipment that is required to do fieldwork projects. However, we do have vendors with which we have established long term relationships that routinely supply equipment that either we do not own or that is required to meet an unusually restrictive schedule.

Melden & Hunt, Inc. maintains an extensive CADD and GPS System with dedicated workstations used to produce all of our design work. We maintain Autodesk Civil 3D, Bentley WaterCAD, Bentley SewerCAD, Bentley MicroStation and ESRI ARCView licenses. CAD applications are supported MS Windows (all versions) and can be easily upgraded to any platform. Our office is networked through high-speed communication lines that allow integrated file sharing, plotting and data management.

With internet access at your fingertips, Smartphone's and iPad's have opened a new and exciting opportunity for cost effective communication. Melden & Hunt's web site (WWW.MELDENANDHUNT.COM) will serve as a communication hub for the City of Edinburg. The site will allow representatives of the city to communicate with Melden & Hunt, Inc., download or view reports, drawings, schedules, project photos, budgets, schedule project meetings to name a few. We have effectively used our web site for clients such as City of Mission, City of Hidalgo, City of Elsa, North Alamo Water Supply Corporation, Texas Gas Service and others.

The following displays Melden & Hunt's equipment resources, and it is safe to say that this equipment allows us to get the job done professionally and effectively:

Computer Hardware
We have 15 CAD setups which include:
Dual 20" Monitors
Computer Software
Windows Professional 64 Bit
Microsoft Office 365 64 Bit
AutoDesk Civil 3D 2020 64 Bit
Bentley WaterCad
Bentley SewerCad
Bentley MicroStation
ESRI Arcview

Firm Information, Qualifications & Experience Continued

At Melden & Hunt, Inc., we believe that any proposed infrastructure project must be constructed so as to assure the most efficient utilization of resources such as, money, materials, energy, and work force in meeting the project goals. Melden & Hunt, Inc. uses a team of experienced professionals working under the direction of a Project Manager. Melden & Hunt, Inc. fully expects to coordinate and communicate its activities on the project with the City of Edinburg to ensure the requirements of the project are met now and in future development, and to assure the City that project completion will be on a cost effective and timely basis. Each phase of the project will require detailed analysis to effectively engineer solutions for the proposed improvements. Alternatives will be developed which take advantage of specific strengths and minimize problem areas.

After the City staff input, the best alternative will be selected and developed into plans and specifications. Melden & Hunt, Inc. will work closely with the City of Edinburg in coordination of project design to meet their standards.

Melden & Hunt, Inc. has completed many rural utility projects and is experienced in the necessary coordination between the governmental entities, affected property owners, utilities, cable companies, telephone companies, power companies, and the Texas Department of Transportation, drainage and irrigation districts. A successful project depends on the entire engineer's attention to detail to assure project goals are achieved and citizen's needs are met.

Therefore, Melden & Hunt, Inc. has developed a Work Program that takes advantage of our experience with existing conditions, recent improvements, and familiarization with the project area.

The Work Program is as follows:

I. ANALYSIS

A. Utility Staff Coordination and Input
B. Existing Conditions Research
C. Future Improvements Consideration
D. Concept

II. ALTERNATIVE DESIGN

A. Preliminary Field Work
B. Development of Alternatives
C. Utility Staff Review
D. Cost Guidelines

III. FINAL DESIGN

A. Construction Documents (Plans, Specifications, Estimates)
B. Permits and Approvals
C. Right-of-Way Plats and Descriptions

IV. CONSTRUCTION ADMINISTRATION

A. Routine Inspection
B. "As-Built" Drawings

Firm Information, Qualifications & Experience Continued

Melden & Hunt, Inc. believes this project should be conducted in four distinct phases: **Phase 1** - Preliminary Design, **Phase 2** – Final Design, **Phase 3** - Construction and **Phase 4** - Post Construction.

The following is an outline of the scope of work that we will perform on this project:

Phase 1 - Preliminary Design

The purpose of preliminary design is to establish current and future infrastructure requirements. During this phase we can help the City establish various alternatives and plans for meeting existing and anticipated needs within the scope of the project. Melden & Hunt, Inc. will work closely with staff in this planning effort, which will culminate in the preparation of a preliminary design report summarizing and presenting the selective alternative in detail.

Phase 2 – Design

The purpose of this phase of the project is to prepare the necessary construction drawings and specifications, bidding documents, cost estimates and schedules required constructing the proposed improvements. Further, Melden & Hunt, Inc. will assist the City in bid analysis and make recommendations regarding the bid award. We will use computer-aided drafting and design throughout the project.

Phase 3 – Construction

The firm will provide conventional services during each construction contract comprising the project. The services will include general services during construction, resident project representation (if requested), and preparation of record drawings. General services during construction will include but not necessarily be limited to:

1. Notice to Proceed.
2. Conduct pre-construction meetings.
3. Regular inspections to review the progress and character of the work being accomplished.
4. Provide for testing of construction materials.
5. Review periodic payment estimates of the contractor for completed work.
6. Review and approve shop drawings and any necessary change orders.
7. Provide interpretation of the plans and specifications and contract requirements required.
8. Provide guidance to onsite representatives observing the daily progress and construction activities.
9. Conduct regular progress review meetings with contractor and owner.
10. Provide as built or as constructed drawings of the complete facilities.
11. Provide any other related services associated with the engineers' design as applied to construction progress and as required by the owner.

Phase 4 - Post Construction

Upon acceptance of the construction contracts, Melden & Hunt, Inc. will provide all professional services necessary to assist the City of Edinburg with placing the industrial park in operation. We will assist the City in evaluating the performance of the facilities and will represent the City in warranty disputes.

Wastewater Water Treatment Plant Lift Station and Headworks Structure Phase II
Wastewater Water Treatment Plant Carousel, Clarifiers, UV System and Belt Press III

Services Performed: Planning, Design, Bidding, and Construction Administration

Project Funding:	Phase II – TWDB - CWSRF
	Phase III – Self-funded
Total Project Cost:	Phase II - $5,850,000
	Phase III - $14,322,900
Project Date:	Phase II –August 2008 thru December 2011
	Phase III – February 2010 thru October 2013

Project Description Phase II: This project provided for certain improvements to the wastewater treatment plant, The project included construction of a new plant lift station, new headworks station (screening, degritting, flow division, flow measurement functions), and other miscellaneous appurtenances and yard piping necessary to connect to existing treatment facilities. The construction cost was $5,386,537. (Finalized and Constructed)

Project Description Phase III: This project provided for a 5.6 MGD expansion to the treatment capacity of the plant. The project included the construction of a carrousel aeration basin, two clarifiers, a return and waste activated sludge pumps station, parshall flume flow measurement, ultraviolet light disinfection system, post aeration system, solids processing building with a 2-meter belt filter press, and other miscellaneous improvements necessary to consolidate the existing plant with the new additions. The construction cost was $13,336,000. (Finalized and Constructed)

Team Member Qualifications & Experience

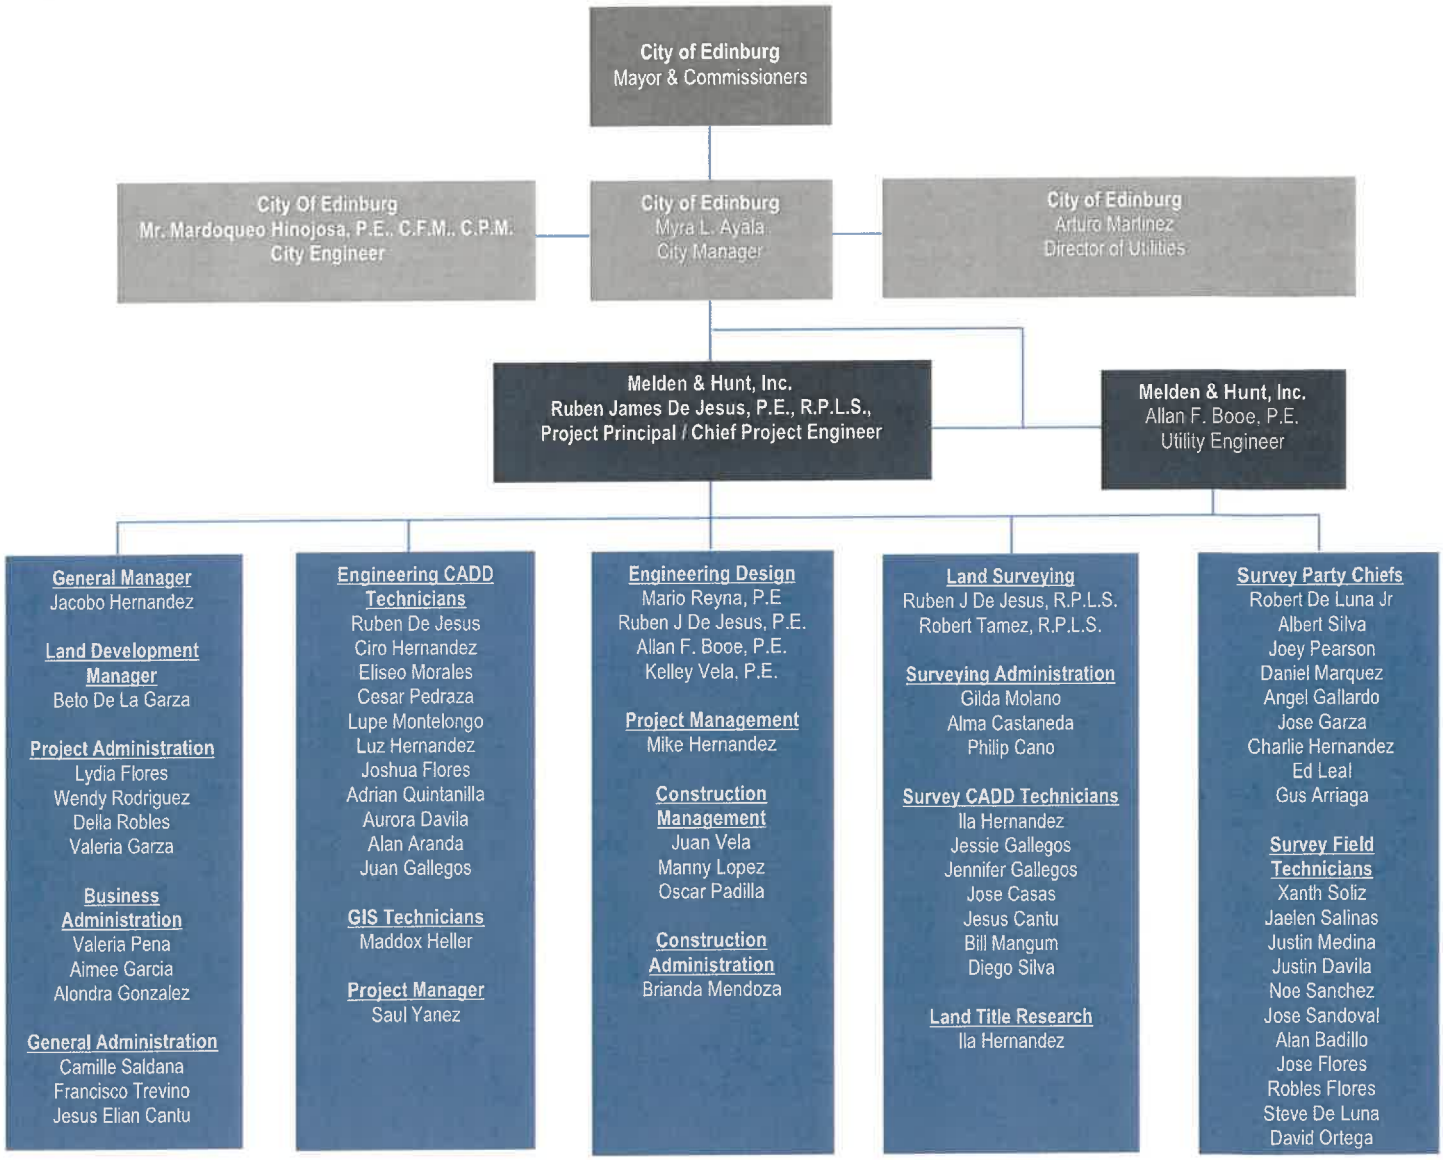
OUR INSIGHT. YOUR SUCCESS.

Melden & Hunt, Inc. has assembled a team of professionals who have the requisite interest, skills, and time to ensure timely and successful completion of your engineering projects with the highest quality. Melden & Hunt, Inc. can assure the City of Edinburg that key personnel indicated in this qualification statement will maintain their role from start to finish.

Melden & Hunt has a very flexible team with a lot of depth. We will draw on our team's resources to provide the staff described plus any additional resources required for completing any assignment issued to us. Our workload capacity far exceeds the project requirements and Melden & Hunt, Inc. typically operates at around 65%-70% of our total workload capacity. The workload backlog varies from month to month but Melden & Hunt, Inc. has plenty of capacity to get the job done. Your projects will be adsorbed in our normal business cycle and will not have a measurable impact on our percentage of capacity (65%-70%) throughout the duration of a one- or two-year contract. While we enjoy a healthy backlog of work; moreover, we have more than enough capacity to complete this project on time and still meet any existing or unknown future assignments.

Further, we want the City of Edinburg to understand that the high quality of Melden & Hunt's work depends directly on the competence and capabilities of individual professionals and the blending of their talents to meet specific project requirements. The level of capability of this company allows us to complete the work correctly the first time and maintain schedule and budget by avoiding costly and time-consuming re-evaluations to mitigate omissions or oversights.

As mentioned, Melden & Hunt, Inc. has 60 full time professionals in our Edinburg and Rio Grande City office to actively participate in any questions and/or consultation requested by the City. Consequently, Melden & Hunt, Inc. has the personnel to assure that adequate replacements are available during periods of sickness, attrition, or increased workload.



As mentioned, Melden & Hunt, Inc. will perform the majority of all engineering tasks requested by the city and will work out of our Edinburg office. Should the City of Edinburg feel the need for the use of the mentioned sub-consultant we will utilize them at your request. For now, all civil engineering task will be performed by Melden & Hunt, Inc. and our workload capacity far exceeds the project requirements.

Team Member Qualifications & Experience

Our proposed Project Organization is shown below. Our team is led by Ruben James De Jesus, P.E., R.P.L.S., and **Project Principal/Chief Project Engineer**. Mr. De Jesus is one of the most seasoned engineers in the Rio Grande Valley with over 12 years of engineering and surveying experience. The given organizational chart shows other key professionals that will have responsibility for individual project tasks. All of these individuals will report up through Mr. De Jesus who will hold management and decision-making responsibility for this project. As mentioned before, Mr. De Jesus will be responsible for committing the human and equipment resources required to successfully meet the city's schedule and needs.

Organizational Chart:

Mr. De Jesus, started his civi engineering career at Melden & Hunt, Inc. after graduating from the University of Texas at Pan American. He has designed and managed many types of Civil Engineering projects and has extensive background in surveying. He has been responsible for studies, designs and management of public and private sector projects throughout the South Texas region. He is proficient in scheduling and coordinating large public and private projects and has worked on a wide range of federal, state and local infrastructure projects.

As a Lead Engineer, Mr. De Jesus will develop a work plan and be responsible for scheduling and performance of all work associated with this proposed project. He will function as an extension of your staff to exceed your performance objectives and to respond to your needs on short notices. He is also committed to engaging all the necessary resources to expedite this proposed project. He will work out of our Edinburg office to serve as our base of operations and will actively participate in any questions and/or consultation requested by the District.

Mr. Booe, has extensive experience in the design, maintenance, and operation of water and wastewater treatment plants and their related appurtenances. He specializes in the engineering design and management of Melden & Hunt's water and wastewater utility projects.

What is more, he has over forty-five (45) years of engineering experience primarily with treatment plants, water distribution and sewer collection systems.

He served as Utilities Director for McAllen Public Utility for four (4) years. He has been the chief engineer on the design and construction of numerous water and wastewater treatment plant projects throughout his career including Mission's North Water Treatment Plant, Edinburg's West Water Treatment Plant, North Alamo's Delta Regional Water Treatment Plant, Mission's Wastewater Treatment Plant, Hidalgo's Wastewater Treatment Plant, Rio Grande City Wastewater Treatment Plant, Elsa's Wastewater Treatment Plant and North Alamo's Wastewater Treatment Plant. His experience includes a wide variety of projects including rehabilitation, expansion and new construction.

More important, Mr. Booe has been successful in obtain funding for many of these projects using the Texas Water Development Board and USDA Rural Development.

Mr. Hernandez's professional career started with Melden & Hunt, Inc. as a project manger twenty-two years ago. He is responsible for the supervision of water, wastewater, irrigation, and various other civil design projects. His primary focus is to provide the utmost satisfaction to the client, ensuring projects are complete with the allocated period or time and within the budget that has been assigned.

He operated under a certain degree of automy using engineering staff and resources allocated to him to provide top quality service to the client.

Mr. Hernandez's water and wastewater project managment experience has been with the North Alamo Water Supply Corporation where he was part of a design team preparing plans and specifications for the expansion to the Delta Regional Water Treatment Plant and Water Distribution System, Victorias Road Water Treatment Plant, North Weslaco EDAP Colonias Sewer Treatment Plant and Collection System. In addtion, he was part of a second design team who worked on the expansion to City of Mission Sewer Treatment Plant.

Mr. Montelongo has over 45 years of diversified engineering experience. His career has touched virtually every facet of water and wastewater systems, land development, surveying, transportation and public works projects. His experience includes design and construction inspection, administration and documentation. He is proficient in scheduling and coordinating public and private project and has worked with a wide range of federal, state and local infrastructure projects. In addition, he assists project engineers administer projects during the design, bid and construction. He makes review of all shop drawing and works with the contractors on the interpretation of drawings.

Furthermore, Mr. Montelongo is particularly strong in his knowledge of electrical, instrumentation, and control systems. In addition to his talents as a design and construction inspector, Mr. Montelongo is also a certified water and wastewater treatment plant operator, so his vision and efforts are consistent with operating personnel.

OUR INSIGHT. YOUR SUCCESS.

Melden & Hunt, Inc. has always respected and valued our relationships with our clients. Our founders, Charles Melden and Raymond Hunt, believed in "firm but fair" dealings with our clients by recognizing their needs and resource constraints. This philosophy continues today. Furthermore, Melden & Hunt, Inc. is proud of the fact that a large percentage of our work is repeat business from satisfied clients. This reflects our philosophy of keeping our clients satisfied with the quality of our work and our responsiveness to their individual needs.

For this proposal we encourage you contact our clients and ask them how they feel about our performance.

Military Parkway Roadway and Drainage Improvement Project - City of Mission & Hidalgo County

Client: City of Mission & Hidalgo County
Contact Person: Mike Perez, City Manager
Telephone: 956.580.8650
Location: Mission, Texas

Professional Services: Planning, Environmental, Right-of-Way Acquisition, Surveying, Design Phase Service, Bid Phase Services, Construction Administration and Inspection.

Melden & Hunt, Inc. was hired by the City of Mission to plan, design and construct Military Parkway being a 3.5-mile, 150.0-foot road right-of-way located south of Mission beginning on Bates Road and ending on Inspiration Road. Total Cost for the project amounted to approximately $2 million.

As part of Bentsen Palm Development, Military Parkway was also created for the initial corridor of the Hidalgo County Southwest Loop for which it has been adopted by the Hidalgo County Metropolitan Planning Organization.

The project consisted of designing and constructing a 4-lane divided highway to serve as major east-west thoroughfare in the City of Mission, as well as access to the Anzalduas International Bridge. Currently the north bound lane is constructed and being used as a 2-lane rural roadway. The south bound lane will be constructed during the construction of the Southwest Loop. Upon the full completion of Military Parkway, the road will consist of four 12-foot lanes, two 10-foot shoulders, two 4-foot shoulders and two 20-foot bar ditches for drainage, with a 34-foot median. Drainage improvements include the installation of storm sewer lines and drainage channels adjacent to the roadway pavement. Other improvements included the installation of sidewalks and landscaping, asphalt pavement markings, signage, waterline and irrigation utility relocates.

A key component to the success of the project included extensive coordination with the City of Mission Public Works Department, City of Mission Utility Department, Hidalgo County Precinct No. 3, Texas Department of Transportation, United Irrigation District, Texas Gas Company, and Magic Valley Electric Cooperative. This roadway is open for public use.

North Alamo Water Supply Corporation – La Feria Water Well Project

Client: North Alamo Water Supply Corporation
Contact Person: Steve Sanchez, General Manager
Telephone: 956-383-1618
Location: La Feria, TX

Melden & Hunt Inc. has been contracted to plan, design, and construct a water supply project which included the construction of one public water well, a ground storage tank, and two high service pumps. Ancillary facilities included as part of the water supply project included a pump building, disinfectant feed systems, electrical, instrumentation and control. This project also required all site development work such as fencing, paving, grading, drainage, and landscaping.

Moreover, Melden & Hunt, Inc. collaborates with hydrogeologist Kevin Spencer on this project to design the municipal well. Together, we possess a wealth of expertise beneficial for the construction of municipal wells in the North Alamo service area. The estimated cost for this project is $1,200,000.

City of McAllen - McAllen Public Utility – 8.25 MGD Water Treatment Plant

Client: McAllen Public Utilities
Contact Person: Mark Vega, P.E., General Manager
Telephone: 956-681-1630
Location: McAllen, Texas

Melden and Hunt, Inc. was subcontracted for the construction of McAllen's new Northwest Water Treatment Plant. Melden and Hunt, Inc.'s role in this contract included the development, design, bidding, and construction administration for the construction of City of McAllen's 8.25- MGD Northwest Water Treatment Plant. The raw water facilities constructed included a canal intake, raw water piping, and a 200-million-gallon storage reservoir with intake structure. The main plant facilities constructed included a low lift pump station, a flocculation/sedimentation basin with chlorine dioxide disinfection chamber, dual-media filters, a transfer pump station, and associated yard piping. Sludge handling facilities that were constructed included a backwash equalization basin, a plate settler, lagoons, and a decant pump station. Ancillary facilities work included a chemical building and chemical feed systems, an electrical building, an operations building, grading, paving and drainage, and landscaping.

Insurance

OUR INSIGHT. YOUR SUCCESS.

Melden & Hunt, Inc. has not been involved in any litigation, arbitration, administrative action related to past or current performance, or the subject of any professional censure or licensure suspension. There have been no insurance claims in the past 5 years. Notably, Melden & Hunt, Inc. has never been terminated from an assignment for non-performance or unsatisfactory work.

Plus, we maintain an outstanding performance record with our clients, maintain all required insurance, and have a bonding capacity to meet any project. For the City's projects, Melden & Hunt, Inc. will sign and administer all contracts as needed, as well as meet all insurance requirements.

The city of Edinburg will be named as Additional Insured, as per requirements, at the time of contracting. And we will furnish updated certificates of insurance with the Additional Insured added and any proof of payment of insurance premiums as requested and required by contract.

The following pages are copies of our insurance certificates for your review:

Professional Services Agreement

OUR INSIGHT. YOUR SUCCESS.

Melden & Hunt, Inc. has read the enclosed Services Agreement within the RFQ packet and will execute the proposed agreement upon receiving a work order. Melden & Hunt, Inc. commits to all required insurances, and we have a bonding capacity to meet any project. Melden & Hunt, Inc. will sign and administer all contracts, as needed.

Further, Melden & Hunt, Inc. has always been proud of its strength and ability to perform complex tasks. The overall entrepreneurial spirit of this company has been characterized by the ability and will to think differently and to find better, more future-oriented ways to generate value.

Melden & Hunt, Inc. reports good earnings for 2023. Along with many exciting projects, a solid financial position, and prospects for the future we have no doubt that 2024 will be the same.

It is important for the City of Edinburg to realize that Melden & Hunt, Inc. carefully manages its workload to minimize financial risk, never undertaking a contract without the proper resources to guarantee its absolute success; the firm is always investing in and maintaining its capital resources to keep up with the demands of its clients and the ever-changing world.

Melden & Hunt's business model has been to pursue work experience spanning nearly every conceivable sector of civil engineering and land surveying, and this unique diversity ensures our strength.

Melden & Hunt, Inc. is well positioned for future growth and together with our experience and committed employees; this will give Melden & Hunt, Inc. an excellent opportunity to take on new challenges. That is why Melden & Hunt, Inc. wants for the City of Edinburg to rely on our firm for its engineering and surveying needs.

Date: 7.15.24

Firm Philosophy

Our firm provides cost effective land surveying and engineering services based on our resources, experience and knowledge. We offer the best of technical performance, high standard of professionalism and integrity to the project.

Firm History

Quintanilla, Headley & Associates, Inc.

Founded in 1986, QHA provides a wide range of engineering and land surveying services throughout the Rio Grande Valley. QHA specializes in land surveying projects for right of way mapping, survey parcels, metes, and bounds descriptions, and topographic surveying. QHA uses the latest equipment and software to ensure we provide the most accurate field data.

QHA is managed by professional individuals who are registered with the Texas Board of Professional Engineers and the Texas Board of Professional Land Surveying. QHA is a certified as a Historically Underutilized Business (HUB).

Firm Capabilities

Our project management objectives are to deliver a final plan on schedule, on budget and one that fits the needs of our clients.

Summary

Mr. Quintanilla has been a licensed registered professional land surveyor since 1990. Since then, he has managed and performed numerous surveys in the areas of land title surveying, commercial surveying, subdivision platting, environmental and remediation projects, drainage studies, aerial photogrammetry, engineering/architectural design projects, GPS and geodetic control surveying.

Mr. Quintanilla has performed the boundary surveying of approximately 20 miles of right of way for drainage and roadway projects, as well as numerous land developments. He has supervised the preparation of survey parcels, right of way maps, signed and sealed final survey parcels and metes and bounds descriptions.

Relevant Experience

Hidalgo County:
Regional Mobility Authority SH 365 (Edinburg, TX):

Management and Organizational Approach

Our firm is located in the heart of Hidalgo County. We are very familiar with the geographies of this area. We have a long and successful relationship with the Hidalgo County staff as we have provided them with professional engineering services for a large number of developments throughout the city for the past 25 years. We have a great amount of records and data of the County's existing infrastructure.

QHA understands the County's need to constantly improve on the existing infrastructure for the people of Hidalgo County. We will provide the County with alternatives of the most cost effective systems and design. We understand the requirements of the utility companies and drainage and irrigation districts and we will design all projects in compliance.

Our firm provides full professional engineering, surveying, management, and inspection services. We use the latest equipment for field data collection and engineering design. This gives us the ability to expedite the design of the project and provide an efficient design.

Our principal, Mr. Alfonso Quintanilla is a Licensed Professional Engineer and a Registered Professional Land Surveyor. He will be the principal assigned to this project. Should the project require the acquisition of easements, Mr. Quintanilla has prepared hundreds of survey parcels with metes and bounds descriptions. This is a unique qualification that our firm provides.

Our firm ensures a successful partnership that will meet and exceed the County of Hidalgo's expectations. We will specifically become familiarized with a project by conducting field visits and gathering all information needed to properly design and execute all phases. Our project management objectives are to deliver a final plan on schedule, on budget, and personalized to meet the County's needs.

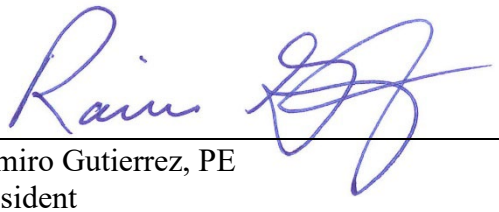
City of Edinburg
C/O City Secretary
415 W. University Drive
Edinburg, TX 78539

Dear City Secretary,



In response to the City of Edinburg's **RFQ #2024-7 "Land Surveying Services Rotation"**, R. Gutierrez Engineering Corporation (**RGEC**) is pleased to present its qualifications. **RGEC** understands that the **City of Edinburg** (**City**) is seeking statements of qualifications from firms interested in providing land surveying services on an "as needed" basis. The services to be performed may include topographic, boundary, platting preliminary, and all other necessary land surveying tasks, as specified by the **City**. The services may be requested by the **City** on a project-to-project basis, which may require from one (1) day to several months to complete. Generally, the selected Surveyor(s) will be expected to perform the services in accordance with the Scope of Services and in accordance with the requirements of this solicitation.

RGEC has extreme interest and is fully committed to providing land surveying services for the **City of Edinburg**. I, Ramiro Gutierrez, PE, will be your point of contact for all communications pertaining to this RFQ. As principal in charge of the firm, I am fully authorized to bind the firm to a contract with the City and have checked and verified that there are no addendums to this RFQ.

RGEC is registered with the State of Texas as both an engineering and land surveying firm and as a **Historically Underutilized Business (HUB)** and **Disadvantaged Business Enterprise (DBE)**. **RGEC** is an equal opportunity employer and does not discriminate in hiring, promotion, treatment, or other terms and conditions of employment based on race, sex, national origin, age, disability, or in any way violate Title VII of 1964 Civil Rights Act and amendments, except as permitted by said laws.

Respectfully submitted this 16th day of July 2024.

Company: **R. Gutierrez Engineering Corporation**

Ramiro Gutierrez, PE
President

1. TRANSMITTAL LETTER

R. Gutierrez Engineering Corporation (**RGEC**) has prepared and included at the beginning of this Statement of Qualifications, a transmittal letter indicating our interest and commitment to perform surveying services for the **City of Edinburg**. All pertinent information as required by the RFQ has been provided.

2. FIRM QUALIFICATIONS & EXPERIENCE (Overall Qualification of Team)

RGEC is a fully staffed civil engineering and land surveying firm located in Pharr, Texas. The firm has been in business for 26 years, having begun operation in July 1998. **RGEC** is registered and licensed to practice in the State of Texas as **Engineering Firm Number F-486** and **Land Surveying Firm Number 101650-00**. The firm is fully equipped and staffed to handle most any civil engineering and land surveying task with ease. **RGEC** has experience and history in performing the scope of services required of licensed surveyor(s) to assist the **City of Edinburg** in land and topographical surveying of various properties on an "as needed" basis. These services are, but not limited to the following:

1. Boundary lines, giving length and bearing on each straight line; interior angles; radius, point of tangency, and length of curved lines. Set iron pin (monument at property corners where none exists) drive pin 18" into ground, mark with wood stake; state on drawing whether corners were found or set and describe each.
2. Legal description, including measurements in recorded deeds for comparison with observed.
3. Area in square feet if less than one acre, in acres (to .001 acre) if over one acre.
4. Identify, jurisdiction and width of adjoining street and highways, width and how paved. Identity of landmarks.
5. Plotted location of structures on the property and on adjacent property within 30 feet. Dimension perimeters in feet and inches to nearest ½. State character and number of stories. Dimension to property lines and other buildings. Vacant parcels shall be noted "vacant".
6. Encroachments, including cornices, belt courses, etc., either way across property lines.
7. Fences and walls; describe. Identify party walls and locate with respect to property lines.
8. Recorded or otherwise known easements and right-of-way; state owner of right.
9. Possibilities of prescriptive right-of-way and nature of each.
10. Anticipated street widening.
11. Individual lot lines and lot and block numbers. Street numbers of buildings.
12. Sidewalks, curbs, gutters & drives on the block and extend to include the same across boundary streets.
13. Building line and setback requirements, if any.
14. Names of owners of adjacent property
15. Reconciliation or explanation of any discrepancies between survey and recorded legal description.
16. Title searches and title reports
17. Right-of-Way acquisitions

TOPOGRAPHICAL SURVEY REQUIREMENTS:

1. All lines of levels shall be checked by separate check level lines or on previous turning points or benchmarks.
2. Traffic devices, signs, in connection with boundary streets.
3. Future plans of city, utility districts, and municipal utilities when such information is discovered in routine information gatherings.
4. Minimum of one permanent benchmark on site for each ten or less acres; description and elevation to nearest .01'.
5. Contours at 1-foot intervals; error shall not exceed one-half contour interval.
6. Spot elevations at each intersection of a 20-foot square grid covering the property and if possible 5-foot grid interval(s) beyond.
7. Spot elevations at street intersections and at 5 feet on center on curb, sidewalk, and edge of paving including far

side of paving. If elevations vary from established grades, state established grades also.

8. Plotted location of structures, man-made and natural features; floor elevations at each entrance of building on property.
9. Location, size, depth and pressure of water and gas mains, and other utilities serving or on the property, valves, meters.
10. Location of fire hydrants available to property and size of main serving each.
11. Location of electric and telephone services and characteristics of service available.
12. Location, size, depth and direction of flow of sanitary sewers, storm drains and culverts serving or on property; location of catch basins and manholes and inverts of pipe at each; same at or in boundary streets.
13. Name of operating authority of each utility.
14. Mean elevation of water in any excavation, well or nearby body; flood level of streams.
15. Extent of watershed onto property. Probability of freshets overrunning the site.
16. Locations of test borings if ascertainable and elevation of top of holes.
17. Trees of caliper 3" and over (caliper 3' above ground) locate within 1' tolerance and give species.
18. Perimeter outline only of thickly wooded areas unless otherwise directed.
19. Location, size, elevation of elevated: piping insulated piping, conduit, pipe racks and supports; except that above building roofs.
20. Show dimensions and bearings of property boundaries and plot all locatable title exceptions and easements on the survey map.
21. Show existence or non-existence of any encroachments and right of way.
22. The written legal description of the property and exhibit(s) for recording purpose.
23. Provide an area measurement within boundary lines.
24. Easements – all utility, city and private easements shall be shown and labeled.
25. Legal description and exhibit(s) for any easements where required.
26. Setbacks – building and parking setbacks shall be shown and noted for each property or zoning areas.
27. All above grade utilities, including but not limited to overhead electrical, telephone, cable, street lighting, and other electrical and communications equipment; location and rim elevations of sanitary and storm sewer structures, water main valves, and hydrants; gas valves and all other above grade utility equipment.
28. All underground utilities, including but not limited to storm, sanitary, water, gas, telephone, electrical, and cable. Underground utilities to be exposed by others. Rim elevation, bottom of manhole, and all in and out inverts of utilities shall be noted. Note: if any of these utilities do not exist within or directly adjacent to the survey area, surveyor shall locate the nearest available service connection which can be used for future service to site.
29. Provide on the survey a list of names, addresses, and phone numbers of all applicable utility companies
30. Trees, shrubs, and planting areas: all trees 2" caliper and larger shall be labeled with caliper and species. All tree canopies shall be accurately shown.
31. All trees 6" caliper and larger shall be labeled with caliper and species. All tree canopies shall be accurately shown and areas of woods or shrubs accurately delineated.
32. Zoning of the property and all adjacent properties within 100' of the surveyed area.
33. Provide planning and zoning overlays.
34. Current flood plain information including FEMA regulatory 100-year and 500-year floodplain boundaries, notation of record flood event elevation (2008 flood), 100- year flood elevation and other DNR protected area boundaries.
35. All measurement tolerances provided on such surveys must be within readings for urban survey as specified on accuracy standards for ALTA/ACSM land title surveys.
36. When a significant discrepancy with the record maps and documents are found, or if monuments are set or if otherwise required by law, surveyor shall provide a "record of survey map" compliant with city and state standards.
37. Elevation certificate for flood insurance purpose (FEMA) coordination & documentation associated with phase I

and phase II real estate.

38. All other topographic surveying as assigned.

RGEC is a well-staffed civil engineering and land surveying firm. The firm has extensive experience and has provided land surveying services for multiple local government agencies on projects located in this general region of the state. This past experience makes **RGEC** uniquely qualified to provide land surveying services to the **City**. **RGEC** specializes and has experience in the following types of engineering and land surveying projects:

Land Surveying Services	**Water Resources**
• Residential & Commercial Land Surveys • Residential & Commercial Improvement Surveys • Acreage Surveys • ROW & Easement Parcels • Topographical Surveys • Construction Staking • ALTA Surveys • Elevation Certificates	• Water Distribution • Wastewater Planning / Collection / Treatment • Pumping/Lift Stations • Storm Water Pollution Prevention Plans • Pre-treatment Compliance • Public Works • Pumping/Lift Stations
Drainage Services	**Land Development Services**
• Hydrologic Studies • Hydraulic Design • Storm Sewer Design • Drainage Channel Design • Detention Ponds • Floodplain Mapping	• Feasibility Studies • OSSF Site Evaluations • Drainage Studies / Reports • Subdivision Plans • Civil Site Plans Subdivision Plat Processing & Reviews
Transportation Services	**Other Services**
• Streets & Highways • Roadway Geometrics • Signing & Striping • Traffic Control Plans • Traffic Signal Design • Airport Design	• Environmental Services • Project Management • Construction Phase Services • Permitting • Landfill Services • Municipal Engineering

Additionally, the firm is currently pre-certified by TXDOT in various work categories as listed in the following table including right-of-way surveys, design survey, and construction survey.

TXDOT CERTIFICATIONS	
3.2.1	ROUTE STUDIES & SCHEMATIC DESIGN
4.2.1	ROADWAY DESIGN
4.4.1	FREEWAY INTERCHANGES
8.1.1	SIGNING, PAVEMENT MARKING, AND CHANNELIZATION
9.1.1	BICYCLE AND PEDESTRIAN FACILITY DEVELOPMENT
10.1.1	HYDROLOGIC STUDIES
10.2.1	ROADWAY HYDRAULIC DESIGN
10.3.1	BRIDGE HYDRAULIC DESIGN
11.1.1	ROADWAY CONSTRUCTION MANAGEMENT AND INSPECTION
15.1.1	RIGHT-OF-WAY SURVEYS
15.2.1	DESIGN SURVEY
15.2.2	CONSTRUCTION SURVEY

RGEC specializes and has provided professional engineering design and land surveying services for various clients in both the public and private sectors. The staff at **RGEC** has a diversified professional engineering and surveying experience and over 1850 engineering and land surveying projects completed. **RGEC** can provide clients the expertise and innovation necessary to provide cost-effective solutions.

ABILITY TO MEET SCHEDULES & DEADLINES

RGEC is committed to providing the **City** with the attention it deserves. The firm has the capability to incorporate any project into its current schedule with ease. The firm currently has 8 employees which include ***three (3) registered professional engineers and one (1) registered professional land surveyor***. With this amount of professional staffing, the firm is able to distribute the work strategically to enable work on multiple projects simultaneously. In addition, the firm's current workload is significantly less than the usual workload; thus, the firm finds itself ready and able to commence providing engineering services to the **City** immediately after negotiating an agreement. The approach and philosophy at **RGEC** is to have efficient management and quality control as part of every project. This approach enables **RGEC** to deliver services on time and within budget. At **RGEC**, "**quality**" is the responsibility of the entire staff. Management sets the "**quality**" standards, and each team member works to achieve those standards.

A Quality Control Plan will be developed for each task. This plan allows RGEC to identify objectives and priorities as well as establish quality control policies and requirements for each team member. The plan also establishes schedules and milestones, scope of the work to be undertaken, and a working budget. The schedule will provide work sequences and review times of the work to be performed. **RGEC** will diligently pursue the completion of the task, as defined by the milestones and deliverable due dates outlined in the schedule. **RGEC** will attend meetings with the **City** to communicate all progress and to assist in the decision-making process as requested. **RGEC** will also assist the **City** at meetings with other entities as may be needed. **RGEC** will have regular meetings with the **City** to keep them abreast of the progress on the task.

The project manager will be responsible for all project coordination and communication with the **City's** appointed project personnel. Communications in the form of meetings, email, on-line communications or telephone conversations will all be documented, and minutes or notes of these communications will be distributed to all interested parties.

RGEC has provided engineering and surveying services to multiple governmental agencies. The following is a list of surveying projects completed by **RGEC** within the last 5 years for various governmental agencies along with contact and phone number information for each project.

Owassa Road Right-of-Way & Topographic Survey – Pharr, Texas.

RGEC was hired by the TEDSI to provide topographic surveying and right-of-way mapping services to the City of Pharr. Topographic surveys included cross-sections every 100' to 10' outside the proposed right-of-way when possible. Driveway cross-sections were also obtained with driveways being identified by type of access and type of surface. Approximate centerline stations were identified. Drainage structure types and flow lines were also obtained. Fences, mailboxes and signs were tied down. Utilities were marked as per DIGTESS and utility company information. A right-of-way map was prepared using the most current adjoining information such as deeds, plats, ownership information and title reports provided by owner. Six individual parcels were prepared for use in acquisition of additional right-of-way.

Client: City of Pharr
Contact: Maria Rangel, PE / Project Engineer
Phone : (956) 402-4221

FY2017 "5310 Enhanced Mobility of Seniors and Individuals with Disabilities" Project – Pharr, Texas

RGEC was hired to provide topographic surveying services of existing conditions for the design and construction of sidewalks and sidewalk ramps on various street segments for a total distance of 12,300 linear feet from back of curb or edge of pavement to existing right-of-way line for use in design of sidewalk improvements by the City of Pharr engineering department. Topographic surveys picked up existing features that included: existing sidewalks and ramps, driveways, mailboxes, intersection radius, drainage pipes, manholes, inlets, water valves, fire hydrants, sanitary sewer manholes, cleanouts, roadway signs, telephone poles, light poles, overhead lines, gas markers, gas meters, and utilities that are spotted. The surveys identified existing right-of-way based on property markers found and existing subdivision plats, or title information provided. Surveys included cross-sections from back of curb to right-of-way line and to include cross-section of existing driveways or ramps.

Phone: (956) 402-4221

PSJA Tri-City Pedestrian Safety Improvements – Pharr, Texas

RGEC was hired to provide topographic surveying services of existing conditions for the design and construction of sidewalks and sidewalk ramps on various street segments for a total distance of 45,000 linear feet from back of curb or edge of pavement to existing right-of-way line for use in design of sidewalk improvements by the City of Pharr engineering department. Topographic surveys picked up existing features that included: existing sidewalks and ramps, driveways, mailboxes, intersection radius, drainage pipes, manholes, inlets, water valves, fire hydrants, sanitary sewer manholes, cleanouts, roadway signs, telephone poles, light poles, overhead lines, gas markers, gas meters, and utilities that are spotted. The surveys identified existing right-of-way based on property markers found and existing subdivision plats, or title information provided. Surveys included cross-sections from back of curb to right-of-way line and to include cross-section of existing driveways or ramps.

Rancho Santa Cruz Topographic Survey – McAllen, Texas.

RGEC was hired by the City of McAllen to provide a comprehensive topographic survey of the El Rancho Santa Cruz Subdivision area. As surveyor, RGEC established a base map using existing subdivision plats and property corner monuments. Existing Right-of-Way was identified, and 1 benchmark was established near the intersection of El Rancho Road and South H Street. Horizontal locations of utilities, underground & overhead, were provided using DIG TESS and local utility company information. Cross sections consisting of a 25-foot grid of a city owned tract with elevations were picked up. Cross sections of surrounding streets were also picked up. Existing infrastructure for storm & sanitary sewer included size & flow line. Detailed topographic information of existing improvements was obtained. Electronic files in DGN format were provided.

City of McAllen

Client: City of McAllen
Contact: Jose F. Delgado, EIT, CFM / Engineering Designer
Phone: (956) 681-1167

Helena Avenue Topographic Survey – McAllen, Texas.

RGEC was hired by the City of McAllen to provide a topographic survey of all existing improvements within the apparent right-of-way of Helena Avenue with limits from Ware Road on the west and South 24th Street on the east end of the project. As surveyor, RGEC established a base map using existing subdivision plats and property corner monuments. Existing Right-of-Way was identified. Horizontal locations of utilities, underground & overhead, were provided using DIG TESS and local utility company information. Detailed topo included edge of pavement, centerline, roadside swales and cross sections at every block for roadway topography and valves, hydrants, manholes, inlets, standpipes, pedestals, power poles, etc for utilities. Manhole and inlet inverts and pipe sizes were registered. Two (2) permanent project benchmarks were provided. Deliverables included the CADD file in DWG format, ASCII file, Field Notes, and 1 copy of the original survey.

City of McAllen

Client: City of McAllen
Contact: Marlen Garza, PE / Project Engineer
Phone: (956) 681-2715

Torres Acres Right-of-Way Dedication Survey – McAllen, Texas.

RGEC was hired by the City of McAllen to provide Right-of-Way parcel surveys with metes and bounds for public right-of-way dedication in the area known as Torres Acres in north McAllen. Work was done in 2 phases. Phase 1 established boundaries for subject parent tract, provide CADD file and supporting field documentation for use by City in finalizing proposed right-of-way dedication boundaries with respect to proposed public improvements. Phase 2 established final proposed right-of-way boundaries per City for tract; prepare signed and sealed metes and bounds and parcel sketches. Title reports and the proposed roadway alignment were provided by the City.

City of McAllen

Client: City of McAllen
Contact: Mario Cruz, PE / Project Engineer
Phone: (956) 681-1151

HCRMA – SH365 Segment 3 @ US-281 Military Highway – Hidalgo County, Texas.

RGEC was hired by TEDSI Infrastructure Group, Inc. as a sub-consultant to provide surveying services for 24 parcels and a strip map at the intersection of US Highway 281 and the BSIF connector. Benchmarks for horizontal and vertical control are to be set at every 1000' of the project. Existing center line is to be staked with #5 iron rods at every 1000'. Topographic cross sections are to be done at every 100' and will extend 10' outside the proposed ROW to develop an accurate DTM model.

Client: Hidalgo County Regional Mobility Authority
Contact: Pilar Rodriguez, PE, Executive Director
Phone: (956) 402-4762

RGEC has one office located at 130 E. Park Avenue, Pharr, TX 78577 which will be providing services for the City of Edinburg.

To handle part-time staffing needs for smaller assignments, **RGEC** has the financial stability and resources to hire additional personnel and has done so in the past. **RGEC** maintains an excellent working relationship with several local firms. If necessary, the firm would request permission to sub-contract work on a project by project basis.

3. TEAM MEMBER QUALIFICATIONS & EXPERIENCE

Ramiro Gutierrez., PE
President and Principal In Charge

Professional Engineer, State of Texas, #65948

Pablo Soto, Jr., PE, RPLS
Survey Project Manager

Registered Professional Engineer, Texas, #66278

Registered Professional Land Surveyor, Texas, #4541

Hernan A. Lugo, PE, CFM

Professional Engineer, State of Texas, #108728

Certified Floodplain Manager, State of Texas Certification #1747-09N

Certified Stormwater Manager

Certified Water Quality & Bacteria Monitor

Professional Engineer, State of Florida, #74961

RGEC is a fully staffed professional engineering and land surveying firm located in Pharr, Texas. The firm is registered to practice in the State of Texas with **engineering firm number F-486** and **land surveying firm number 101650-00**. Copies of the firm's current registration certificates are provided on pages 16 and 17. The firm is fully equipped and staffed to handle most any civil engineering and land surveying task with ease. With **three (3) professional engineers and one (1) RPLS** on staff, **RGEC** can assure each project will receive the professional attention it merits. The firms' capabilities and diversity enable **RGEC** to devote personal attention to the **City**. **RGEC** provides clients the expertise and innovation necessary to provide practical, cost-effective solutions.

RGEC is a civil engineering and land surveying firm with 8 employees located in Pharr, Texas. The firm has been in business for 24 years, having begun operation in 1998, and is fully equipped and staffed to handle most any civil engineering and land surveying task with ease.

Mr. Ramiro Gutierrez, PE, will be the primary contact for this contract and will be responsible for the day-to-day dealings with the **City**. Mr. Gutierrez is a longtime resident of the Rio Grande Valley and is extremely knowledgeable of the Rio Grande Valley area, the people, and their needs. He grew up in San Juan, Texas, and currently resides in Pharr, Texas.

Mr. Gutierrez has more than 30 years of professional engineering experience and is registered with the State of Texas as **Professional Engineer #65948.** He is TXDOT pre-certified to provide civil engineering services and is a former TXDOT engineer where he worked in various capacities in Austin, the Corpus Christi District, and the Pharr District. While working with TXDOT for 14 years, Mr. Gutierrez moved up the ladder and his last position with TXDOT was that of Area Engineer in the Alice Area Office. He was responsible for the design, construction, maintenance and operation of the State highway system in all of Jim Wells and Kleberg Counties and part of Live Oak and Nueces Counties.

In addition to Mr. Gutierrez, a key member of the staff at **RGEC** is Mr. Pablo Soto, Jr., PE, RPLS. Mr. Soto is registered with the **State of Texas as Professional Engineer #66278** and **Registered Professional Land Surveyor #4541**. He is TXDOT pre-certified to provide land surveying services and is a long-time resident of the Valley. Mr. Soto grew up in San Juan and currently resides in Pharr. He has a long history of working in the Rio Grande Valley as a consultant in professional engineering and land surveying. Mr. Soto has extensive surveying experience in South Texas and provides a vast and in-depth knowledge of the local area with his tremendous background in design engineering and surveying. Mr. Soto is responsible for the surveying work at various levels of design from topographic surveying to surveying for design and construction staking. He also performs boundary surveying services

for acquisition of right-of-way and easements on municipal projects. He has developed and maintained an excellent working relationship with various public agencies in the Rio Grande Valley as well with other engineering firms.

Another key member of the staff at **RGEC** is Mr. Hernan A. Lugo, PE, CFM. Mr. Lugo is registered with the **State of Texas as Professional Engineer #108728** and **CFM Certification #1747-09N**. He grew up in Caracas, Venezuela and graduated from Universidad Nueva Esparta in Caracas, Venezuela with a Bachelor of Science degree in Civil Engineering in 1998. In 2011 he earned a Master of Science degree in Environmental Engineering from Texas A&M University at Kingsville.

Mr. Lugo has more than 24 years of experience in the engineering and construction industry. He is also a Certified Floodplain Manager and a Certified Stormwater Manager. Mr. Lugo as a former Project Manager for the City of Alton provided technical assistance to Public Works and Planning Department as well as overseeing all land development and capital improvement projects within the city. In the meantime, he developed and maintained and excellent working relationship with private and public agencies as well with other engineering firms. He has worked in various capacities in the region and coordinated his work with various agencies such as the Environmental Protection Agency, Texas Commission on Environmental Quality (formerly TNRCC), Texas Water Development Board, Hidalgo County Drainage District #1, and multiple irrigation districts in Hidalgo County. Mr. Lugo also managed engineering services and operated an independent civil engineering firm in Pharr, Texas.

RGEC is pre-certified by TXDOT in the following categories:

TXDOT CERTIFICATIONS	
3.2.1	ROUTE STUDIES & SCHEMATIC DESIGN
4.2.1	ROADWAY DESIGN
4.4.1	FREEWAY INTERCHANGES
8.1.1	SIGNING, PAVEMENT MARKING, AND CHANNELIZATION
10.1.1	HYDROLOGIC STUDIES
10.2.1	ROADWAY HYDRAULIC DESIGN
10.3.1	BRIDGE HYDRAULIC DESIGN
11.1.1	ROADWAY CONSTRUCTION MANAGEMENT AND INSPECTION
15.1.1	RIGHT-OF-WAY SURVEYS
15.2.1	DESIGN SURVEY
15.2.2	CONSTRUCTION SURVEY

A more detailed list of services offered by the firm is as follows:

Land Surveying Services

- Residential & Commercial Land Surveys
- Residential & Commercial Improvement Surveys
- Acreage Surveys
- ROW & Easement Parcels
- Topographical Surveys
- Construction Staking
- ALTA Surveys
- Elevation Certificates

Land Development Services

- Parking Lot Design
- Feasibility Studies
- OSSF Site Evaluations
- Drainage Studies / Reports
- Subdivision Plans
- Civil Site Plans

Subdivision Plat Processing & Reviews

Drainage Services

- Hydrologic Studies
- Hydraulic Design
- Storm Sewer Design
- Drainage Channel Design
- Detention Ponds
- Floodplain Mapping

Pumping/Lift Stations

Transportation Services

- Streets & Highways
- Roadway Geometrics
- Signing & Striping
- Traffic Control Plans
- Traffic Signal Design
- Airport Design

Water Resources

- Water Distribution
- Wastewater Planning/Collection/Treatment
- Pumping/Lift Stations
- Storm Water Pollution Prevention Plans
- Pre-treatment Compliance
- Public Works

Other Services

- Environmental Services
- Project Management
- Construction Phase Services
- Permitting
- Landfill Services
- Municipal Engineering

The staff at **RGEC** has more than 75 years of combined and diversified professional engineering and surveying experience and over 1,850 engineering and land surveying projects completed. **RGEC** is a well-staffed civil engineering and land surveying firm. The firm has extensive experience and has provided professional engineering services for multiple local government agencies on locally funded public works projects, federally funded construction projects, and projects located in this general region of the state. This experience makes **RGEC** uniquely qualified to provide engineering services for the **City**.

Experience with Government Agencies

RGEC has considerable knowledge and experience working with various government agencies throughout most of the South Texas Region; and as such is familiar with Federal, State and Local Regulations, Policies and Procedures.

RGEC has experience developing projects for or while coordinating with many governmental agencies. **RGEC** has developed projects for the cities of Edinburg, Pharr, McAllen, TXDOT, Cameron County, Hidalgo County, the Regional Mobility Authority, and various school districts across the Rio Grande Valley. These projects have consisted of parking lots, roadways and street projects, overpass design projects, traffic signal design projects, airport expansion projects, water and sanitary sewer infrastructure projects. On many of these projects, **RGEC** has been required to coordinate with various governmental agencies such as **the International Boundary & Water Commission, the US Army Corps of Engineers, US Fish & Wildlife, Texas Parks & Wildlife, Texas Historical Commission, Texas Commission on Environmental Quality (formally Texas Natural Resources Conservation Commission), Texas Department of Transportation, Federal Highway Commission, Federal Aviation Administration, Federal Emergency Management Agency**, and many others.

Additionally, our staff is familiar with the requirements of numerous utility companies such as Texas Gas Service, American Electric & Power, Magic Valley Electric Coop, Time Warner Communications/Spectrum, Oil/Gas Exploration/Production, Sprint, Verizon and ATT. This list of agencies/companies is representative and is not all inclusive.

EDUCATION

- Bachelor of Science in Civil Engineering
  University of Texas, 1983
  Austin, Texas

Ramiro Gutierrez, PE

President and Principal In Charge

BIOGRAPHIC SUMMARY AND EXPERIENCE

Mr. Ramiro Gutierrez, PE is the principal in charge of R. Gutierrez Engineering Corporation and through his broad range of experience offers his clients a commitment of unsurpassed integrity, excellence and satisfaction. Mr. Gutierrez is proud of his excellent reputation in meeting client's aggressive schedules, and his ability to assemble multi-disciplinary project teams to give the client the specialized attention and service they merit.

Mr. Ramiro Gutierrez, PE is a long-time resident of the Rio Grande Valley. He grew up in San Juan, Texas, and currently resides in Pharr, Texas. He is a former Texas Department of Transportation (TXDOT) engineer. While with TXDOT, Mr. Gutierrez worked in various capacities in the Pharr, Austin, and Corpus Christi Districts. His last position with TXDOT was that of Area Engineer in the Alice Area Office where he was responsible for the design, construction and maintenance activities on State roads in Jim Wells, Kleberg, Live Oak and Nueces Counties. Before opening his own firm, Mr. Gutierrez worked for a large engineering firm as a Project Manager responsible for developing transportation, municipal and site development type projects. Since founding his own firm Mr. Gutierrez has worked extensively in the Hidalgo County area on a wide variety of projects including municipal infrastructure projects related to streets, drainage, water, sanitary sewer, parks, etc., and has become intimately familiar with the local area's characteristics

Mr. Gutierrez is a licensed Professional Engineer with over 34 years of experience in management, design, construction and maintenance of drainage, highway, airport, street and utilities projects. The work involved analyzing and developing design alternatives, developing construction plans and bid packages; managing sub-consultant design and surveying contracts; managing construction projects; recommending, approving and processing change orders; assuring compliance with state and federal policies and procedures; monitoring project costs; developing and implementing maintenance action plans; recommending and implementing changes in the operation of our transportation system; providing quality customer service; developing and maintaining good working relationships with local public officials.

Mr. Gutierrez has worked as a Project Engineer and designer multiple street, drainage, roadway and utility improvement projects, some which included flood plain mapping and flood elevation studies in the south Texas and Rio Grande Valley areas. He has analyzed and developed preliminary engineering design alternatives, prepared final design, final construction plans and technical specifications and contract documents for the projects. Managed the construction of projects assuring compliance with the plans and specifications all the way through final inspection, project acceptance and final payment to contractor. Assured that industry standard construction procedures were followed on all projects.

BIOGRAPHIC SUMMARY AND EXPERIENCE

Mr. Pablo Soto, Jr., PE, RPLS grew up in San Juan and is a resident of Pharr, Texas. He has had a long working experience as a consultant in civil engineering and surveying. Mr. Soto provides a vast and in depth knowledge of the San Juan area with his background in civil engineering and surveying. Mr. Soto is responsible for the surveying work at various levels of design from topographic surveying to surveying for design and construction staking. He also is responsible for all property boundary surveys for the office. He has developed and maintained an excellent working relationship with various private and public agencies as well as with other engineering and land surveying firms. Mr. Soto brings over 30 years of professional surveying experience to our team. Mr. Soto's experience includes all types of Land Surveying, Parcel Descriptions, Subdivision work and TX-DOT Right of Way Surveying & Parcel Descriptions. Most of his experience has been in the South Texas community.

RECENT PROJECTS

STC Pecan Plaza Parking Lot, McAllen, Texas. Responsible for civil engineering tasks required for the renovation of an existing 140 parking lot space. The scope of working consisted of three phases. In the first phase, we surveyed the existing electrical distribution branch circuits, panels, lighting and lighting control. The second phase consisted of preparation of an engineer's estimate of probable costs to establish a project budget and the evaluation of LED lighting for parking lots. We then proceeded with preparation of the design for construction documents. The parking lot lighting was designed to provide an average maintained 5-foot-candle illumination to comply with the Illuminating Engineering Society of North America and STC illumination standards. Branch circuits were also designed to maintain a 3% voltage drop regulation.

P-SJ-A I.S.D. Survey Services Project – P-SJ-A, Texas. The firm performed boundary surveys utilizing deed and title information to locate and delineate all easements on each property. Full terrain topography for each survey was done, a detailed elevation survey was performed, and a precise contour map was developed for use in civil engineering design documents for each property. Existing facilities, if they existed, such as buildings, **parking lots, driveways**, sidewalks, water valves, sanitary sewer manholes, storm sewer inlets and manholes, were picked up and shown on each of the final survey drawings. The surveys were delivered both on paper copies and electronically for use in developing design plans. A "metes and bounds" description of each property to be acquired was also provided.

P-SJ-A LBJ Middle School – Pharr, Texas. The firm was responsible for the development of a complete ALTA Survey for this project. Full terrain topography was done. All building improvements, roadways, alleys, **parking lots, driveways**, and sidewalks were mapped. All utilities, easements and right of way areas were also mapped. Contour elevations were also included on the ALTA survey plat. A "metes and bounds" description of the property was also provided.

PE LS
Texas Board of Professional Engineers and Land Surveyors

BIOGRAPHIC SUMMARY AND EXPERIENCE

Mr. Hernan A. Lugo, PE, CFM grew up in Caracas, Venezuela and worked as a resident engineer for a private firm in Venezuela from 1998 to 2001 where he provided design and project management services for various civil engineering projects. In 2001, Mr. Lugo moved to Miami, Florida where he worked for Voice Stream, Inc. as a technical consultant for the sales force.

Mr. Lugo graduated with a Bachelor of Science degree in Civil Engineering in 1998 and a Master of Science degree in Environmental Engineering in 2011. Mr. Lugo is licensed by Texas Board of Professional Engineers to practice civil and environmental engineering under license #108728 and has more than 13 years of experience in the engineering and construction industry. He is also a Certified Floodplain Manager and a Certified Stormwater Manager.

Mr. Lugo as a former Project Manager for the City of Alton provided technical assistance to Public Works and Planning Department as well as overseeing all land development and capital improvement projects within the city. In that position, he developed and maintained and excellent working relationship with privates and public agencies as well with other engineering firms. He has worked in various capacities in the region and also coordinated his work with various agencies such as the Environmental Protection Agency, Texas Commission on Environmental Quality (formerly TNRCC), Texas Water Development Board, Hidalgo County Drainage District #1, and multiple irrigation districts in Hidalgo County. Mr. Lugo also managed engineering services and operated an independent civil engineering firm in Pharr, Texas.

RECENT PROJECTS

Owassa Road Right-of-Way & Topographic Survey – Pharr, Texas. RGEC was hired by the TEDSI to provide topographic surveying and right-of-way mapping services to the City of Pharr. Topographic surveys included cross-sections every 100' to 10' outside the proposed right-of-way when possible. Driveway cross-sections were also obtained with driveways being identified by type of access and type of surface. Approximate centerline stations were identified. Drainage structure types and flow lines were also obtained. Fences, mail boxes and signs were tied down. Utilities were marked as per DIGTESS and utility company information. A right-of-way map was prepared using the most current adjoining information such as deeds, plats, ownership information and title reports provided by owner. Six individual parcels were prepared for use in acquisition of additional right-of-way.

URS Surveys – Rio Grande Valley, Texas. As part of URS's contract for Management Services for Community Development Block Grant Disaster Recovery Program for Hurricane Dolly with the Lower Rio Grande Valley Development Council, RGEC was hired to provide detailed topographic and boundary surveys for all the properties within the Rio Grande Valley. Surveys included legal description of properties, utility easements, improvements including but not limited to houses, fences, driveways, trees over 6" in diameter, sidewalks, slabs, etc…, utility locations, staking of property corners, building setback lines and plat of property to meet permitting requirements for construction of a single family residential structure. Multiple properties also required elevation certificates.

PREVIOUS EXPERIENCE WITH THE CITY OF EDINBURG

Listed here for reference regarding the success and capabilities of the firm's past services are five individual projects for which **RGEC** performed engineering services for the **City**.

A. **University Drive Topography – Edinburg, Texas**. The firm was hired by the **City of Edinburg** to provide a detailed topographic survey of University Drive (SH107) from 10th Avenue west to approximately 100' west of 6th Avenue. The firm obtained cross sections from ROW to ROW at 100' intervals and all appropriate locations providing information regarding existing median, median openings, private & commercial driveways, sidewalks, ramps, drainage structures, fences, signs, mailboxes, traffic signals and utilities. The survey was provided to the City in AutoCAD format.

B. Edinburg Downtown Water Treatment Plant – Edinburg, Texas. The firm was responsible for the engineering design of underdrain rehabilitation at the Edinburg Downtown Water Treatment Plant. The work includes review of current water quantity & quality issues, evaluation of applicable regulations, review of past inspection reports, and discussion of current operations to identify & address issues. Design drawings were prepared showing existing facilities and proposed facilities. Pipes & blower for filter backwash were sized and hydraulic calculations for the proposed modifications were done. Services involved preparing estimates, preparing bid packages, assisting during the bid process, construction phase services, topographic surveying services and periodic site observations to be provided. Record drawings will be issued at completion of the project.

C. Edinburg Land Fill – Edinburg, Texas. The firm was responsible for the civil site plan and surveying services for construction of the Edinburg Landfill Administrative Office & Maintenance Yard Complex. The work includes sanitary sewer, water, drainage, grading, paving and dimensional control plans. Final schematic design of the proposed civil-site improvements was also developed. Cost estimates of the work developed by the engineer were prepared for bidding purposes. Bid documents for the engineer's work were also prepared and delivered to the architect. **Survey work includes collecting of all topographic information and establishing horizontal and vertical control for use in developing the project.**

D. Jackson Road Paving & Drainage – Edinburg, Texas. Worked as Project Engineer responsible for the development of schematic design, right-of-way map, plans, specifications and estimate for the improvement of an existing two-lane road to a five-lane road with shoulders and a continuous left-turn lane. This project was developed from conception through the final design stage. Work included Drainage Design, irrigation structure adjustments, and Preparation of Plans Specifications and Estimate (PS&E). The work also included project management**. Survey work includes collecting of all topographic information and establishing horizontal and vertical control for use in developing the project**.

E. Canton Road Paving & Drainage – Edinburg, Texas. Worked as Project Engineer responsible for the development of schematic design, right-of-way map, plans, specifications and estimate for the improvement of an existing two-lane road to a five-lane road with shoulders and a continuous left-turn lane. This project was developed from conception through the final design stage. Work included Drainage Design, irrigation structure adjustments, and Preparation of Plans Specifications and Estimate (PS&E). The work also included project management. **Survey work includes collecting of all topographic information and establishing horizontal and vertical control for use in developing the project**.

5. INSURANCE

RGEC carries $2,000,000.00 of general aggregate liability insurance with a $1,000,000.00 limit per each occurrence. The firm also carries $1,000,000.00 auto liability insurance, the required workman's compensation insurance and $1,000,000 of professional liability coverage. A copy of a current insurance certificate is included in "Appendix A – Additional Information and Submittals". A completed **City of Edinburg** Certificate of Insurance will be provided immediately after award of contract showing **RGEC's** type of insurance and coverage limits as stated above. Types of insurance to be verified are Commercial General Liability, Texas Business Automobile Liability, Worker's Compensation, and Professional Liability Coverage.

The following is a list of insurance claims against the firm within the past 5 years:

- 2019 – Workers Comp. – 1 Claim
- 2022 – Automobile – 1 Claim
- 2023 - Workers Comp. – 1 Claim

6. PROFESSIONAL SERVICES AGREEMENT

RGEC has read the Professional Services Agreement provided in the **City's** request for statements of qualifications and will meet all the prerequisite insurance requirements. **RGEC** also agrees to enter into a Professional Services Agreement such as the one provided.

RICKMAN
LAND SURVEYING, LLC

July 10, 2024

Mr. Mardoqueo Hinojosa, City Engineer
City of Edinburg
415 W. University Drive
Edinburg, Texas 78539

Dear Mr. Hinojosa:

We appreciate the opportunity to submit our Statement of Qualifications for the Land Surveying Services rotation contract for October 1, 2024 through September 30, 2026.

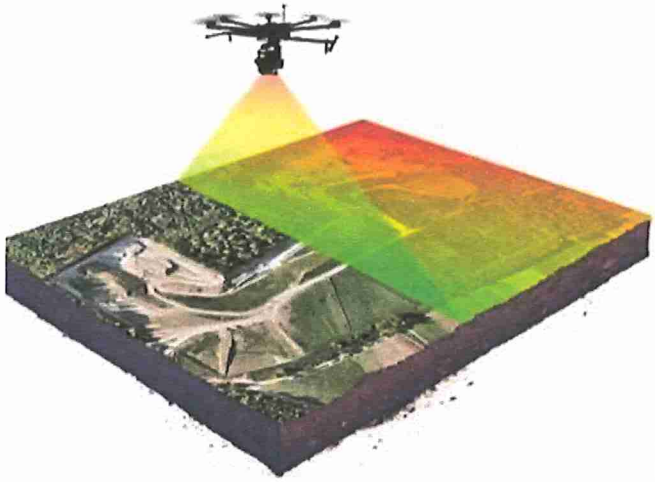
Overview
Rickman Land Surveying, LLC, a certified Historically Underutilized Business certified by the State of Texas, opened it doors in 2011, offering land surveying services to all of Texas, including boundary, topography, design survey, parcel acquisition, route surveys, and construction staking. We currently employ 15 people, including one Registered Professional Land Surveyor, Office and Field Technicians, along with appropriate support personnel. We strive to do quality work responsibly, timely and with integrity.

Principal
Cheryl Rickman Hill, Manager & Owner

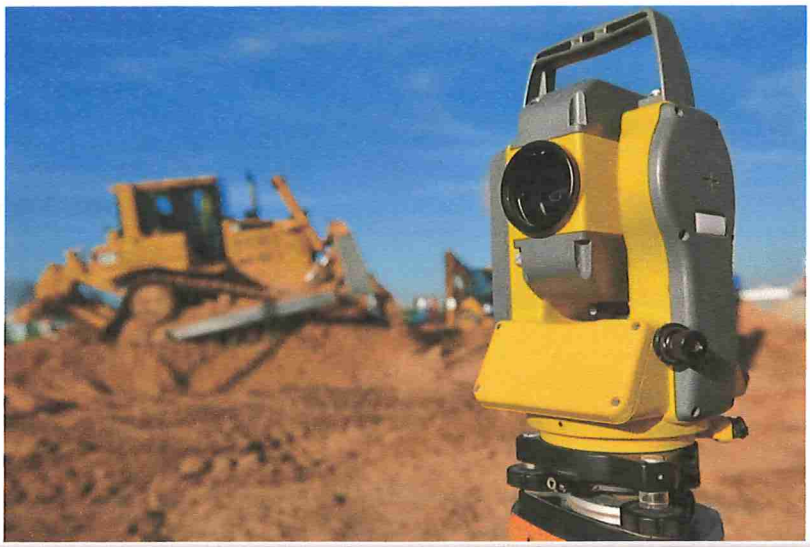
Experience
Rickman Land Surveying's experience is broad. We serve businesses, utilities, individuals and communities all over the state of Texas to help them accomplish the growth and development they desire. Because of this, we are uniquely qualified to help the City of Edinburg accomplish their goals as well.

A sample of some of our recent projects include

- Utility Engineering Group/City of Marion
    - Boundary/Right of Way and topography of +/- 10 miles of city streets, including location and inverts of 70+/- manholes, permanent horizontal and vertical control for City sewer rehabilitation project
- Bertram Economic Development Corporation
    - Boundary, All Improvements, utilities and topography for 6 city blocks for use in planning for future revitalization and development of downtown area
- Utility Engineering Group/City of Copperas Cove Lift Station Rehabilitation Project
    - Boundary, all improvements, utilities, manhole inverts, topography of 8 different lift station sites for purpose of planned rehabilitation
- City of Bertram Waste Water Project/Utility Engineering Group
    - Boundary and topographic survey for design and parcel acquisition for new wastewater treatment plant and more than 9 miles of proposed new wastewater line
- Valcor/Kimley Horn-Lemon Creek Multiuse project
    - Boundary, Topographic, Tree surveys for design, platting and construction
- GBRA Dietz Wastewater Project Phase A&B/Utility Engineering Group
    - Boundary, topographic and tree survey for design, platting and construction



This is just a sample of the project we have been working on. We sincerely hope to have an opportunity to visit with you in person. Thank you for seriously considering Rickman Land Surveying, LLC., for the Land Surveying Services Rotation contract.



Please let me know if you have any questions.

Sincerely,

Cheryl Rickman Hill

Re: Request for Qualifications #2024-7 – Land Surveying Services Rotation

Mr. Hinojosa,

Thank you for allowing us the opportunity to present our Statement of Qualifications for your review and consideration. We welcome the opportunity to offer the City of Edinburg our services as they relate to the above-mentioned RFQ. Enclosed, please review our Statement of Qualifications.

Our office in Edinburg is the firm's main office and our staff looks forward to contributing to the City's continuing effort to improve the lives of our families and fellow citizens. We are confident that, if given the opportunity, we can continue to provide a broad scope of expert engineering, surveying and project management services and become an essential asset for the City.

Rio Delta Engineering offers professional land surveying services using state of the art technology and equipment. Some of our deliverables are ALTA, title and boundary surveys, parcel/right-of-way maps for acquisition, appraisals, and condemnation proceedings, metes and bounds/legal descriptions, construction staking, as-built survey, design and construction survey, topographic survey, drone-surveying for aerial photogrammetry and mapping, horizontal and vertical control points and maps, construction staking, and virtually any surveying and mapping applications our clients have required for their projects. We have the capability to perform all or most aspects of the proposed tasks, including, but not limited to, land/property, construction, and topographical surveying. We are a local firm with offices in Edinburg, Rio Grande City, and San Antonio. We offer our clients the whole range of land surveying services while maintaining the local everyday type of availability and service required by our clients. We have an in-house Registered Professional Land Surveyor (RPLS) and can provide prompt responses and full surveying services as may be needed. Rio Delta Engineering has the capacity to take on any project large or small and we can meet aggressive schedules and deadlines as needed. Our current workload is such that we can begin work on any project immediately.

Our goal is to become part of your team by providing counsel for all your construction management, engineering, surveying, and administrative needs. We are very familiar with the issues at hand and have worked on similar projects within the City of Edinburg and surrounding areas in Hidalgo and Starr Counties.

Our approach to projects entails a hefty combination of the latest technology, creativity, and an innovative approach towards the problem at hand. Project completion in a timely fashion and within budget is always a priority. We pride ourselves on providing all our clients with the utmost attention by being available when needed and provide a good customer service experience every time.

We are very interested in working with The City of Edinburg and look forward to helping you with these projects. I am an officer of the firm who is authorized to bind the firm to contract and I can be reached at (956) 380-5152 by phone, (956) 380-5083 by FAX, or ivan@riodeltaengineering.com by e-mail. Please call me if you have any questions regarding this letter or the information presented in the packet.

Sincerely,

Ivan Garcia, P.E., R.P.L.S., C.F.M.
Principal

Submittal is for: ***Main Office***

Rio Delta Engineering is an engineering firm offering general civil engineering and surveying services in the Lower Rio Grande Valley and South Texas. Our staff has a variety of background experience ranging from structural adhesives sales to general contracting and oilfield fracking. This varied experience, coupled with our education in Agricultural and Civil Engineering, allows us to apply common sense and a practical approach to our civil engineering services. We've all heard a contractor say" Sure, everything fits fine on paper, but…" when they encounter a design issue that just doesn't work as well in the ground as it does on the plan. At Rio Delta Engineering, our objective is to deliver a civil engineering project to our client that is practical, cost effective, and buildable within the allotted budget and time frame. Our experience on both sides of the project "table" allows us to communicate clearly to everyone involved with a project the objectives of our plans and designs, from the contractor to the system operator, to the Board or Council member, and on up to the funding agencies.

Insurance:
General Liability ($2,000,000.00)
Professional Liability ($2,000,000.00)
Umbrella/Excess Liability ($1,000,000.00)
Commercial Auto ($1,000,000.00)
Workers Compensation ($100,000/$500,000)

HUB Certification:
We were initially approved as a HUB vendor on November 7, 2005.
(VID number 1830430819200/ File number 045319).
Our current approval expires September 2, 2025.

Affirmative Action Program/Equal Employment Opportunity Affirmative Action/Program Statement of Policy:
It is the policy of Rio Delta Engineering to provide equal employment opportunity in full compliance with the Civil Rights Act of 1964, as amended, the Age Discrimination in Employment Act of 1973, the Veterans Readjustment Act of 1974, and the Presidential Executive Orders of Federal Contract Compliance Programs. This provides for equal employment without regard to race, color, religion, sex, national origin, marital status, age, disability, or veterans status.

3. ***Firm Qualifications and Experience***

Rio Delta Engineering offers professional land surveying services using state of the art technology and equipment. We have an in-house Registered Professional Land Surveyor (RPLS) and can provide prompt responses and full surveying services as may be needed. Some of our deliverables are ALTA, title and boundary surveys, parcel/right-of-way maps for acquisition, appraisals, and condemnation proceedings, metes and bounds/legal descriptions, construction staking for survey alignments of roadways and/or utilities including the establishments of right-of-ways, easements, baselines and legal descriptions, as-built survey, design and construction survey, topographical survey, drone-surveying for aerial photogrammetry and mapping, horizontal and vertical control points (benchmarks) and maps, construction staking, and virtually any surveying and mapping applications our clients have required for their projects.

We also coordinate and perform all surveying activities related to utility conflicts, easement/right-of-way issues, permits, and have experience working with the Hidalgo County Drainage District No. 1, TxDOT, Texas Gas Service, AEP, Spectrum, AT&T, Irrigation Districts, and Magic Valley Electric Coop.

In addition, we have an in-house GIS specialist who plans, develops, and implements systems and databases for storing and accessing geospatial data. We have the capability to create maps and graphs using GIS software and related equipment.

Our approach to projects entails a hefty combination of the latest CADD and GPS technology and equipment, creativity, and an innovative approach towards the problem at hand. By using smartphone's and tablets we have implemented an effective line of real time and direct communication within our company and with our clients. We are able to read and reply to emails immediately, upload/view reports, schedules and photos, have remote access to drawings, budgets, set up meetings, and have live videoconferences to bring solutions and answers to our clients on real time. We also coordinate and perform all surveying activities related to utility conflicts, easement/right-of-way issues, permits, and have experience working with the Hidalgo County Drainage District No. 1, TxDOT, Texas Gas Service, AEP, Spectrum, AT&T, Irrigation Districts, and Magic Valley Electric Coop.

During the course of our 17-year existence, Rio Delta Engineering has dealt with City, County, and State agencies in order to complete our projects. We can work with any person or entity necessary in order to move projects forward to successful completion in a timely manner.

Names, Position, Phone and Fax Numbers of Contact Person:

Depending on the locality of the project, the local office has taken the lead on the project. In this instance, the Edinburg office managed by **Ivan Garcia, P.E., R.P.L.S.**, would be the lead surveyor on any projects. Ivan would provide project management, surveying services coordination and supervision. Ivan would also be primarily responsible for on-site inspections and would be the direct contact with the Owner.

Office Number: (956) 380-5152
Mobile Number: (956) 263-0934
Fax Number: (956) 380-5083
E-mail: ivan@riodeltaengineering.com

Key Personnel's Professional Background, Caliber and Availability

One of our key personnel is **Ivan Garcia, P.E., R.P.L.S.,** who has accumulated over 15 years of experience in the civil engineering and surveying field ranging from supervising construction and design of municipal utilities, drainage, and roadway projects, to managing construction projects for the City of Edinburg, the City of Rio Grande City, Hidalgo County, Starr County, Edinburg CISD and Rio Grande CISD, Union Water Supply Corporation, and North Alamo Water Supply Corporation. Because of his extensive background, Ivan possesses a unique expertise that will contribute to the project's success. Ivan would be the surveyor out of our local Edinburg office, and would provide primary project management and surveying services coordination and supervision. Ivan would also be the direct contact with the Owner.

Organizational Chart and Summary of Work to be Performed by each Staff Member

- Ivan Garcia, P.E., R.P.L.S, C.F.M. – Principal
  As the lead engineer, Ivan would provide primary project management and engineering design and surveying services coordination and supervision. He would also be primarily responsible for on-site inspections and would be the direct contact with the Owner.

- Gilbert J. Guerra, P.E. – Senior Project Manager
  Gilbert would provide surveying and management support to the Edinburg office. He would be the secondary contact with the Owner.

- Julio Gonzalez, Graduate Engineer – Principal
  Julio would provide surveying, construction supervision and management support from the Rio Grande City office. He would also coordinate survey support for the project.

- Norberto Lopez III, Surveyor-In- Training (S.I.T.)
  Norberto would provide surveying support from the Rio Grande City office.

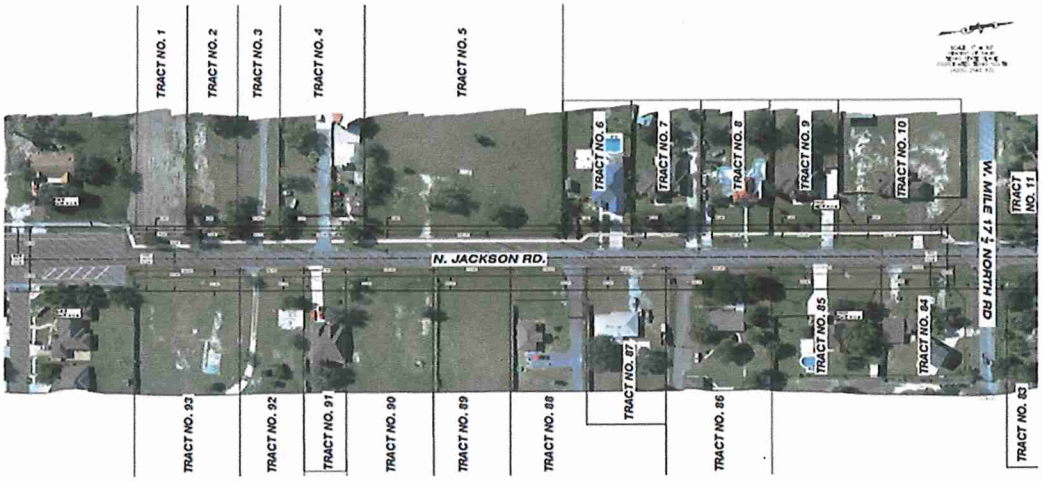
- Roberto Salinas and David Rodriguez, Survey Crew
  As field data collection specialists, Roberto and David would provide field data collection services and construction staking services, for design and construction phases, respectively. Roberto and David work out of the Rio Grande City office.

Staff:	Civil Engineer (P.E.)	2
	Civil Engineer/Surveyor (P.E./R.P.L.S.)	1
	Surveyor-In-Training (S.I.T.)	1
	Graduate Engineer	5
	ACAD Technician/Designer	5
	Field Data Collection	8
	GIS Analyst	1
	Administrative Staff	2
	Total Personnel	**25**

Capacity to Perform

We are very familiar with the City of Edinburg design standards and guidelines, as well as State and Federal regulations, policies and procedures to bring projects to completion while complying with any applicable regulations.

We offer our clients the whole range of surveying services while maintaining the local every day type of availability and service required by our clients. We have an in-house Registered Professional Land Surveyor (RPLS) and can provide prompt responses and full surveying services as may be needed.



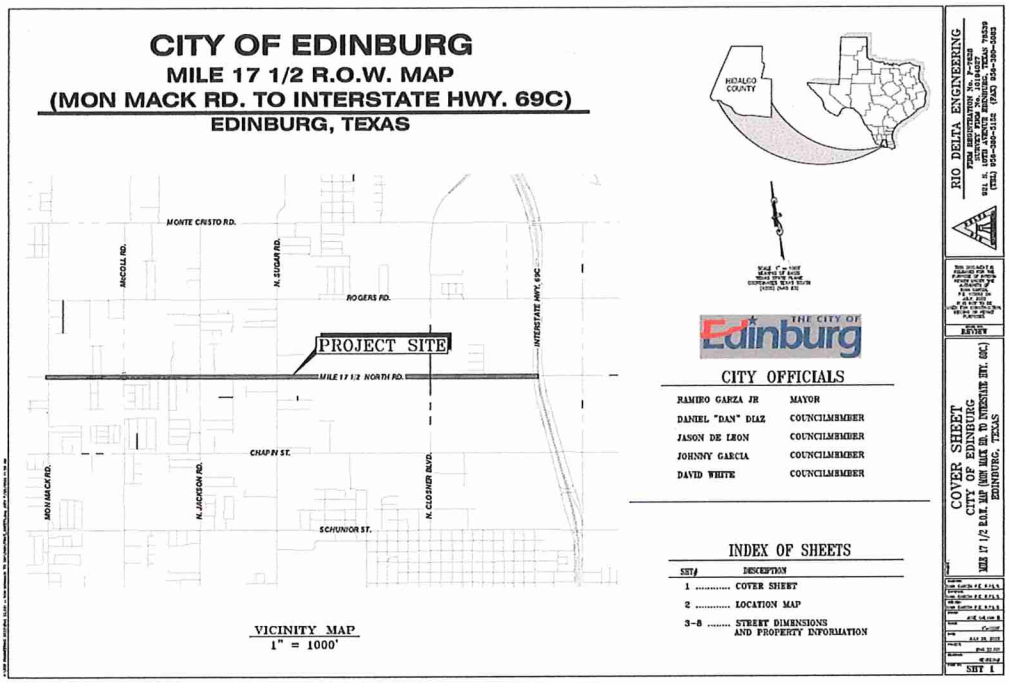
We are confident that, if given the opportunity, we can provide a broad scope of expert engineering services, and with the help of our qualified staff we are sure we can become an essential asset for the City of Edinburg.

Current Workload

Rio Delta Engineering has the capacity to take on any project large or small. Our current work load is such that we can begin work on any project immediately. We have the equipment and office space available with which to expand our personnel and operations as may be required.

Some of the more recent projects that Rio Delta Engineering has provided planning, engineering, surveying, project management, and funding application services for are:

1. **City of Edinburg – North Jackson Road Right-of-Way Project between Saginaw Avenue to Monte Cristo Road – 2023**



This is an on-going project which consists of the expansion/widening of Jackson Road between Saginaw Avenue going north to Monte Cristo Road (1.25 Miles) to alleviate traffic mobility and improve safety to this area of the City. The services provided included producing a survey right-of-way map for the project areas, approximately 90 sets of metes and bounds and survey exhibits as required for acquisition and produce a schematic design plan as required for planning and acquisition. Rio Delta Engineering is responsible for all surveying services for appraisal and acquisition activities. The project is currently going through the right-of-way acquisition phase and funds will be sought for construction early 2025 at a cost of approximately $6,250,000.

2. City of Edinburg, Mile 17 ½ Road Right-of-Way Expansion from Mon Mack Road to US Highway 281 - 2022

This is an on-going project which consists of providing the surveying, administrative, and drafting services necessary to complete the above-named project. The services provided included producing a survey right-of-way map for the project areas as required for planning and acquisition. Rio Delta Engineering is responsible for all surveying services for appraisal and acquisition activities.

3. City of Edinburg – North East Doolittle Road Area Drainage – 2019

This project consisted of the construction of various drainage improvements, including, but not limited to, approximately 2,200 L.F. of 36" and 24" storm drain gravity lines, 2,800 L.F. of excavation/fill and re-grading of road side ditch, and related improvements to alleviate flooding along Doolittle Road between Rogers Road and Russell Road. The improvements were completed at a cost of approximately $387,000 and has been fully operational since the March 2019.

4. City of Roma, Efren Ramirez Paving and Drainage Paving Improvements – 2018

This project consists of widening and paving approximately 2,315 lf of Efren Ramirez Street in Roma, Texas. The work involved includes installing approximately 5,630 lf of drainage improvements and constructing a new 37' B-B street section with curb and gutter. The total cost of this project is estimated to be approximately $1,921,769.00 including environmental assessment, R.O.W. acquisition, engineering, testing, inspection, and construction management. The funding for this project will be provided by the United States Department of Agriculture. All funding application, environmental investigations, and engineering design has been completed. The R.O.W. acquisition is also in the final phases of completion. The project is scheduled to be put out for bid within the next few months. Rio Delta Engineering was responsible for preliminary engineering report, the environmental investigation, the engineering design, and the surveying services for design and R.O.W. acquisition. We will also be responsible for bidding, construction inspection, testing, and project management.

Contact: **Alex Barrera**
City Manager, City of Roma
(956) 849-1411
P.O. Box 947
Roma, Texas 78584-0947

5. North Alamo Regional Wastewater Treatment Plant and Collection System -2019

This project consisted of constructing a new 0.5 mgd activated sludge wastewater treatment plant for North Alamo WSC. The plant is the first phase of what will ultimately be a 20 mgd plant located at the intersection of Minnesota and Goolie roads in Hidalgo County. The plant site is situated to serve an approximately 50 square-mile area roughly bounded by Expressway 83 on the South, Hwy 107 on the North, Expressway 281 on the West, and Mile 6 West (Westgate) on the East. This initial phase cost, approximately $13 million, including planning, acquisition, design, testing, permitting, and construction management. This project was funded jointly by the Texas Water Development Board (TWDB), the Border Environmental Cooperation Commission (BECC/NADBANK), and the Texas Department of Agriculture (TDA). The collection system consisted of approximately 32,000 linear feet of gravity sanitary sewer lines, approximately 15,000 linear feet of force main lines, and four sanitary sewer lift stations. This project provides sanitary sewer service to 471 families in six Colonias and will established the backbone for future expansion and connections within the projected 50 square-mile service area. On this project we coordinated and performed all surveying activities related to utility design, construction staking, as-builts, horizontal and vertical control establishment and verification, conflicts, easement/right-of-way issues, permits, with TxDOT, Hidalgo County Irrigation District #2, Donna Irrigation District, Hidalgo County Drainage District No. 1, Texas Gas Service, AEP, Spectrum, and AT&T.

Contact: **Steven Sanchez**
General Manager, North Alamo WSC
(956) 383-1618
420 S. Doolittle Road
Edinburg, Texas 78542

6. Starr County, Disaster Recovery 2.2, General Land Office (GLO) Paving and Drainage Improvements - 2018

This project consisted of providing paving and drainage improvements at various locations in Starr County. The work included constructing paving and drainage improvements for one street in Pct #4, constructing paving and drainage improvements including a 1.5-acre detention pond in Pct #3, and constructing a pilot channel for approximately 1.5 miles of Los Morenos Creek in Pcts #1 and 2. The total cost of this project was approximately $1,100,000.00, including R.O.W. acquisition, engineering, testing, inspection, and construction management. The funding for this project was provided by the Disaster Recovery Fund 2.2 administered by the Texas General Land Office. All work has been completed except for the pilot channel for Los Morenos Creek. Negotiations for the acquisition of R.O.W. for these proposed improvements has been onerous due to the lack of clear title for most of the properties in this area. This area is in "undivided" Porciones. The project will have to be closed out by the end of the year with whatever progress has been accomplished at that time. Rio Delta Engineering was responsible for all design, bidding, testing, surveying services for appraisal and acquisition activities, and construction management.

Project Approach

At Rio Delta Engineering, our objective is to provide quality engineering services to our client in a timely, professional manner. Our experience in working with a variety of clients, including private developers, municipalities, county agencies, and state agencies has shown us that listening to the client and understanding his needs, is the most important step in the completion of a successful project. To this end, we make it a practice to establish clear and open channels of communication with our clients. The following is a basic outline of the typical approach our firm has towards the successful completion of our projects:

PLANNING AND PRELIMINARY DESIGN:

- Attend all necessary Coordination meetings with Hidalgo County, pertinent Irrigation District, Hidalgo County, and any other jurisdictions required to define the scope of surveying work.
- Prepare Field Topographic Surveys and set benchmarks for horizontal/vertical control
- Prepare boundary/easement surveys as required for acquisition and right-of-entry

CONSTRUCTION PHASE SERVICES

- Provide construction staking services for improvements.
- Provide field topographic survey of completed project for preparation of As-Built Record Drawings.

Rio Delta Engineering uses AutoCAD Civil 3D exclusively but can convert the data to any format that might be necessary. All drafting support would be provided jointly by the Edinburg and Rio Grande City offices. We hope to provide all our clients with the highest quality and professional surveying services and deliver the most efficient and cost-effective solutions to their needs.

4. *Team Member Qualifications and Experience (resumes)*

Ivan Garcia, P.E., R.P.L.S., C.F.M.
Principal, Rio Delta Engineering

Education:

Texas A&M University Kingsville, TX, BS Civil Engineering, December 2008

Licensure & Certifications:

Licensed Texas Board of Professional Engineers, December 2013, P.E.#115662

Texas Board of Professional Land Surveying, May 2014, R.P.L.S. #6496

American Institute of Constructors, March 2012, Associate Contractor (AC)

Work Experience:

May 2009 – Present
Duties:

Rio Delta Engineering
Partner, Civil Engineer, RPLS, Project Manager

- Manages the day-to-day operations of the Edinburg office.
- Supervises the engineering and surveying staff and all engineering design and surveying services.
- Meets with clients to plan, manage, design, and supervise the construction of projects.
- Provides project management for clients, as may be required.
- Attends public meetings in order to present projects for consideration and approval when required and to provide project updates when necessary.
- Coordinates with City, County, and State agencies on behalf of client throughout the course of completing a project.

Summer 2008
Duties:

Texas Department of Transportation, Pharr, TX 78577
Engineering Technician Internship

- Assisted Civil Engineer in application of principles, methods, and techniques of civil engineering technology on the planning and construction of US 83 "Arroyo Roma" bridge, FM 650 "Los Negros Creek" bridge and Garcia St. relocation of utilities in the city of Roma, Texas.

Feb 2006 – Dec 2006

CRC Engineering, Inc., McAllen, TX 78504

Duties:

CADD Technician

- Designed and prepared detailed electronic (CAD) working plans for complex projects from observation, measurements, sketches, specifications, and standard layouts provided by customers, consultants, and/or departmental contacts.

Gilbert J. Guerra, P.E.
Senior Project Manager

Education:
Texas A&M University, College Station, TX, BS Agricultural Engineering, May 1985

Licensure & Certifications:
Licensed by the Texas Board of Professional Engineers, July 2002, P.E. #90156
Licensed by the Alabama Board of Professional Engineers, February 2008, P.E. #29229

Military Service:
United States Marine Corps, 1976-1982, Honorable Discharge, E-5

Work Experience:

Jul 2005 – Present — **Gilbert J. Guerra Engineering, LLC dba Rio Delta Engineering**

Duties: Owner, President, Civil Engineer, Project Manager

- Supervises the engineering and drafting staff and all engineering design.
- Coordinates with City, County, and State agencies on behalf of the client throughout the course of completing a project.
- Consultant for Rio Grande City (8yrs)
- Consultant for Union Water Supply Corporation (7yrs)

Feb 2004 – Jun 2005 — **Rio Delta Engineering & Surveying**

Duties: Vice President, Resident Engineer

- Supervised the engineering and drafting staff and all engineering design.
- Coordinated with City, County, and State agencies on behalf of the client throughout the course of completing a project.

Aug 1996 – Feb 2004: — **J.E. Saenz & Associates, Inc., Edinburg, TX**

Duties: Director of Engineering

- Supervised the engineering and drafting staff and all engineering design.
- Coordinated with City, County, and State agencies on behalf of the client throughout the course of completing a project.
- Provided construction management and supervision on City construction projects.
- Provided field engineering services for the City on projects undertaken by City utility and street paving crews.
- Provided engineering reports, certifications, design and permitting services to the City for City construction projects.

Principal, Rio Delta Engineering

Education:

Texas A & M University Kingsville, BS Civil Engineering, December 2010

South Texas College, Associate of Mathematics and Science, May 2008

Work Experience:

July 2011 – Present
Duties:

Rio Delta Engineering
Graduate Engineer, Partner, Project Manager

- Manages day-to-day operations of the Rio Grande City office.
- Supervises the engineering and surveying staff and all engineering design and surveying services in the Rio Grande City office.
- Meets with clients to plan, manage, design, and supervise the construction of projects.
- Provides project management for clients, as may be required.
- Attends public meetings in order to present projects for consideration and approval when required and to provide project updates when necessary.
- Coordinates with City, County, and State agencies on behalf of client throughout the course of completing a project.

Jan 2005 – Dec 2008
Duties:

Construcciones en General, Camargo, Tamaulipas
Project Manager

- Supervised site work for paving as well as sewer build outs.
- Prepared bid proposal for project bidding.
- Managed budget and expenses.

Jun 2004 – Dec 2004
Duties:

COMAPA, Camargo, Tamaulipas
Technician

- Performed analysis of potable system and wrote reports on improvements.

Norberto Lopez, Surveyor-In-Training (S.I.T.)

Education:

University of Texas, Rio Grande Valley, BS Civil Engineering, May 2017

Work Experience:

March 2018 – Present
Duties:

Rio Delta Engineering
Graduate Engineer

- Meets with clients to plan, manage, design, and supervise the construction of projects.
- Provides project management and inspection for clients, as may be required.
- Attends public meetings in order to present projects for consideration and approval when required and to provide project updates when necessary.

Edwin Pena, Graduate Engineer

Education:

University of Texas, Rio Grande Valley, BS Civil Engineering, May 2020

Work Experience:

January 2017 – Present
Duties:

Rio Delta Engineering
Graduate Engineer

- Meets with clients to plan, manage, design, and supervise the construction of projects.
- Provides project inspection for clients, as may be required.
- Attends public meetings in order to present projects for consideration and approval when required and to provide project updates when necessary.

   City of Edinburg
   415 W. University Dr.
   Edinburg, Texas 78541
   (956) 388-8955

   Rio Delta Engineering serves as one of Consulting Engineers and Surveyors on rotation for the City of Edinburg. We provide on-call engineering and surveying services related to water distribution systems, sanitary sewer collection systems, and paving and drainage improvements. We attend all City meetings and provide reports to the Council as needed. We coordinate with staff on the day-to-day needs as they relate to our engineering and surveying services. We provide engineering design, surveying, and construction and contract management services for those projects that are bid out.

2. Eloy Vera, Jr.
   County Judge
   Starr County
   100 N. FM 3167
   Rio Grande City, TX 78582
   (956) 716-4800

   Rio Delta Engineering has provided engineering and surveying consulting services to Starr County for the past 17 years. We have designed, advertised, bid out, and provided construction and contract administration for paving projects, sanitary sewer collection systems projects, drainage projects, a solid waste transfer station, and subdivision review. Most of these projects were funded by Federal and State agencies. We have assisted the County Staff with funding applications, permit renewals and permit modifications for the Starr County Solid Waste Transfer Station.

4. Robert Estrada, AIA
Former District Architect
Edinburg Consolidated Independent School District (ECISD)

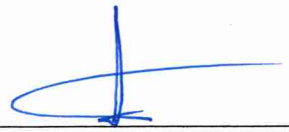
Rio Delta Engineering has completed a multitude of paving projects for the ECISD. RDE was the project engineer for the 2008-2009 ECISD Bond Project. Our work consisted of first providing site feasibility studies for one middle school site and four elementary school sites. We then provided surveying services for property acquisition and platting services for four of the sites. RDE also provided site-civil and off-site utility and paving improvements for the four elementary schools. This work entailed widening roads in the County, widening streets in the City of Edinburg, rerouting a Hidalgo County Irrigation District No. 1 irrigation canal by taking it underground so as to provide an on-grade crossing of a newly opened County road. Throughout the project RDE provided coordination between the ECISD, Hidalgo County Pct. #4, the City of Edinburg, the City of McAllen, Hidalgo County Drainage District #1, and Hidalgo County Irrigation District #1 and the Santa Cruz Irrigation District at different times.

6. *Insurance and Certifications*

Insurance:

General Liability ($2,000,000.00)
Professional Liability ($2,000,000.00)
Umbrella/Excess Liability ($1,000,000.00)
Commercial Auto ($1,000,000.00)
Workers Compensation ($500,000.00)

HUB Certification:
We were initially approved as a HUB vendor on November 7, 2005.
(VID number 1830430819200/ File number 045319).
Our current approval expires September 2, 2025.



(Certificates are attached)

Pending Litigation:

Rio Delta Engineering is not currently under any type of legal litigation related to any professional services rendered by the firm.

7. ***Professional Services Agreement***

I have read the Professional Services Agreement and agree to meet the City's insurance requirements should Rio Delta Engineering be selected to provide engineering and/or surveying services to the City. If selected, Rio Delta Engineering will enter a professional services agreement with the City. As a Partner in Gilbert J. Guerra Engineering, LLC, dba Rio Delta Engineering, I am authorized to commit the firm to such an agreement.

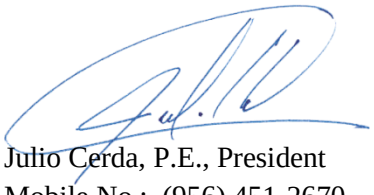
Edinburg, Texas 78539

RE: RFQ No. 2024-7 Land Surveying Services Rotation



Dear Mr. Hinojosa:

R.O.W. Surveying Services, L.L.C. is pleased to present our qualifications and offer our Professional Land Surveying services in response to the City of Edinburg's Request for Statement of Qualifications for Land Surveying Services Rotation, RFQ No. 2024-7. **R.O.W. Surveying Services, L.L.C.** is a Rio Grande Valley Surveying firm, who has the experience, knowledge, and resources to provide a professional solution for the City of Edinburg's request for professional surveying services. As president of **R.O.W. Surveying Services, L.L.C.,** I have 26 plus years of experience in the public sector, where I have the awareness to work with yearly budgeted funding accountability. I have a Registered Professional Land Surveyor, Victor Trevino, on staff who has over 11 years in land surveying service experience. Our commitment to client service and excellent communication has allowed our company to maintain a constant client base throughout the Rio Grande Valley.

Our goal is to provide the City of Edinburg with surveying services in a timely manner within the appropriated project budget and resources provided. We can satisfy project requirements with our comprehensive team experience and our innovative approach to project design and delivery. The **R.O.W. Surveying Services, L.L.C.** program is structured to match the staffing needs to the project size. We are readily available to augment any surveying services. It is our mission to offer a strong pro-active Surveying firm that will successfully complete the upcoming surveying project. We appreciate the opportunity to submit this Statement of Qualifications.

We are eager and committed to provide professional services to the City of Edinburg with any Land Surveying Services needed for two (2) years. We thank you for the opportunity to provide you with our professional services. We did not receive any addendums or viewed any posted on the City of Edinburg's procurement portal. We acknowledge that this Statement of Qualifications has been prepared as per the requirements of the posted Request for Statement of Qualifications for Land Surveying Services Rotation, RFQ No. 2024-7.

Sincerely,

Julio Cerda, P.E., President
Mobile No.: (956) 451-2670

FIRM QUALIFICATIONS AND EXPERIENCE:

R.O.W. Surveying Services, L.L.C. (ROWSS) was incorporated on March 11, 2013. ROWSS has only one location at 900 S. Stewart Road, Suite #13, Hidalgo County, Mission, Texas 78572 where all services are provided to our clients. ROWSS offers a full range of custom surveying and mapping products to meet your project specifications. ROWSS combines its experience, qualifications, and resources to solve the most challenging problems to deliver the best value to our clients. ROWSS is dedicated to providing professional land surveying services to a diverse clientele, including government agencies, private land owners, real estate attorneys and agents, contractors and other design professionals throughout the Rio Grande Valley. Our primary goal is to provide surveying services in a timely manner within the appropriated project budget and resources provided. ROWSS has extensive experience in but not limited to:

- control surveys
- property acquisition plats
- preparing right-of-way maps
- design cross sections
- topographic surveys
- producing digital terrain models for engineering design
- horizontal and vertical control for aerial mapping
- construction and right-of-way staking
- miscellaneous surveys

Our staff includes professional land surveyors, survey technicians, CAD operators and administrative personnel. Each staff member brings a strong sense of teamwork along with excellent communication skills and proven expertise in the multifaceted field of land surveying. The ROWSS team has experience working on numerous projects throughout the Rio Grande Valley for the past 26 years. Our team members are also natives of Hidalgo County, making them very knowledgeable of the geographical area. We have worked in all terrain within Hidalgo, Cameron and Starr County. We have the resources and expertise to adapt to any environment. Hidalgo, Cameron, and Starr County are unique to the rest of Texas when it comes to the original establishment of Lot and Boundary lines. We have faced challenges in boundary reconstruction such as the 10th St. Road expansion project that cut through Las Alamedas Subdivision, performed control and design survey for the Mission Inlet Pilot channel from Conway to the Main Flood Way East of Jackson Road, and retraced Irrigation District Canal Right of Way in the City of Peñitas, Texas.

The ROWSS team currently has 90% availability to begin working on projects for the City of Edinburg immediately. ROWSS's Registered Professional Land Surveyor is always available for consultation or surveying services. Our Team has access to four (4) survey field crews that can easily be engaged to begin any given assignment and can commence work on simultaneous projects as required. We currently have four (4) computer Workstations with Bentley Powercivil Select Series 2 software to accommodate DGN or DWG format deliverables. ROWSS is structured to match the staffing needs to the project size. We are readily available to augment any surveying services. It is our mission to offer a strong pro-active Surveying firm that will successfully complete the upcoming surveying project.

Understanding of the Project:

R.O.W. Surveying Services, L.L.C. (ROWSS) understands that City of Edinburg is seeking to contract with a Licensed Professional Land Surveying Firm on an "as needed" basis with experience in, but not limited to, the following areas: topographic, boundary, platting preliminary, and all other necessary land surveying tasks, as specified by the City. The services may be requested by City on a project-to-project basis, which may require from one (1) day to several months to complete. As Surveyors, will be expected to perform the services in accordance with the Scope of Services and in accordance with the requirements of this solicitation and perform at a minimum the following tasks:

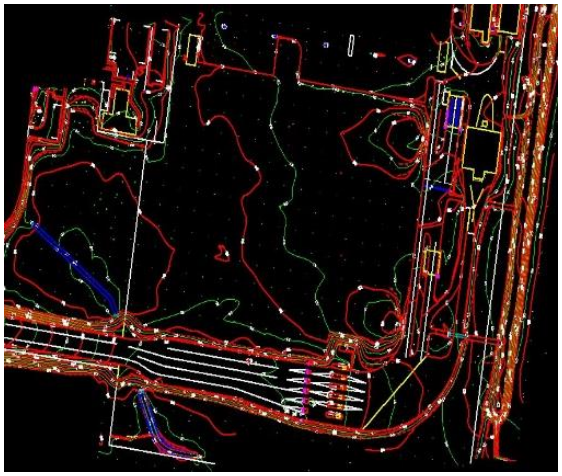
1. Boundary lines, giving length and bearing on each straight line; interior angles; radius, point of tangency, and length of curved lines. Set iron pin (monument at property corners where none exists); drive pin 18" into ground, mark with wood stake; state on drawing whether corners were found or set and describe each.
2. Legal description, including measurements in recorded deeds for comparison with observed.
3. Area in square feet if less than one acre, in acres (to 0.001 acre) if over one acre.
4. Identify, jurisdiction and width of adjoining street and highways, width and how paved. Identity of landmarks.
5. Plotted location of structures on the property and on adjacent property within 30 feet. Dimension perimeters in feet and inches to nearest ½. State character and number of stories. Dimension to property lines and other buildings. Vacant parcels shall be noted "Vacant".
6. Encroachments, including cornices, belt courses, etc., either way across property lines.
7. Fences and walls; describe. Identify party walls and locate with respect to property lines.
8. Recorded or otherwise known easements and right-of-way; state owner of right.
9. Possibilities of prescriptive right-of-way and nature of each.
10. Anticipated street widening.
11. Individual lot lines and lot and block numbers. Street numbers of buildings.
12. Sidewalks, curbs, gutters & drives on the block and extend to include the same across boundary streets.
13. Building line and setback requirements, if any.
14. Names of owners of adjacent property.
15. Reconciliation or explanation of any discrepancies between survey and recorded legal description.
16. Title searches and title reports.
17. Right-of-way acquisitions.

Topographical Survey Requirements:

1. All lines of levels shall be checked by separate check level lines or on previous turning points or benchmarks.
2. Traffic devices, signs, in connection with boundary streets.
3. Future plans of City, Utility Districts, and Municipal Utilities when such information is discovered in routine information gatherings.
4. Minimum of one permanent benchmark on site for each ten or less acres; description and elevation to nearest 0.01'.
5. Contours at 1 foot intervals; error shall not exceed one-half contour interval.
6. Spot elevations at each intersection of a 20 foot square grid covering the property and if possible 5 foot grid interval(s) beyond.
7. Spot elevations at street intersections and at 5 feet on center on curb, sidewalk, and edge of paving including far side of paving. If elevations vary from established grades, state established grades, state established grades also.
8. Plotted location of structures, man-made and natural features; floor elevations at each entrance of building on property.
9. Location, size, depth and pressure of water and gas mains, and other utilities serving or on the property, valves, meters.
10. Location of fire hydrants available to property and size of main serving each.
11. Location of electric and telephone services and characteristics of service available.
12. Location, size, depth and direction of flow of sanitary sewers, storm drains and culverts serving or on property; location of catch basins and manholes and inverts of pipe at each; same at or in boundary streets.
13. Name of operating authority of each utility.
14. Mean elevation of eater in any excavation, well or nearby body; flood level of streams.
15. Extent of watershed onto property. Probability of freshets overrunning the site.
16. Locations of test borings if ascertainable and elevation of top of holes.
17. Trees of 3" and over (Caliper 3' above ground) locate within 1' tolerance and give species.
18. Perimeter outline only of thickly wooded areas unless otherwise directed.
19. Location, size, elevation of elevated: piping insulated piping, conduit, pipe racks and supports; except that above building roofs.
20. Show dimensions and bearings of property boundaries, and plot all locatable title exceptions and easements on the survey map.
21. Show existence or non-existence of any encroachments and right-of-way.
22. The written legal description of the property and exhibit(s) for recording purpose.

23. Provide an area measurement within boundary lines.
24. Easements – all utility, city and private easements shall be shown and labeled.
25. Legal description and exhibit(s) for any easements where required.
26. Setbacks – building and parking setbacks shall be shown and noted for each property or zoning areas.
27. All above grade utilities, including but not limited to overhead electrical, telephone, cable, street lighting, and other electrical and communications equipment; location and rim elevations of sanitary and storm sewer structures, water main valves, and hydrants; gas valves and all other above grade utility equipment.
28. All underground utilities, including but not limited to storm, sanitary, water, gas, telephone, electrical, and cable. Rim elevation, bottom of manhole, and all in and out inverts of utilities shall be noted. Note: If any of these utilities do not exist within or directly adjacent to the survey area, Surveyor shall locate the nearest available service connection which can be used for future service to site.
29. Provide on the survey a list of names, addresses, and phone numbers of all applicable utility companies.
30. Trees, shrubs, and planting areas: all trees 2" caliper and larger shall be labeled with caliper and species. All tree canopies shall be accurately shown.
31. All trees 6" caliper and larger shall be labeled with caliper and species. All tree canopies shall be accurately shown and areas of woods or shrubs accurately delineated.
32. Zoning of the property and all adjacent properties within 100' of the surveyed area.
33. Provide planning and zoning overlays.
34. Currently flood plain information including FEMA Regulatory 100-year and 500-year floodplain boundaries, notation of record flood event elevation (2008 flood), 100-year flood elevation and other DNR protested area boundaries.
35. All measurement tolerances provided on such surveys must be within readings for urban survey as specified on accuracy standards for alta/acsm land title surveys.
36. When a significant discrepancy with the record maps and documents are found, or if monuments are set or if otherwise required by law, surveyor shall provide a "record of survey map" compliant with City and State standards.
37. Elevation certificate for flood insurance purpose (FEMA) coordination & documentation associated with phase I and phase II real estate.
38. All firms may not be capable of providing the above noted services. If your firm is capable and willing to provide any of the above services, a complete description of the nature of the service the firm is qualified to provide must be provided in your qualifications.
39. All other topographic surveying as assigned.

Recent Experience:



Procedures and formats indicated in the RFQ will be respected and followed. It is with understanding that we are to provide services, but not limited to the items outlined in the "Scope of Work" identified in RFQ. Standards and procedures outlined will be followed with respect to local, state, federal, and professional board rules and guidelines. ROWSS has the management experience and technical expertise to follow through with all minimum requirements of services stated. A brief Boundary/Topographic survey project outline is provided in the following paragraphs.

Coordination with the City of Edinburg and its representatives will be the first step to identify and review the project scope of services. A thorough understanding is important before onsite surveying can begin. ROWSS will ask for any resources the City of Edinburg may have that will be beneficial to the Surveyor. Coordination with onsite utility companies and municipalities will be made to mark and identify underground drainage, sewer, water, gas, telephone, and any other utility servicing project site. Project examples are as follows:

La Joya Outfall South Basin (US 83 to Military Road)

Contact Person: Reza Badiozzamani, P.E., L & G Engineering, 900 S. Stewart Road, Suite #6, Mission, Texas 78572, Telephone No.: (956) 585-1909, Survey Contract Amount: $58,851.00. The following are steps ROWSS has taken in a design survey for the La Joya Outfall South Basin. Final deliverables included establishing Horizontal and Vertical control from US 83, South to Military Road and topographic engineering design deliverables for new drainage outfall construction. Horizontal and Vertical control tied to the TxDOT La Joya Relief Route Project. Once project scope and limits delineated by Engineering consultants and approved by Hidalgo County, field crews began to establish a control network using the latest Leica Global Positioning Systems and Robotic Instruments. Our field crews and staff are professionally trained in Real Time Kinematic and Static survey procedures utilizing the latest Leica Global Positioning System (GPS) technologies.

GPS data will be processed with Leica Infinity and Geo Office software to adjust and check for any blunders or bad positions in the collected data. A Leica DNA digital level utilized to run a project bench loop establishing vertical values on project control. Once the Horizontal and Vertical Network has been completed boundary monuments recovered and tied to project control.

Field crews then begin the topographic survey identified by scope, measuring all physical improvements, significant trees, utilities, and drainage features. Field work processed daily for quality assurance and quality control.

Once existing boundary lines established and topographic survey completed, office staff begin production of final design deliverables. Digital and hard copy files delivered to the Hidalgo County engineering sub consultant per requested format. Key personnel on project: Julio Cerda (Project Manager/Client Contact), Kurt Schumacher (former R.P.L.S./Manager), Victor Trevino (Survey Technician), Jason Luna (CAD Technician), Daniel Marquez and Arturo Reyna (Survey Crew Chiefs).

Hidalgo County Regional Linear Park Project

Contact Person: David Saenz, P.E., L & G Engineering, 900 S. Stewart Road, Suite #6, Mission, Texas 78572, Telephone No.: (956) 585-7117, Survey Contract Amount: $154,51.00. ROWSS is contracted for Right of Way mapping and parcel acquisition descriptions for the Hidalgo County Regional Linear Park Project. Project limits run from San Antonio Avenue (San Juan) to Moore Road (Pharr). Project scope to produce a Right of Way map and metes and bounds descriptions for approximately 33 parcels along existing Hidalgo County Drainage District Right of Way easement. A brief project approach for this and other right of way surveys with parcel acquisition as follows:

Abstract research is the first step in the mapping process. All recorded information, such as utility maps, subdivision plats, and deed records researched at the Hidalgo County Clerk. A request will be made to Irrigation and Drainage Districts for information within project limits. Appraisal district information utilized to identify current ownership. Survey Technicians, under direction from the RPLS, begin to develop a preliminary project base map identifying all ownership and easements along project route. When base map completed, field crews begin recovering and locating boundary monuments.

Once the field survey has been completed, the RPLS analyzes and prepares a boundary resolution to establish existing and proposed right of way lines. CAD technicians then begin detailing base map for right of way sheets for parcel exhibits needed for acquisition. When project base map identifying all parcels and utilities in conflict completed, a preliminary submittal is sent to Hidalgo County and/or their representatives for review. When preliminary map redlines are returned, preparation for final deliverables can begin. Deliverables will be delivered to Hidalgo County and/or their representatives. Proposed right of way monuments will be set.

Once the map has been approved by Hidalgo County, parcel descriptions and sketches will begin. Sketches and descriptions will check for closure error and grammatical errors. Once QA/QC has been completed, signed and sealed Parcel sketches and legal descriptions will be delivered. Key personnel on project: Julio Cerda (Project Manager/Client Contact), Kurt Schumacher (former R.P.L.S./Manager), Victor Trevino (Survey Technician), Jason Luna (CAD Technician), Daniel Marquez and Arturo Reyna (Survey Crew Chiefs).

10th Street Expansion Project (2015)

Contact Person: Robert Macheska, P.E.; L & G Engineering, 900 S. Stewart Road, Suite 10, Mission, Texas 78572, Telephone No.: (956) 585-1909, Survey Contract Amount: $130,000.00. ROWSS contracted for Right of Way mapping, parcel surveys, metes and bounds descriptions, and title reports for the 10th Street Expansion Project. Project limits run from State Highway 107 to Monte Cristo Road (FM 1925). Project scope to produce a Right of Way map and metes and bounds descriptions for approximately 63 parcels along 10th Street Expansion Right of Way easement. The project was finalized in February, 2015. A brief project approach for this and other right of way surveys with parcel acquisition as follows:

Abstract research is the first step in the mapping process. All recorded information, such as utility maps, subdivision plats, and deed records researched at the Hidalgo County Clerk. A request will be made to Irrigation and Drainage District for information within project limits. Appraisal district information utilized to identify current ownership. Survey Technicians, under direction from the RPLS, begin to develop a preliminary project basemap identifying all ownership and easements along project route. When base map completed, field crews begin recovering and locating boundary monuments.

Once the field survey has been completed, the RPLS analyzes and prepares a boundary resolution to establish existing and proposed right of way lines. CAD technicians then begin detailing basemap for right of way sheets for parcel exhibits needed for acquisition. When project basemap identifying all parcels and utilities in conflict completed, a preliminary is sent to Hidalgo County and/or their representatives for review. When preliminary map redlines are returned, preparation for final deliverables can begin. Deliverables will be delivered to Hidalgo County and/or their representatives. Proposed right of way monuments will be set.

Once the map has been approved by Hidalgo County, parcel descriptions and sketches will begin. Sketches and descriptions are checked for closure error and grammatical errors. Once QA/QC has been completed, signed and sealed Parcel sketches and legal descriptions will be delivered. Key personnel on project: Julio Cerda (Project Manager/Client Contact), Kurt Schumacher (former R.P.L.S./Manager), Victor Trevino (Survey Technician), and Arturo Reyna (Survey Crew Chief).

Ware Road for the State of Texas (2014/2015)

Contact Person: Velma Garcia, Project Manager, L & G Engineering, 2100 W. Expressway 83, Mercedes, Texas 78570, Telephone No.: (956) 565-9813, Survey Contract Amount: $192,000.00. Responsible for right-of-way retracement of approximately 2.4 miles of highway. Provided recovery of and re-establishment of existing centerline and right-of-way monuments, conducted deed research, analysis of right-of-way, monumentation of right-of-way with over 25 new monuments set, and provided right-of-way maps. Parcel Plats, Metes and Bounds descriptions, and final ROW deliverables. Supervised technical drawings for delivery to TxDOT. Key personnel on project: Julio Cerda (Project Manager/Client Contact), Kurt Schumacher (former R.P.L.S./Manager), Victor Trevino (Survey Technician), and Arturo Reyna (Survey Crew Chief).

Highland Sewer Redirect Phase II for S.J. Louis Construction of Texas, Ltd.(2015)

Contact Person: Robert "Derrick" Gage, Project Manager, S. J. Louis Construction of Texas, LTD., 10515 Gulfdale Street, Suite #111, San Antonio, Texas 78216, Telephone No.: (210) 340-9998, Survey Contract Amount: $24,166.96. Responsible for providing Submerged Utility locations to include sketches, X, Y, Z locations, and utility descriptions at areas indicated per exhibit. PVC pipe were left in place to mark exposed area. Provided centerline construction staking at 100 foot intervals and at all bends/P.I.'s of proposed sewer alignments for Phase II. Contract Owner of Project is the McAllen Public Utility. Key personnel on project: Julio Cerda (Project Manager/Client Contact), Kurt Schumacher (former R.P.L.S./Manager), and Victor Trevino (Survey Technician).

TEAM MEMBER QUALIFICATIONS AND EXPERIENCE:

Julio Cerda, P.E. (Project Manager)

Mr. Cerda is the Principal in charge and primary contact for R.O.W. Surveying Services, L.L.C. He provides a broad spectrum of experience in managing staff and communicating with clients. He also serves as the Quality Assurance and Quality Control Manager.

Victor Trevino, P.E., R.P.L.S. (Project Engineer & Land Surveyor)

Mr. Trevino is the Registered Professional Land Surveyor and Survey Manager for R.O.W. Surveying Services, L.L.C. Responsibilities include client communication, managing field and office staff, proposal writing, and QA/QC. He is proficient with Microstation CAD software. He is responsible for directing and supervising CAD technicians and processing field data daily.

Jonathan D. Garcia, Graduate Engineer (Survey Technician)

Jonathan is a survey technician. He is proficient with Microstation CAD software. He also assists with directing and supervising CAD technicians and processing field data daily.

Bryan G. Guzman, Graduate Engineer (Survey Technician)

Bryan is a survey technician. He is proficient with Microstation CAD software. He also assists with directing and supervising CAD technicians and processing field data daily.

Gerardo Valdez, Graduate Engineer (Survey Technician)

Gerardo is a survey technician. He is proficient with Microstation CAD software. He also assists with directing and supervising CAD technicians and processing field data daily.

Omar Tijerina, Graduate Engineer (Survey Technician)

Omar is a survey technician. He is proficient with Microstation CAD software. He also assists with directing and supervising CAD technicians and processing field data daily.

Richard Gonzalez, Survey Crew Chief

Richard supervises the field crew perform boundary, construction, and topographic surveys. He performs field calculations and field reports with over seven (7) years of experience.

Julio C. Cerda, P.E.
Project Manager

Mr. Cerda has over 26+ years of experience in the design and management of various public improvement projects. For the past eight years Julio served as City Manager for the City of Mission overseeing the operations of the City Engineer and Public Works Director. He has previously worked as a City Engineer for the City of Mission and previous to that for the City of Harlingen. In between working for these cities, he worked as the Asst. Cameron County Engineer overseeing several drainage and roadway projects. Previous to all, he worked for the Texas Department of Transportation as a design engineer. With positions of head of departments in all of these entities provided him with excellent hands-on experience with government projects. Julio has been able to take his work experience and utilize it to provide effective engineering services. Furthermore, Julio has worked extensively on the detailed design and development of numerous roadway and drainage projects. He has designed and developed roadway geometrics, traffic control plans, Storm Water Pollution Prevention Plans (SW3P), signing and pavement marking layouts, culvert and storm sewers, general notes, estimates and specifications and coordinated adjustments of conflicting utilities. Julio is also very familiar with Texas Department of Transportation, Federal Highway Administration, Hidalgo County and AASHTO regulations and design criteria. Julio also has extensive experience coordinating with utilities and local irrigation and drainage districts in Hidalgo County.

PROJECTS:

Inspiration Rd/Military Pkway: This Project consist of field surveys for engineering from US 83 to Military Pkway. Responsible for right-of-way retracement of approximately 4.46 miles of highway. Provided recovery of and re-establishment of existing centerline and right-of-way monuments, conducted deed research, analysis of right-of-way, monumentation of right-of-way with new monuments set, and provided right-of-way maps. Parcel Plats, Metes and Bounds descriptions, and final ROWSS deliverables. (Julio Cerda, P.E.) served as the Project & Design Manager for this project. Mr. Cerda implemented QA/QC.

Mile 10 Road (Mile 6 to SH 1015): This Project consist of field surveys for engineering from Mile 6 to SH 1015. Responsible for right-of-way retracement. Provided recovery of and re-establishment of existing centerline and right-of-way monuments, conducted deed research, analysis of right-of-way, monumentation of right-of-way with new monuments set, and provided right-of-way maps. Parcel Plats, Metes and Bounds descriptions, and final ROWSS deliverables. (Julio Cerda, P.E.) served as the Project & Design Manager for this project. Mr. Cerda implemented QA/QC.

Mile 11 North & FM 1015-2018 Bond Referendum Project #22 (6.5 Miles): Hidalgo County Precinct, July 1, 2019-Ongoing. This project consisted of making improvements of 6.5 miles of channels, including local detention systems and pump station. **Project Scope:** STIG (Julio Cerda, P.E.) served as the Project & Design Manager for this project. Duties included establishing benchmark identifications and tie into approved USGSSSS, FEMA or County Benchmark data; obtain data of existing drainage facilities and/or structures, including size, type, and flowline (upstream & downstream) elevations of structures; obtain profiles of intersecting roadways that cross existing and proposed channels; obtain data for all existing or proposed utilities that may affect the project, including but not limited to water lines, sewer lines, gal lines, telephone lines, cable lines, etc.; obtain flood plain and cross-section (along with appropriate overbank data), and establish reach lengths, as required; primary project control points (horizontal and vertical control points) and secondary control points; and coordinate with various agencies; data collection. Mr. Cerda implemented QA/QC.

11 years

Mr. Treviño provides field and office surveying expertise, performs surveys, supervises crews, and coordinates operations with land developers and governmental agencies. He has experience in vertical and horizontal control, topography, cross sections, photogrammetric ground control, boundary surveys and construction layout. Mr. Treviño has over ten (11) years of professional surveying experience and management, design, street and utilities and land development projects. His experience includes developing construction plans for approval by the engineer, platting and permitting and managing construction projects. Mr. Treviño has worked as a project designer in new subdivisions for developers, calculating storm water detention and pipe sizes, designing water distribution, wastewater collection systems, street and roadway development, cost estimates, and cost-efficient recommendations.

PROJECTS:

MISSION, TEXAS 78572
TEL.: (956) 424-3335
FAX.: (956) 424-3132

Qualifications:

Mr. Garcia has 7+ years of experience as a Graduate Engineer in the civil infrastructure area in project that vary from residential & commercial developments to roadways & utilities locate. Mr. Garcia is knowledgeable in all aspects of surveying including CADD software design, preparing legal descriptions, problem-solving, and research.

Project Experience:

Mayfair Residential Subdivision, Mission Texas. Assist Professional Engineer in the development of an 83 Lots Residential Subdivision located in the City of Mission, Texas. The duties involved vary from collecting topographic information, deed research, preliminary design for map layout, design utilities according to the City of Mission design parameters, calculate construction estimates, coordinate construction with the contractor, recording of the documents such as easements, boundaries and final plat.

Carrizales Residential Subdivision, Mission Texas. Assist Professional Engineer in the development of an 48 Lots Residential Subdivision located in the City of Mission, Texas, ETJ. The duties involved vary from collecting topographic information, deed research, preliminary design for map layout, design utilities according to the City of Mission design parameters, calculate construction estimates, coordinate construction with the contractor, recording of the documents such as easements, boundaries and final plat.

Palo Alto Residence Phase 1 & 2 Residential Subdivision, Brownsville Texas. Assist Professional Engineer in the development of an 124 Lots Residential Subdivision located in the City of Brownsville, Texas. The duties involved vary from collecting topographic information, deed research, preliminary design for map layout, design utilities according to the City of Brownsville design parameters, calculate construction estimates, coordinate construction with the contractor, recording of the documents such as easements, boundaries and final plat.

FM 1925 Road (10th Street to McColl Road) San Benito, Texas. Survey Technician responsible for deed research, abstract maps, sketch 38 parcels plats, parent tract, metes and bounds descriptions & closure report.

US 77 83 South Parallel Corridor (FM 2520-FM 1577), San Benito, Texas. Survey Technician responsible for deed research, abstract maps, sketch 45 parcels plats, parent tract, metes and bounds descriptions & closure report.

Taylor Rd Water and Sewer Adjustments, McAllen, Texas. Assist in the relocation of Water & Sewer Utilities. Duties involved vary from locate Utility companies for information of the existing utilities, collect & process topographic information, mapping of the existing conditions, design the proposed improvements, sketch the construction sheets and calculate the estimate the construction cost.

Bryan G, Guzman Hdz, Graduate Engineer
(Survey Technician)

EDUCATION

Facultad de Ingenieria Civil, UANL – San Nicolas De Los Garza, Nuevo Leon.

Graduation Year 2017

Master in Environmental Engineering, Facultad de Ingenieria Civil, San Nicolas De Los Garza, Nuevo Leon
Master's Student 2019-2021

YEARS OF EXPERIENCE

9+ Years

Qualifications:

Mr. Guzman has over 9+ years of experience as a Graduate Engineer with a background in the design and development of pluvial systems, sanitary systems, storm analysis, and hydraulic works, He also has knowledge in the design of water treatment plants, solid waste disposal and environmental impact studies. Mr. Guzman has knowledge of specialized hydraulic design software such as: Microstation, Geopak, AutoCAD, Civil3d, Flowmaster, HEC-RAS and HEC-HMS.

Project Experience:

Alberto Road, Edinburg, Texas.
Assist Professional Engineer in designing the pavement levels, the sanitary system, the pluvial system and the water supply system, as well as the development of the required detention pond volume. My activities consisted of the development of construction plans, profiles, and information about the lot to be subdivided, information on the parameters required by the City of Edinburg.

Taylor Road, McAllen, Texas.
Assist Professional Engineer in designing the pavement levels, the sanitary system, the pluvial system and the water supply system, as well as the development of the required detention pond volume. My activities consisted of the development of construction plans, profiles, and information about the lot to be subdivided, information on the parameters required by the City of McAllen.

Project 22, Weslaco, Texas.
Assist Professional Engineer in designing the pavement levels, the sanitary system, the pluvial system and the water supply system, as well as the development of the required detention pond volume. My activities consisted of the development of construction plans, profiles, and information about the lot to be subdivided, information on the parameters required by the City of Weslaco.

The woods at Los Fresnos Subdivision, Los Fresnos, Texas.
Assist Professional Engineer in designing the pavement levels, the sanitary system, the pluvial system and the water supply system, as well as the development of the required detention pond volume. My activities consisted of the development of construction plans, profiles, and information about the lot to be subdivided, information on the parameters required by the city of Los Fresnos.

Garden Oaks Subdivision, Los Fresnos, Texas.
Assist Professional Engineer in designing the pavement levels, the sanitary system, the pluvial system and the water supply system, as well as the development of the required detention pond volume. My activities consisted of the development of construction plans, profiles, and information about the lot to be subdivided, information on the parameters required by the city of Brownsville, quantities of work and the estimate of the final cost of the work.

Elm Drainage, Mission, Texas.
Assist Professional Engineer in identifying the existing pluvial structure and its hydraulic analysis located on Stewart Rd within the jurisdiction of Mission Texas, the pluvial infrastructure proposal was developed. Helped in the compilation of topographic survey information with the identification of manholes, conflicts with the existing sanitary system, guidelines established by the city of Mission, TX.

City of Edinburg Past Projects:

Alberta Road Expansion Phase I & II: Services provided for this project included a Topography survey, with survey exhibits including Right-of-Way map.

- Victor Trevino, P.E., R.P.L.S., was the Survey Manager overseeing the project and finalized deliverable survey exhibits.
- Daniel Garcia, Survey Technician, directed the field survey crew on data required to complete the survey and processed the field data with Microstation CAD software.
- Daniel Marquez, Survey Crew Chief, supervised the field crew and performed the boundary survey.
- Arturo Reyna, Survey Crew Chief, supervised the field crew and assisted with survey.

McIntyre Street/Missouri Pacific Railroad Pedestrian Crossing: Services provided for this project included setting Horizontal/Vertical Control, Design Survey locating all improvements (structures, utilities, flow lines), and provided survey files for engineering design.

- Victor Trevino, P.E., R.P.L.S., was the Survey Manager overseeing the project and finalized deliverable survey exhibits.
- Daniel Garcia, Survey Technician, directed the field survey crew on data required to complete the survey and processed the field data with Microstation CAD software.
- Daniel Marquez, Survey Crew Chief, supervised the field crew and collected survey data.
- Arturo Reyna, Survey Crew Chief, supervised the field crew and assisted with survey.

Hidalgo County Courthouse: Services provided for this project included survey at courthouse square and along SH 107 going West for drainage improvements.

- Victor Trevino, P.E., R.P.L.S, was the Survey Manager overseeing the project and signed and sealed the final deliverable survey exhibits.
- Daniel Garcia, Survey Technician, directed the field survey crew on data required to complete the survey and processed the field data with Microstation CAD software.
- Daniel Marquez, Survey Crew Chief, supervised the field crew and collected survey data.
- Arturo Reyna, Survey Crew Chief, supervised the field crew and assisted with survey.

Re: **Request for Qualifications – "Professional Services Pools - Surveying" RFQ No.: #2024-7**

To Whom it May Concern:

We are delighted with the opportunity to present our firm's statement of qualifications and proposal to provide our services to City of Edinburg.

S2 Engineering, PLLC is a civil engineering consulting firm established in 2021 based out of the Lower Rio Grande Valley in Mission, Texas. S2 Engineering's President/Senior Project Manager, Jose Noe Saldivar, P.E., C.F.M., has more than 24 years of progressive experience in transportation and drainage planning design. Mr. Saldivar is familiar with the regional characteristics of the Rio Grande Valley and the existing drainage infrastructure.

Our firm provides services for the design and construction of the following areas: hydraulic modeling and design, roadway infrastructure, site planning and land development, stormwater drainage design, land surveying and construction management. S2 Engineering has assembled a team of qualified personnel with the necessary knowledge and experience in the areas listed above. Our firm is positioned to meet the needs of any project from inception to completion. Our current workload permits us to confidently provide projects that meet specific requirements while being cost effective and maintaining quality.
Enclosed is information about our team's qualifications and past completed projects that shows our commitment to our clients, projects, and communities served.

Should there be any questions, contact Mr. Saldivar, President, by phone at (956) 403-9787 or email at s2engineering.ns@gmail.com. Thank you for the opportunity to participate in the Request for Qualifications.

Sincerely,
Jose Noe Saldivar, PE, CFM, President

PROFILE OF

ENGINEERING & LAND SURVEYING SERVICES

S 2 ENGINEERING, PLLC
CIVIL ENGINEERING & LAND SURVEYING
TBPE F-22858 TBLS 10194796

Providing civil engineering & land surveying services as it relates to a wide variety of project developments.

S2 Engineering, PLLC, has an office located at 2424 Mimosa, Mission, Texas 78574. We are licensed by the Texas Board of Professional Engineers and Land Surveyors Firm No. 22858 TBLS 101194796. S2 Engineering provides civil engineering services as it relates to a wide variety of project developments. Our firm can provide complete services from the initial data acquisition to preparation of plans, specifications, and estimates (PS&E). We have maintained excellent professional relationships with the Hidalgo County Drainage District No. 1, Hidalgo County Precinct 1, Precinct 2, Precinct 3 and Precinct 4.

Specific civil engineering services provided by S2 Engineering consist of:

- Hydrologic & Hydraulic Modeling & Design
- HEC-HMS
- HEC-RAS
- Site Planning & Land Development
- Stormwater Drainage Design
- Roadway Hydraulic Design
- Utility Engineering
- Route Studies & Schematic Design
- Street, Roadway & Highway Design
- Traffic Control Planning
- Construction Management
- Preparation of Plans, Specifications, and Estimates (PS&E)
- Mechanical Engineering

BELOW IS A LIST OF REPRESENTATIVE PROJECTS OUR TEAM HAS BEEN INVOLVED IN:

Drainage Projects

Weslaco Drain Improvements, Weslaco, TX (2021)
Proposed USIBWC permanent pump and gate structure, with a reinforced concrete box outfalling to the Main Floodway. The improvements benefit an area of approximately 4,014 acres. This project required close coordination with the USIBWC and six other local and federal government entities, to obtain clearance for a new structure license.

Anaquitas USIBWC Drain Structure, Mercedes, TX (2021)
Proposed USIBWC gate structure, with two reinforced concrete boxes outfalling to the Main Floodway. The improvements benefit an area of approximately 3,840 acres. This project required close coordination with the USIBWC and six other local and federal government entities, to obtain clearance for a new structure license.

K-07-02 Drain Improvements, Pharr/San Juan, TX (2021)
Ditch design, consisting of ditch widening and regrading. The existing ditch width was increased to 125 LF, providing additional capacity for stormwater.

Tierra Dorada Drain Improvements, Hidalgo, County, TX (2021)
Design and sizing of three new culvert road crossings. Two of the culvert crossings are under Shuerbach Rd and Moorefield Rd. The last crossing connects the Tierra Dorada Drain to the Perezville Drain.

J-08 Drain – McColl Rd. Culvert Crossing, Edinburg, TX (2021)
Design and sizing of a culvert crossing under McColl Road (FM 2061), calculating the appropriate tailwater elevation. This project required coordination with TxDOT for the design and traffic control plan.

Ditch 47 & Ditch 350 Improvements, Hidalgo County, TX (2020)
Design and sizing of three culvert road crossings and one culvert irrigation canal crossing. The three culvert crossings are under Mile 6 1/2, Mile 10 N., and Mile 9 N.

Chaparral Drain Extension, Donna, TX (2019)
Ditch design, consisting of ditch widening and regrading Design and sizing of a new culvert.

North San Juan Drainage Lateral, San Juan, TX (2003)
Survey work and hydraulic study for ditch design. Proposed drainage structures and upsizing the irrigation owned drainage ditch from FM 495, north to its outfall near Canton Road.

TxDOT Projects

US 277 / Maverick County, TxDOT-Laredo District (2006)
Storm drain design, analyzing appropriate tail water elevations for culvert drainage areas. System outfalls into Canyon Grande Creek. Preparation of all Hydraulic Sheets.

US 83/359, Webb County, TX (2005)
Storm drain design, analyzing appropriate tail water elevations for culvert drainage areas. System outfalls into Chacon Creek. Preparation of all Hydraulic Sheets.

SH 345, Cameron County, TX (2004)
Storm drain design, analyzing appropriate tail water elevations for culvert drainage areas. System outfalls into a Resaca. Irrigation crossing design. Preparation of all Hydraulic Sheets.

US 83 Arroyo Roma Creek, TX (2004)
Storm drain design, analyzing appropriate tail water elevations for culvert drainage areas. System outfalls into San Casimiro Creek. Preparation of all Hydraulic Sheets.

North I Road, Pharr, TX (2002)
Storm drain design, analyzing appropriate tail water elevations for culvert drainage areas. Illumination, signing and pavement marking design. Preparation of all Hydraulic Sheets.

PROJECTS COMPLETED WITH

CONFIDENCE

HYDRAULIC AND HYDROLOGIC EVALUATION FOR THE DEVELOPMENT OF DRAINAGE REPORTS (2001 – 2002). SUBDIVISIONS INCLUDE:

- Taurus Estate No. 12, 13, 15 and 16 Subdivision, private developer, Alton Texas.
- Alma Delia Subdivision, Huisache Acres No.3 Subdivision, Private Developer, Alamo Texas
- Taurus Estates No. 3,5,6,7,8,9 Subdivision, Church Estates Subdivision, Colinas del Rio Subdivision, Empire Subdivision, Private Developer, Mission Texas.
- Rancho Blanco Estate Subdivision, Private developer, Harlingen Texas.
- Seventh Day Subdivision, Arboledas Subdivision, Private developer, McAllen Texas.
- Taurus Estate No. 11,14,18 Subdivision, Western Village Subdivision, Western Estate Subdivision, Texas Village Subdivision, Private Developer, Hidalgo County Texas.

PROGRESSIVE ENGINEERING

WITH EXPERIENCE

S2 Engineering, PLLC,

has a team of qualified personnel providing a combination of backgrounds in design engineering, land surveying and construction. Our President and Senior Project Manager, Mr. Saldivar, is a licensed professional engineer who has more than 24 years of progressive engineering experience in the Lower Rio Grande Valley. He has provided engineering design services for Cities, Counties, Federal entities, and private clients. Our firm's current workload enables Mr. Saldivar to be involved in all project development, from inception through final construction.

MEET

THE S2 TEAM

JOSE NOE SALDIVAR, P.E., C.F.M.

Title
President/Senior Project Manager

Years of Experience
24

Education
BS, Civil Engineering
Instituto Tecnologico de Cd. Victoria, 1997

Training/Certifications
Professional Engineer: Texas/94076

Certified Floodplain Manager
(CFM)/3340-17N

TxDOT Pre-Certifications:
3.4.1 Minor Bridge Layouts
4.2.1 Major Roadway Design
8.1.1 Signing, Pavement Marking & Channelization
10.1.1 Hydrologic Studies
10.2.1 Basic Hydraulic Design

Areas of Expertise
• PS&E • Hydraulic Design • Hydrologic Studies • FEMA Requirements, Coordination & Funding • Minor Bridge Design • Major Roadway Design

Mr. Saldivar will be responsible for the overall project administration and management including thorough coordination with the client's essential decision makers to ensure the client's needs are met. As Senior Project Manager, he is also responsible for the in-house project coordination. The success of any project depends on proper design and engineering. S2 Engineering's in-house design and capabilities are focused on cost-efficient engineering techniques related to the constructability of projects. These designs are supported by in-house surveying capabilities. Additionally, in-house drafting services utilize the latest versions of AutoCAD to provide detailed exhibits and drawings as necessary to support bidding and construction. Drafting revisions over the course of a project are maintained through a document control process.

TEAM MEMBERS QUALIFICATIONS AND EXPERIENCE

S2 Engineering's goal is to establish long-term relationships with our clients by performing a highly competent service with quality and concern for the client, as well as our local communities. This is successfully done by the technical abilities, project management skills and commitment of the project team members. The resumes of key professional and technical staff are presented individually on the following pages.

Summary

Mr. Saldivar has more than 24 years of progressive experience in transportation and drainage planning and design. He has served as a Project Manager and Surveying Manager for various engineering firms and 14 years with the Hidalgo County Drainage District No. 1. He is experienced in route studies and planning, preparations of plans, specifications and estimates (PS&E), utility relocation, geometrics, signage and pavement markings and hydraulics. He has participated on numerous engineering assignments associated with the development of roadways, storm drainage systems, traffic control planning, bridge layout, and various other civil engineering applications. His experience includes design and development and hydraulic report/data sheet development.
He is proficient in software such as WinStorm, HEC-RAS, TR 55, HY8, Geopak and AutoCAD. Mr. Saldivar has prepared numerous drainage studies and reports including determining proposed improvement impacts, drainage areas, discharges, FEMA floodway requirements, culvert/ bridge locations and sizes, design frequency flow, tailwater and headwater elevations for design and anticipated overtopping of the bridges. He has performed scour analysis and prepared numerous SW3Ps to minimize sediment transport into drainage facilities.

Project Experience

2018 Drainage Bond Program, Hidalgo County, TX
Role: Project Manager

Mr. Saldivar was responsible for managing seventeen (17) consultants with countywide projects that would positively affect more than 69,000 structures in Hidalgo County, helping to protect more than $5.5 billion in assessed property value. The 2018 Drainage Bond Program consists of 37 projects of which ten (10) projects required coordination with USIBWC to secure environmental clearance for amended or new licenses for structures outfalling into the USIBWC Floodway. Mr. Saldivar was responsible for reviewing and approving all H&H deliverables.

Drainage Projects

Role: Project Engineer

- Anaquitas Drain
- Chaparral Drain Extension
- Chaparral Drain Extension
- Delta Regional Water Mgmt.
- Ditch 47 & Ditch 350
- J-08 Drain
- K-07-02 Drain Improvements
- North San Juan Drainage Lateral
- Tierra Dorada Drain Improvements
- Weslaco Drain Improvements

TxDOT Projects
Role: Project Engineer

- **US 277 / Maverick County**
- **US 83 / 359**
- **SH 345**
- **US 83 Arroyo Roma Creek**

OSCAR HERNANDEZ , R.P.L.S.

Title
Registered Professional Land Surveyor (RPLS)

Years of Experience
43

Education
Harlingen High School

Areas of Expertise
Surveying
Topographic Surveys Global Positioning System (GPS)
Boundary
Road / Highways
ALTA Surveys Subdivisions / Land Development
Civil Engineering Design Survey
AutoCADD
Carlson Software
Leica GEO Office Terrestrial LiDAR

Summary

Mr. Hernandez has 43 years of surveying in South Texas from San Antonio south to Brownville and from Corpus Christi west to Laredo to good use. Mr. Hernandez's areas of experience and certifications are listed below:

Experience:

SAMES, INC

JUNE 2021 – OCTOBER 2022

- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals
- Meet with design engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direct and assist survey staff with research, field work, and completion of survey documents (maps, plats, legal descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develop a high-performing team
- Handle communication in and out of the survey department to maintain client relations and staff productivity.
- Oversee quality assurance and control of survey documents.
- Prepare and submit budgets for survey department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the resumes and conduct interviews.

COBBFENDLEY

August 2019 – June 2021

- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals
- Meet with design engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direct and assist survey staff with research, field work, and completion of survey documents (maps, plats, legal descriptions, etc.)

- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develop a high- performing team
- Handle communication in and out of the survey department to maintain client relations and staff productivity.
- Oversee quality assurance and control of survey documents.
- Prepare and submit budgets for survey department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the resumes and conduct interviews.

BAIN MEDINA BAIN

November 2018 – August 2019

- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals
- Meet with design engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direct and assist survey staff with research, fieldwork, and completion of survey documents (maps,plats, legal descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develo a high-performing team
- Handle communication in and out of the survey department to maintain client relations and staff productivity.
- Oversee quality assurance and control of survey documents.
- Prepare and submit budgets for survey department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the resumes and conduct interviews.

SURVEY MANAGER/GUZMAN AND MUÑOZ

September 2018 – November 2018

- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals
- Meet with Design Engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direc and assist survey staff with research, field work and completion of survey documents (Maps,Plats, Legal Descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develop a high-performing team
- Handle communication in and out of the Survey Department to maintain Client relations and Staff productivity.
- Oversee quality assurance and control of Survey documents.
- Prepare and submit budgets for Survey Department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the Resumes and conduct interviews.

SURVEY MANAGER/GONZALEZ DE LA GARZA

July 2013 – March 2018

- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals

- Meet with design engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direct and assist survey staff with research, field work, and completion of survey documents (maps, plats, legal descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develop a high-performing team
- Handle communication in and out of the survey department to maintain client relations and staff productivity.
- Oversee quality assurance and control of survey documents.
- Prepare and submit budgets for survey department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the resumes and conduct interviews.

PARTNER/REO ENGINEERING AND SURVEYING
April 2000 – August 2002
- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Meet with Design Engineers to determine pertinent survey information required for proposed projects.
- Direct and assist survey staff with research, field work, and completion of survey documents (Maps, Plats, Legal Descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Handle communication in and out of the Survey Department to maintain Client relations and Staff productivity.
- Oversee quality assurance and control of Survey documents.
- Prepare and submit budgets for Survey Department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques.
-Evaluate new hires by Resumes and conducts interviews.

SURVEY MANAGER/CARTER AND BURGESS
BROWNSVILLE
SEPTEMBER 1997 – APRIL 2000
- Responsible for mid to long range planning, prioritization, and coordination of survey business within the survey department.
- Multi-task and work on multiple projects simultaneously
- Good managerial and communication skills
- Creating relationships with clients and managing projects to meet schedule and budget goals
- Meet with design engineers to determine pertinent survey information required for proposed projects.
- Prepare survey scopes and cost estimates
- Direct and assist survey staff with research, field work, and completion of survey documents (maps, plats, legal descriptions, etc.)
- Provide survey expertise to special surveying problems.
- Working with field crews and technicians to develop a high-performing team
- Handle communication in and out of the survey department to maintain client relations and staff productivity.
- Oversee quality assurance and control of survey documents.
- Prepare and submit budgets for survey department
- Monitor new technology, evaluate, and authorize purchase of new equipment and supplies.
- Evaluate and verify employee's performance through the review of completed work assignments and work techniques.
- Train office and field staff on surveying techniques to ensure growth opportunities.
- Evaluate new hires by the resumes and conduct interviews

TxDOT Pre-Certifications:
Sequence No. 6344 Pre-certified in
- 15.1.1 Survey
-1 5.1.2 Parcel Plats
- 15.1.3 Legal Descriptions
- 15.1.4 Right of Way Maps
- 15.2.1 Design and Construction Survey

TxDOT Districts:
- Pharr District – US 281 from FM 506 to FM 509 (Design Survey)
- Laredo District – US 83 – from San Ygnacio, Texas to the Zapata/Webb County line (Design Survey)
- Beaumont District – FM 3180 from IH-10 to m 565 (Design

Survey), IH-10 3⁄4 mile on each side of FM 3180 (Design Survey)
- Yoakum District – FM 80and FM 121 Rural (Design Survey) for culvert extensions
- Waco District – SH 190 6.7 miles (Design Survey) for widening inter lanes and ramp reversals
- San Antonio District – Intersection of SH 16 and Loop 1604 (Design Survey)

SAN ANTONIO WATER SYSTEM

Central Basin – Locating Sanitary Sewer Manholes with GPS and measuring depths, Design Survey for 30 % Design

Vista Ridge – Creating Metes and Bounds for Easements for construction of distribution water line

East Sewer Shed – Creating Metes and Bounds for Construction Easement along existing Sanitary Sewer line

CITY OF SAN ANTONIO

Alley Rehabilitation Design Survey throughout the City Boundary and Improvement Survey on;
Huantes Property on Guadalupe Street,
Las Palmas Property on Commerce Street,
St Marys Property on Culebra Street
Sidewalk Construction Project (Design Survey) on;
Martin Luther King Drive Indiana Street
Aransas Avenue
Porter Street
Delmar Street
New Braunsfels Avenue

Drainage Projects

Role: Design Technician
- -HWY 107 Drainage Improvements
- -Mercedes Lateral Widening
- -Mile 3 Outfall to Bell RDF
- -Trenton Drain Phase III

Precinct 4 Projects

Role: Design Technician
- -Hidalgo Surplus County – San Carlos
- -Maintenance Shop Civil Plans
- -Owassa Rd and Roosevelt Rd Connection

Surveys
- -Agua Dental, Brownsville, TX
- -Calli Village Townhomes, Brownsville, TX
- -Sunshine Village Apartments, Harlingen, TX
- -Whataburger, Port Isabel, TX

RMA

Evans Road from TCP Parkway to Hanging Oak Design Survey

Blanco Road from Wilderness Oak to 3.7 miles North (Design Survey)

Bexar County

Pearsall Road (Design Survey) elevating road and Bridge

RESTITUTO A. ASCANO III, R.P.L.S.

Title
R.P.L.S.

Years of Experience
15 years

Areas of Expertise
- Design of survey plats.
- Survey analization.

Education

Mapua Institute of Technology

Bachelor of Science: Civil Engineering

Manila, Philippines

TEAM MEMBERS QUALIFICATIONS AND EXPERIENCE

Summary

Dedicated and focused Project Management Specialist with over 15 years of experience excelling at prioritizing, completing multiple tasks simultaneously and following through to achieve project goals. Flexible, detail-oriented and adaptive team player with expertise in equipment operation, staff training and development, customer service and process improvements.

Skills

- •Technical Presentations
- •Project Development
- •Work Planning and Prioritization
- •Work Flow Planning
- •Team Leadership
- •Project Management

Experience

August 2023 - Present
S2 ENGINEERING PLLC / RPLS **Mission TX**

-Analyze survey points
-Reseatch chain of title
-Check existing easements
-Prepare and revise survey plats
-Write and revise metes and bounds

Jan 2012 - Dec 2014
J A Garza Associates / Project Manager **McAllen, TX**

-Project Manager
-Analyze Survey Points
-Research Chain of Title
-Check existing Easements if any
-Prepare Survey Plat
-Write Metes and Bounds

Mar 2010 - Dec 2011

LMS Resources / ERC GIS Tech **McAllen, TX**

-Convert previous AutoCAD files to ARC GIS
-Built Gas Pipeline Database of Various Clients using all existing maps, data and
surveys.
-Conversion of different drawing files to ARC GIS building database for Client's use.

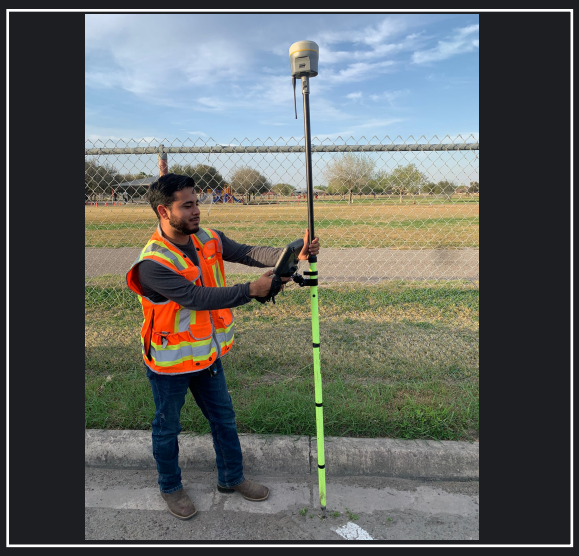
LUIS ROBERTO MARTÍNEZ IBARRA

Title
Graduate Engineer

Years of Experience
2 years

Education
The University of Texas Rio Grande Valley, Edinburg, TX Bachelor of Science in Civil Engineering – GPA: 3.42 Colegio Mexicano Reynosa, Reynosa, TAMPS, MX High School Diploma - GPA 4.0

Areas of Expertise
• Design of subdivision plats.
• Drainage and utility layout design for subdivisions.
• Design and draft drainage improvement projects for the Hidalgo County Drainage District No. 1
• Traffic control plans design.
• Drainage reports for subdivisions.



Summary
Mr. Martinez has 2 years of experience. Mr. Martinez's areas of experience are listed below:

Project Experience
• Conducting professional project presentations for different cities in the Hidalgo County.
• Coordinating and meeting with cities and/or utility companies for subdivision processes.

Academic/Personal Projects
Senior Design – Edinburg Arts and Cultural Center; Edinburg, TX August 2021 – May 2022
• As the Project Manager of a team of 5, we created and designed a proposed city capital improvement project for the school board.
• Conducted and organized over 10 meetings with Engineers and Professors to properly address technical calculations and designs.
• Completed a formal set of plans, request for qualifications, site assessment, environmental/geotechnical studies, drainage assessment/report, 3D Rendering, cost estimates, standard details and project schedules.

Organizations
ASCE – American Society of Civil Engineers
Member January 2019 – Present
• Member of the international Concrete Canoe Competition contributing with the canoe design and concrete mix.

Skills
Public speaking, teamwork, adaptability, problem solving, leadership, listening. Language proficiency: Spanish, English, French (Basic). Software proficiency: AutoCAD, Civil 3D, MicroStation, Microsoft Office. 55+ WPM.

MICHAEL ALEXANDER PALOMO

Title
Survey Party Chief

Years of Experience
4 years

Areas of Expertise

- Survey field work
- Topographic collector
- Heavy Equipment Operator
- Data Collector Software

Summary
Mr. Palomo has 4 years of experience. Mr. Palomo's areas of experience are listed below:

Experience

• Hidalgo County Drainage District, Engineering Department - Survey crew member. Conducting topographic information for engineering projects:

• S2 Engineering PLLC - Survey Party Chief. In charge of the survey management of the engineering company. Getting field data essential for engineering design.

Projects

• Hidalgo County Drainage District

-Mission Lateral Drain Bond Project, Hidalgo County
-North Main Drain Widening Project, Hidalgo County
-South Lateral Drain Bond Project, Hidalgo County

• S2 Engineering PLLC

-Sunshine Estates No. 2 Subdivision, Hidalgo County
-TARS No. 1 Subdivision Hidalgo County
-T&O Ranch No. 4 and No. 5 Subdivisions Hidalgo County
-Los Amigos Phase 3 Subdivision
-Collecting field information and managing surveying data for property survey projects.

Skills

Trimble R12i, Trimble R8, Trimble R10, Conventional Level, Trimble Total Station Management, Digital Level, Project Management, Team Management.

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☒ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

5. a. Does the Company have an office located in Edinburg, Texas?

4.

Yes____ No_x__

b. If the answer to the previous question is "yes", how long has the Company conducted business from its Edinburg office?

_____ (years) _____ (months)

c. State the number of full-time employees at the Edinburg office. _____

6. Has the Company or any of its principals been debarred or suspended from contracting with any public entity?
Yes____ No_x__

If yes, identify the public entity and the name and current phone number of a representative of the public entity familiar with the debarment or suspension, and state the reason for or circumstances surrounding the debarment or suspension, including but not limited to the period of time for such debarment or suspension. _____

7. Indicate person whom The CITY may contact concerning your submittal.

Name: Jose N. Saldivar, P.E.
Address: 2020 E Griffin Pkwy, Mission, Texas 78574
Telephone: 956-403-9787
Fax: _____
Email: s2engineering.ns@gmail.com

8. Surety Information

Have you or the Company ever had a bond or surety instrument "called," canceled, or forfeited?
Yes ( ) No (x).
If yes, state the name of the bonding company, date, amount of bond and reason for such bond being "called," or its cancellation or forfeiture._____
_____
_____

9. Bankruptcy Information

Have you or the Company ever been declared bankrupt or filed for protection from creditors under state or federal proceedings? Yes ( ) No (x)
If yes, state the date, court, jurisdiction, cause number, amount of liabilities and amount of assets. _____
_____
_____
_____

10. Provide any other names under which your business has operated within the last 10 years.
N/A
_____
_____

LITIGATION DISCLOSURE FORM

Failure to fully and truthfully disclose the information required by this Litigation Disclosure form may result in the disqualification of your submittal from consideration or termination of the contract, once awarded.

1. Have you or any member of your Firm or Team to be assigned to this engagement ever been indicted or convicted of a felony or misdemeanor greater than a Class C in the last five (5) years?

   Circle One YES (NO)

   1 Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

   Circle One YES (NO)

3. Have you or any member of your Firm or Team to be assigned to this engagement ever been involved in any claim or litigation with the CITY or any other Federal, State or Local Government, or Private Entity during the last ten (10) years?

   Circle One YES (NO)

If you have answered "Yes" to any of the above questions, please indicate the name(s) of the person(s), the nature, and the status and/or outcome of the information, indictment, conviction, termination, claim or litigation, as applicable. Any such information should be provided on a separate page, attached to this form and submitted with your submittal.

HOUSE BILL 89 VERIFICATION

I, Jose N. Saldivar, the undersigned representative of S2 Engineering PLLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2270:**

1. Does not boycott Israel currently; and

2. Will not boycott Israel during the term of the contract.

3) Is not currently listed on the State of Texas Comptroller's Companies that Boycott Israel List located at https://comptroller.texas.gov/purchasing/publications/divestment.php

Pursuant to Section 2270.001, Texas Government Code:

1. "Boycott Israel" means refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations specifically with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes; and

2. "Company" means a for-profit sole proprietorship, organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or any limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company or affiliate of those entities or business associations that exist to make a profit.

SENATE BILL 19 VERIFICATION

I, Jose N. Saldivar, the undersigned representative of S2 Engineering PLLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY
Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

S2 Engineering PLLC

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

CONFLICT OF INTEREST QUESTIONNAIRE
For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

Local Government Code § 176.001(1-a): "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

Local Government Code § 176.003(a)(2)(A) and (B):

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

Local Government Code § 176.006(a) and (a-1)

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

Re: **Request for Qualifications for Land Surveying Services 2024-7**

Greetings Mr. Hinojosa,

SAMES, Inc. (SAMES) is pleased to present our statement of qualifications for land surveying services to the City of Edinburg (City). We are extremely interested in facilitating the City's projects through completion of precise and timely land surveying deliverables.

Please find included in this response our surveying qualifications and experience, project team composition, relevant land surveying projects and local government project references. SAMES provides comprehensive surveying services in support of civil engineering, land development and construction projects, however our survey department is fully staffed and operates autonomously from our other production divisions. Our surveying project portfolio spans over 16 years of successful land surveying and includes work performed for private, commercial, local, state and federal government clients. Due to our definitive experience in professional land surveying, we are confident and committed in our ability to perform this work in a professional, timely and cost-effective manner.

I, Samuel D. Maldonado, will be the primary point of contact for all correspondence and communications pertaining to this RFQ. My contact information is as follows:

Samuel D. Maldonado, PE, RPLS – Principal / C.E.O.
200 S. 10th Street, Suite 1500, McAllen, TX 78501
O: (956) 702-8880 F: (956) 702-8883 M: (956) 207-7030
sam@samengineering-surveying.com

To date we have not received any addendums to this RFQ. As one of the two firm principals, I have the authority to submit this Statement of Qualifications and contractually bind the firm. Please contact me should you have any questions or wish to discuss our land surveying qualifications in further detail. Thank you for your time and consideration of our firm's qualifications.

Respectfully,

Samuel D. Maldonado, P.E., R.P.L.S.
Principal – SAMES, INC.

FIRM INTRODUCTION

SAMES is extremely interested in providing the **City of Edinburg** with the highest quality in **Professional Land Surveying Services** tailored to the needs of the City. SAMES is fully committed and prepared to offer the City of Edinburg with top-tier service in land surveying and any other professional services that may be required under this solicitation. Our professionals will combine their knowledge and experience to deliver comprehensive, cost effective and quality-driven Professional Land Surveying services.

SAMES is a minority owned firm established in 2008 by Samuel and Saul Maldonado, two brothers with a vision to develop a legacy of leadership succession serving communities world-wide. Over our **16 years in business**, we have always maintained our Corporate Mission "To empower leadership that promotes excellence through **teamwork**, **accountability** and **integrity** while providing quality professional engineering, construction and surveying services." SAMES proudly serves local, municipal, state, federal and private/commercial clients from our corporate headquarters in downtown **McAllen, Texas where services will be provided for this solicitation**.

SAMES is registered and in good standing with the Texas Board of Professional Engineers and Land Surveyors. We are a certified Disadvantaged Business Enterprise (DBE), a State of Texas Historically Underutilized Business (HUB) and a Small Disadvantage HUBZone firm certified by the U.S. Small Business Administration.

SAMES is interested and committed in providing the City of Edinburg with Professional Surveying Services for all local, state, and federally funded projects. We offer a well-rounded, capable, and experienced team of professionals readily available to serve. Our survey team has successfully completed survey projects for agencies such as: **Texas Department of Transportation (TxDOT), Hidalgo County Regional Mobility Authority, Hidalgo County Drainage District No. 1, Department of Energy (DOE), Department of Defense (US Navy, US Army), US Fish and Wildlife Services** as well as many other local government entities.

SAMES' Surveying Department is led by the firm's CEO and Registered Professional Land Surveyor (RPLS), Samuel D. Maldonado. Samuel Maldonado has 16 years of experience in Professional Land Surveying.

LAND SURVEYING SERVICES

Our land development and planning services consist of subdivision platting, feasibility studies, and land surveying services which include **aerial mapping & photogrammetry, topographic & boundary surveys, utility and right-of-way mapping, construction staking, as-built and ALTA surveys**. SAMES surveying division utilizes the latest and most advanced software and technologies in surveying equipment and drafting programs in order to successfully deliver our projects with a high degree of accuracy and within schedule. Additionally, SAMES is pre-certified with the Texas Department of Transportation (TxDOT) for the following Surveying Disciplines and has the resources, experience, and ability to deliver a quality turn-key surveying project on time and within budget.

- 15.1.1 Right of Way Surveys
- 15.2.1 Design Survey
- 15.2.2 Construction Survey
- 15.3.5 Horizontal and Vertical Control
- 15.3.6 Airborne LiDAR
- 18.2.1 Subsurface Utility Engineering

Our surveying services include, but are not limited to, the following:

- **Legal Easement Boundary Surveys**
  - Ingress and Egress Routes
  - Legal Descriptions for recording purposes
  - Plat Maps
  - Reconciliation of discrepancies between survey and recorded legal description
- **Property Surveys**
  - Legal Description for recording purposes
  - Subdivision Plats
  - Land, Easement, and Right-of-Way Acquisition
- ALTA Surveys
- Construction Surveying and Staking
- **Location of Underground Utilities**
  - Storm & Sanitary Sewer, Gas
  - Gas, Electrical, Telephone
- **Topographical Surveys**
  - Establishment of survey benchmarks
  - Survey alignments for roadways and/or utilities
  - Establishment of rights-of-way, easements, and baselines
  - Legal description for recording purposes
- Elevation Certificates for National Flood Insurance Program (FEMA)
- Horizontal and Vertical Control
- Metes and Bounds Descriptions

Throughout the past 16 years, SAMES has developed key business relationships with private/commercial clients as well as agencies in all levels of government: local, state and federal. As a direct result of our firm's experience and qualifications, the responsiveness of our survey staff, and the quality of our work, SAMES has completed the following notable survey projects to date.

- **City of Edinburg** – Topographic Surveying for Luna Subdivision Drainage Project; Right-of-Way mapping for Schunior Road and Davis Road; Parcel Plat Services for Union Pacific Railroad Company; Topographic Surveying for Intersection of Mark Pena Dr. and Closner Blvd; Parcel Plats and Title Reports for Schunior Road Detention Pond Project; Municipal Park Splash Pad Topographic Surveying; Dr. Diaz Park Splash Pad Topographic Surveying; Topographic Surveying for Apollo Park, Memorial Park, Fountain Park, and Municipal Park.
- **City of San Juan** – Boundary Survey with Improvements for Old Firehouse and Old City Hall.
- **City of Brownsville** – Topographic and Boundary Surveying for TxDOT Bridge Expansion (Owens Road Parcel Acquisition); Utility Elevation Survey for Brownsville Cannery Market.
- **City of Harlingen** – Topographic Survey for Arroyo Colorado Trail Extension Phase I.
- **City of Weslaco EDC** – Surveying Services for Force Main Easement and ALTA Survey for Mid-Valley International Industrial Park.
- **City of McAllen** – Topographic Surveying services for McAllen ISD No. 6 Lot 1, Morris Park; Topographic Surveying for N. 6th Street & W. Hackberry Avenue Signal Improvements; Surveying Services for 2021 Metro Sidewalk Improvements; Surveying Services for Waterline Alignment at Bicentennial & Kendlewood Ave.; Tract Map w/ Metes & Bounds for Abandonment of Ally (16th & Beech Ave.); Surveying services for 2nd Street and La Vista Avenue.
- **City of Rio Grande City** – Survey Plat with Metes & Bounds for Drainage Easement #1 and #2 for Rio Grande City Public Safety Development; Boundary Survey with Improvements for Youthplex Subdivision Lot 3 and Eisenhower Road; Surveying Services for Reynaldo Pena Commercial Subdivision.
- **Edinburg CISD** – Surveying services for Norma Linda Trevino Elementary; Surveying Services for Brewster Elementary.
- **Pharr Housing Authority** – ALTA Survey for Sunset Terrace Senior Village and Parkview Terrace.
- **Hidalgo County** – Surveying Services for Bio Safety Testing Laboratory
- **Hidalgo County Drainage District No. 1** – Surveying Services along Waterways for 2018 Bond Referendum Projects #12 and #13; Surveying Services for B-18-26 Mission Lateral (16 Parcels).
- **Hidalgo County Regional Mobility Authority (HCRMA)** - Topographic Surveying and right-of-way map for FM 493 in Donna, Texas, which included approximately 105 parcel plats; Topographic Surveying of U.S. 281 SUE; Boundary Survey of SH 365 Toll Road SUE; Surveying Services for HCRMA X-Parcels.
- **City of Harlingen** – Field Surveying Services for Arroyo Colorado Trail Extension Phase I.
- **Hidalgo County Regional Mobility Authority** - Topographic Surveying and right-of-way map for FM 493 in Donna, Texas, which included approximately 105 parcel plats; Topographic Surveying of U.S. 281 S.U.E.; and Boundary Survey of SH 365 Toll Road S.U.E.
- **Port of Brownsville** - Boundary Survey of 7.5 miles along State Highway 48; Boundary Surveys for one 700-acre tract and one 500+ acre tract for Big River Steel.

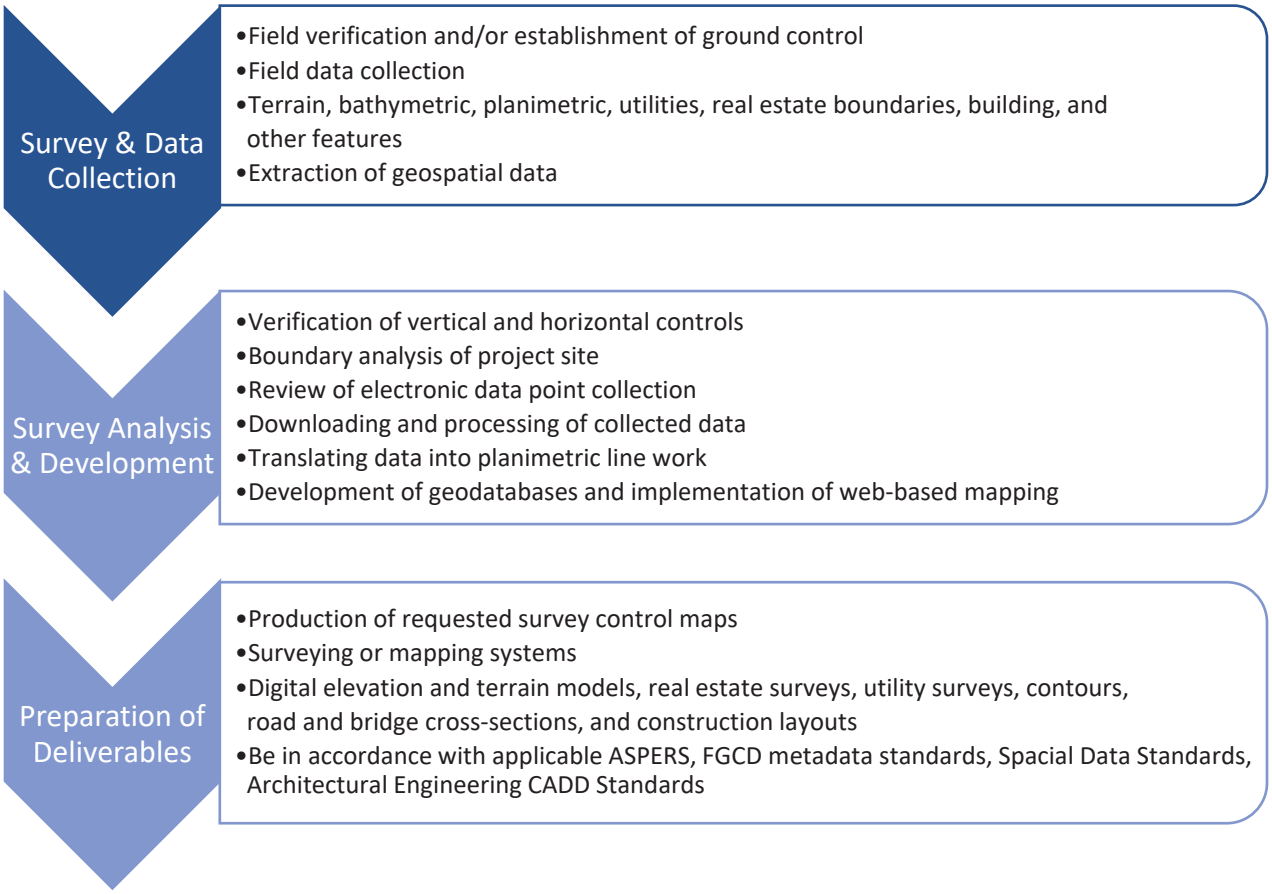
The projects noted below depict SAMES' surveying experience is substantiated by multiple ongoing contracts with various federal and local entities across South Texas.

- **Texas Gas Service** – On-Call Surveying services
- **Affordable Homes of South Texas, Inc.** – Property / Land Surveying Services
- **Hidalgo County Drainage District No. 1** –Surveying Services
- **Hidalgo County** – Surveying Services
- **City of McAllen** – On-Call Surveying Services
- **City of Edinburg** – Surveying & Topographical Services for Residential and Commercial Properties
- **Texas A&M University System** – Pool for Real Estate Survey Services

FAMILIARITY LOCAL GOVERNMENT AND COMMERICIAL SURVEYING

The strategic mission of SAMES' surveying division is to efficiently provide comprehensive and accurate surveying and mapping services. Throughout years SAMES professionals have acquired the skills and obtained the requisite knowledge of important elements required for the successful and timely completion of any survey project. We have developed key business relationships with government agencies such as the **Hidalgo County, Hidalgo County Regional Mobility Authority, Port of Brownsville**, **Texas Department of Transportation**, and various municipalities and utility districts. Our commercial clients include **Texas Gas Service, AT&T, American Electric Power, Spectrum Communications**, and various **mortgage companies**, **title companies**, **real estate agents** and **land developers**.

PROJECT APPROACH



SAMES' extensive surveying expertise contributes to providing a developed systematic approach to ensure that the proper planning and surveying criteria are identified and implemented. The SAMES team has the suitable knowledge of important elements required for any surveying project including the necessary thorough understanding of the following items:

- **Property/Boundary Surveys**
- **Topographical Surveys**
- **Benchmark Establishment**
- **Right-of-Way Mapping**
- **Easement Acquisition**
- **Preparation of Legal Descriptions**

A main component of the SAMES' company philosophy consists of becoming intimately involved in our projects to ensure the client's best interests are held to the highest priority.

SAMES approaches every project with a team philosophy and the full commitment of our professional staff to ensure the complete satisfaction of our clients. Work on a typical survey begins immediately upon receipt of a signed work / task order. Our scheduling process begins with understanding the project to help us better realize our client's vision. Our team breaks down and identifies specific project tasks and organizes them into a comprehensive schedule of work activities that encompasses the entire project. This work management plan helps us effectively address client requests, identify specific scopes of work, establish project parameters and aid in identifying any possible issues from the onset, thereby streamlining overall project production.

Surveying, mapping, and related services are provided in three (3) distinct phases: (1) **Survey & Data Collection**, (2) **Survey Analysis & Development**, and (3) **Preparation of Deliverables**.

QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

SAMES will provide each project deliverable after a thorough QA/QC evaluation. SAMES recognizes that Quality Assurance begins with a full understanding of what the City expects to be delivered. We consistently meet with our clients to ensure we fully comprehend the project and its requirements. We utilize and follow the *Texas Board of Land Surveying Act and Rules* and the *Texas Society of Professional Surveyors Manual of Practice for Land Surveying in the State of Texas*. We maintain and continuously update our in-house and field QA/QC procedures that include periodic employee training in QA/QC methods, field equipment testing, and both pre-process and post-process checks of collected data.

Survey task leaders understand the importance of the control/checks measures that are performed in the field during the collection of data and are made aware of the limits that are required for each project they are assigned to. Due to these established QA/QC field procedures task leaders know immediately if a limit has not been met and data needs to be recollected for verification or correction. If field personnel cannot resolve the problem onsite, they contact the office and obtain support and direction from the survey manager. Task leaders are also familiar with their equipment's setup and are trained to make appropriate checks to identify any point of possible equipment failure before leaving the office and commencing with their survey.

Office procedures include team members performing a comprehensive verification of every word and number on every document in a survey, and redundant map checks of both parcel plats and legal descriptions. Team members will validate data between the CADD drawing, the parcel description, the parcel plat, the printed right-of-way sheets, the map checks, and the recorded documents for either deeds or plats. Project managers and task leaders review each submittal prior to delivery. Post-project we review our QA/QC procedures for opportunities to improve.

SCOPE PRACTICES

SAMES commits to attaining any City of Edinburg deadlines and comply with the City's specifications and expectations regarding surveying services. SAMES services will include performing all surveys, measurements, computations, drawings, descriptions, and plat maps as required by the City of Edinburg and the contract performance work statement. All work will be performed in accordance with local, state, and federal regulations and policies. SAMES will provide the City with prompt, quality-controlled surveying services to meet their project needs. Professional Surveying Services will be coordinated through the professional staff of SAMES as the designated project managers. Primary communication with the City will be through the Senior Project Manager and Registered Professional Land Surveyor, Samuel D. Maldonado.

STAFFING

SAMES has a total of **85 employees** which includes licensed professional staff, state registered/certified technicians and highly trained support and administrative/management personnel that actively participate in our projects. SAMES professional staff includes:

- **Six (6)** State of Texas Licensed Engineers
- **Two (2)** State of Texas Registered professional Land Surveyors
- **One (1)** Project Management Professional
- **Two (2)** Certified Floodplain Managers
- **Five (5)** Engineers-in-Training
- **Two (2)** Surveyors-in-Training
- **Six (6)** Field / Graduate Engineers

SAMES management system will allow for adequate flexibility to compensate for unanticipated workloads within the firm - thereby providing a balanced staffing plan that will never jeopardize the responsiveness and quality of services provided to our client. Moreover, our staffing plan will allow the firm to manage multiple concurrent projects without compromising the quality and the attention to detail that encompasses our commitment to our clients.

RESUMES

SAMES' principal-in-charge, Samuel Maldonado, will be the Primary Point of Contact for the City of Edinburg. Mr. Maldonado will work closely with the City of Edinburg to ensure project milestones are met on schedule. The following are brief resumes of our key personnel, highlighting relevant professional experience. The resumes are followed by an Organizational chart of the team.

Samuel D. Maldonado, PE, RPLS – Senior Project Manager & Primary Point of Contact is a Licensed Professional Engineer, a Registered Professional Land Surveyor, and Construction Manager with over 25 years of experience. Mr. Maldonado has over 16 years of surveying experience and is highly proficient in horizontal and vertical control, utility location surveys, route surveying, aerial surveying and mapping, design surveying, land and easement acquisition and subdivision platting. He has extensive experience working with TxDOT, local municipalities and counties, utility companies as well as private investors and land developers. Mr. Maldonado spearheads all our surveying projects and throughout the years has developed relationships with entities such as AT&T, American Electric Power (AEP) and Time Warner Cable Communications (TWC) for general condition while continuously providing surveying and engineering services.

Project Experience:

HCDD #1 2018 Bond Referendum Project No. 13 – Hidalgo Drain – McAllen, Texas

- Provided project management and surveying services for this bond project involving the widening of an existing ditch to increase linear detention and positive flow to the outfall at the IBWC Floodway
- Design included the upgrade of existing culvert structures, cleaning, and regrading while surveying services included topographical surveying and parcel mapping.

- Oversaw the planning, development, surveying, geotechnical services, and hydraulics and hydrology design services prior to preparation of the plans, specifications, and cost estimates for construction.

New Hidalgo County Courthouse – Edinburg, Texas

- Prepared easement parcel plats by conduction thorough investigation of the properties and obtaining title reports of all property owners fronting the roadway.
- Provided project benchmarks, established construction staking of building corners, building piers, water and sewer lines, storm drain lines and other utility improvements.
- Surveying services were provided in multiple phases to allow for minimum disturbance to ongoing construction work.

Hidalgo County Regional Mobility Authority (HCRMA) Surveying Services – Hidalgo County, TX

- Provided boundary surveying services for multiple parcel plats located throughout the County, including abstracting and plotting, setting of control monuments and establishment of benchmarks, prepared parcel plats with metes and bounds description.
- Topographic survey and right-of-way map for FM 493 in Donna, Texas which included appx. 105 parcel plats with metes and bounds description.

Arroyo Colorado Trail Extension Phase I – Harlingen, Texas

- Provided field surveying services for construction of a 10-foot multipurpose trail beginning under the I-69 West Overpass then continuing west to Dixieland Park.
- Surveying services included collecting elevations at 50-ft. intervals at a 50-ft. width along the proposed trail alignment, plus 3 crossings identified to include water top and flowline.
- Provided an original Plan View sealed plat and AutoCAD DWG file of a detailed topographic survey of the area and of a decent size gorge to determine overall depth of the trail.

Leo L. Rodriguez, PE, RPLS - Project Survey Support is a Registered Professional Land Surveyor and Licensed Professional Engineer in the State of Texas. He brings over 40 years of experience associated with providing civil engineering design and surveying services to private, commercial and government projects. He has performed work for projects throughout the Rio Grande Valley as well as in San Antonio. His experience is comprehensive and encompasses design and construction of water, sewer, roadway, and drainage systems along with their associated surveying requirements.

As Project Surveyor Mr. Rodriguez's key responsibilities are:

- Provide guidance to field and office personnel for the completion of boundary surveys and improvement surveys.
- Provide training and knowledge to field and office personnel regarding surveying professional standards and industry standard practices.
- Review surveys for completeness and accuracy.

Project Experience:

- Cimarron County Club – Design of a 500-acre residential subdivision and resort surrounded by an 18-hole championship golf course.
- Southwest Drainage Improvements for the City of McAllen resulting in eight (8) different construction projects.
- Nolana Loop roadway and drainage design from 2nd Street to Bicentennial.

- Dove Avenue roadway and drainage design from 2nd Street to 10th Street.
- Water distribution system for McAllen Public Utility Board from Expressway South to Neuhaus Drive.
- Water distribution system along Jackson Road from FM 495 to Owassa Road.
- Sanitary sewer line collection system for the City of Alton with an estimated construction cost of $8,000,000.
- Tierra Santa Golf Course engineering design for the roadway, utilities and storm drainage systems in Weslaco, Texas.

Altogether, Samuel D. Maldonado and Leo L Rodriguez offer over 50 years of professional land surveying experience.

Jessica M. Maldonado, PE, PMP, CFM, SIT - Contract Administrator is a Licensed Professional Engineer, Certified Floodplain Manager, Project Management Professional and Surveyor in Training with over 15 years of experience in management of surveying and design projects. As the Vice President of the Professional Services Department, she oversees the survey and CADD departments, assists with the coordination and scheduling of survey crews, and provides quality assurance for every deliverable while offering valuable survey management support.

Project Experience:

Hidalgo County Pct. 1 TxGLO Flood and Drainage Improvements – Hidalgo County, Texas
- Provided contract administration services and oversaw the design and construction of a new storm drain network, consisting of over 4,000 LF of 36-inch and 48-inch steel polymer coated storm pipe and a 1,250 linear foot long by 130-foot-wide ditch excavation.
- Obtained all required permits, prepared, and submitted all funding reports and provided quality assurance during construction.
- Coordinated with the General Land Office to ensure compliance with program funding requirements.

Hidalgo County FEMA Roadway Reconstruction Project – Hidalgo County, Texas
- Oversaw the design and construction of road and drainage improvements to various streets within Hidalgo County Precinct No. 1.
- Provided contract administration services and coordinated with the County to ensure FEMA funding compliance.

Ware Road Utility Relocation Project (TxDOT CSJ: 2094-01-038 Roadway Expansion)–McAllen, Texas
- Oversaw the design and provided project management of the PS&E utility relocation package which included the waterline and sanitary sewer line improvements.
- Assisted McAllen Public Utility (MPU) with compensable utility support documentation required for the Advance Funding Agreement and Standard Utility Agreement.
- Provided project estimates and review submittals for TxDOT and MPU to review and approve.
- Oversaw the preparation of construction approved plans and specifications in accordance with TxDOT standards and MPU requirements.
- Performed TxDOT utility coordination to avoid conflicts during construction and provided responses to all contractor requests for information.

- Prepared final as-built drawings and submitted to MPU and TxDOT.

Hidalgo County Pct. 2 BCAP Rnd III Road and Drainage Improvements – Hidalgo County, Texas
- Provided design and contract administration for road and drainage improvements to two (2) subdivisions.
- Project was funded by TxDOT's Border Colonia Access Program Third Call of Proposition Three funding and so improvements were developed in accordance with TxDOT design standards, guidelines, and regulations.

Ezequiel Garcia, SIT - Survey Manager is a certified Surveyor-in-Training with extensive experience in the land development, surveying, civil engineering design and construction management field. Mr. Garcia studied Drafting and Design at Texas State Technical College then graduated from the University of Phoenix with a Bachelor of Science Degree in psychology with coursework focused on business administration. His classes in business administration together with his direct work experience have provided him with foundational principles and key leadership skills which he utilizes during each project he works on. Mr. Garcia is proficient in organizational leadership, project management and client relations. His additional responsibilities include management and coordination of survey work and crews, preparation of surveying cost estimates and proposals, and review of project plans and drawings for the purpose of providing quality assurance.

Project Experience:

Adolph Thomae Jr. County Park Shoreline Protection Project Phase III & IV
- Prepared Survey Control Plan for establishing and maintaining horizontal and vertical control.
- Prepared Pre-Construction Survey
- Prepared Post-Construction Survey
- Coordinated with client and field crews to stake out a proposed alignment for a gravity wall.
- Collected proposed materials for the wall as it was installed to create as-builts cross sections.
- Provided quality assurance and quality control procedures for project.

Schematic of Right-of-Way Acquisition Strip Map of Davis Road, Edinburg
- Oversaw the schematic for Right-of-way acquisition project of approximately 1.75 miles.
- Services included referencing Hidalgo County City Maps and Appraisal District property information to create Right-of-Way Exhibit Map

Schematic of Right-of-Way Acquisition Strip Map of Schunior Road, Edinburg
- Oversaw the schematic for Right-of-way acquisition project of approximately 2.73 miles.
- Services included referencing Hidalgo County City Maps and Appraisal District property information to create Right-of-Way Exhibit Map

Hidalgo County Urban County Program -2019 HOME Rehabilitation Funds
- Coordinated with client, field crews, and survey cad techs to provide survey services for 26 home improvement sites.
- Submitted bi-weekly progress reports including photos and status to the client.
- Provided quality assurance and quality control procedures for project.

Hidalgo County Drainage District- FM & Country Road-Bond Referendum Project No.12

- Oversaw project and create parcels maps with metes & bound for right-of-way acquisition for 17 parcels.
- Coordinated with client, field crews, and survey cad techs to provide the required R.O.W acquisition.

City of McAllen Medical Center Topographic Survey
- Oversaw project to create a digital cad file of all existing improvements for a Utility Emergency Power Upgrade Project
- Provided utility coordination with Hospital staff and Electrical Company as well as utilized GPRS to provide CADD file and final topographic survey.

Bryan Pena - Project Manager is the assistant Director of Geospatial Services with over 8 years of combined field experience as a Survey Party Chief and Project Management. Mr. Pena's field experience provided him with first-hand knowledge of different types of survey equipment used, measurements taken, and the type of information required in the preparation of a proper survey. He is proficient in the reading of legal documents and the preparation of survey maps and related documents. Mr. Pena currently works in the Survey Department as a Project Manager. He performs research, coordinates with the clients, field crews and office staff, and provides quality assurance quality control procedures to minimize error and ensure a smooth streamlined process in the completion of a survey.

Project Experience:

Hidalgo County Regional Mobility Authority
- Prepared Survey Control Plan for establishing and maintaining horizontal and vertical control.
- Coordinated with client and field crews to stake out a proposed alignment for future ROW.
- Collected proposed materials for the wall as it was installed to create as-builts cross sections.
- Established and maintained quality assurance and quality control procedures for project.

Right-of-Way Acquisition Strip Map for Ware RD McAllen
- Oversaw the schematic for Right-of-way acquisition project of approximately 5.25 miles.
- Services included referencing Hidalgo County City Maps and Appraisal District property information to create Right-of-Way Exhibit Map.

Space X - Primary POC for all Construction Staking and General Surveying
- Maintain Project controls on all heavy civil projects.
- Project Management and Purchase order management.
- Manage Time and Materials contracts within SpaceX.

White Construction - New SpaceX Office Building
- Assisted in the design build metrology process for anchor rods and footings.
- Oversaw project to create a digital cad file of all existing improvements for all Utility Upgrades
- Oversaw Ground operations.

Hidalgo County Pct. 3 Extension of Shary Road 2 Miles North of SH 107
- Developed topographic map of existing ground features including all structures and current ROW.

- Established construction benchmarks (vertical and horizontal control) IAW TxDOT specifications.
- Performed research and delineation of current ROW and developed ROW strip map.
- Coordinated and confirmed all existing utilities and easements within the project limits.

Texas Border Infrastructure for Del Rio Sector, Maverick County - Eagle Pass TX.

- Oversaw the design build surveying required for 5 miles of Linear attributes.
- Maintained project documentation and invoicing.
- Aided Texas Facilities Commission and Prime contractor on various Boundary surveys for the US Mexican Border alignment.

Eduardo Huerta - Lead Project Surveyor is a graduate engineer with five (5) years of experience in planning, surveying and drafting of civil improvement projects. The largest project he was recently involved in was the RGV Border Wall in Hidalgo County. Mr. Huerta managed the project, coordinated the office and field survey work, and performed some of the field surveying required. Mr. Huerta has also completed field surveys, traffic control plans, gas line relocations (including bore relocations), and various types of designs required by Texas Gas Service. Mr. Huerta has managed design and construction for land and site development projects specifically focusing on platting, paving, drainage, water and sanitary improvements.

Project Experience:

2021/2022 Kiewit dba Southwest Valley Constructors RGV Border Wall Construction – Hidalgo County, Texas

- Provided project management and weekly reports in accordance with contract requirements.
- Underwent specialized training required by Kiewit to perform surveying on federal contracts.
- Coordinated weekly safety trainings and meetings.
- Prepared and submitted detailed invoices of work performed.

2021/2022 E.C.I.S.D. Norma Linda Trevino Elementary School- EDINBURG, Texas

- Prepared a boundary drawing with existing ad joiners, easements, and right of way.
- Prepared a topographic drawing of all existing conditions in the subject area.
- Served as Project Lead in the field and primary point of contact for coordination of all utilities.

2021/2023 Hidalgo County Drainage District No. 1 – Parcel Acquisition – Hidalgo, Texas

- Prepared a boundary design drawing of the existing properties.
- Prepared parcels plats with metes and bounds description of the parcels.
- Point of contact for all utilities relocations.

Texas Gas Service – Gas Line Relocation – Hidalgo, Texas

- Provided a base map showing where the gas line is located.
- Prepared any easement acquisition required for the subject property.
- Coordinated with surveyors to provide existing conditions of the area.
- Prepared a plan and profile plans and exhibit of the existing gas line.

San Juan New City Hall – San Juan, TX

- Prepared Bid documents, assisted with bid procurement and attended pre-construction meeting to kick off project.
- Attended weekly progress meetings with Contractor and Architect
- Prepared construction plans for the development of a 1-acre gross property platted into 1 commercial lot.
- Verified Submittals, Requests for Information, Pay Applications from Contractor for final recommendation.
- Performed weekly site visits to observe and inspect construction activities.
- Coordinated the final walkthrough and prepared the final punch list.
- Prepared close out documents and as-builts drawings for submittal to the City of San Juan

Rusbel Pena – Assistant Project Surveyor is an Assistant Project Engineer with experience in civil engineering design, project management and professional land surveying. As an Assistant Project Engineer (APE) Mr. Peña works closely with the Project Manager to research, develop and design roadway, drainage, water, and sewer line projects for municipalities throughout the Rio Grande Valley. He assists in the completion of utility layouts, drainage layouts, and drainage reports. Additionally, he coordinates with the project owner, aids in the development of construction plans and specifications, and assists with the bid procurement and construction administration of a project. Mr. Peña's surveying experience includes topographic surveys completed for government clients as well as American Land and Title Association (ALTA) surveys completed for commercial clients. Regardless of the type of project Mr. Peña is working on, his priority remains the same - to provide complete customer satisfaction while ensuring compliance with contract requirements and adherence with local, state, and federal codes and regulations. .

Project Experience:

ECISD Brewster Elementary Schoole - Edinburg, TX

- Provided a boundary base map with existing adjoiners, easements, and the current right of way.
- Imported and deciphered the raw data from the surveying crew.
- Coordinated with surveyors to provide existing conditions of the area.
- Provided a survey plat detailing all existing features of the school.

2020 Donna Street Improvement-Donna, TX

- Provided boundary base map with existing adjoiners, easements, and the current right of way.
- Imported and deciphered the raw data from the surveying crew, created the existing surface.
- Provided a full set of Construction Plans showing existing conditions and the proposed improvements for Miller Avenue, South 26th Street, South Avenue, and Lissner Avenue.
- Assisted in the preparation of Bid Documents (Purchase of Materials only).

2021/2022 San Juan Street Improvements – San Juan, TX

- Provided boundary base map with existing adjoiners, easements, and the current right of way.
- Imported and deciphered the raw data from the surveying crew and created the existing surface.
- Provided guidance in the preparation and completion of the construction plans.

- Provided a full set of Construction Plans showing existing conditions and the proposed improvements for Alfredo Street, Jaime Street, Standard Avenue, Loma Linda Street, Loma Verde Street, Loma Vista Street, and W. 12th Street.
- Assisted in the preparation of Bid Documents.
- Performed weekly site visits to observe and inspect on-going construction activities.
- Created weekly field reports detailing the on-going construction activities and provided directions to other inspectors performing field observations visits.
- Coordinated the Final Walk Through with the City of San Juan, Urban County, and the Contractor to determine project conformance and compliance with contract specifications.
- Provided a full set of AS-BUILTS Construction Plans with all proposed improvements.

City of Roma Street Improvements Project – Roma, TX

- Provided guidance in the preparation of a boundary base map with existing adjoiners, easements, and the current right of way.
- Oversaw the importing and deciphering of raw data from the surveying crew, and the creation of an existing surface.
- Designed the new reconstruction of two existing roads.
- Assisted in the preparation of Bid Documents.
- Provided a full set of AS-BUILTS Construction Plans with all proposed improvements.

SPACE X – SH4 Chamber Adjustment Design - Cameron County, TX

- Provided a topographic map of approximately 3,800 LF of the existing roadway.
- Created the existing surface of the road.
- Coordinated with utilities that could have affected the road.

Rio Grande City Public Safety Subdivision – Rio Grande City, TX

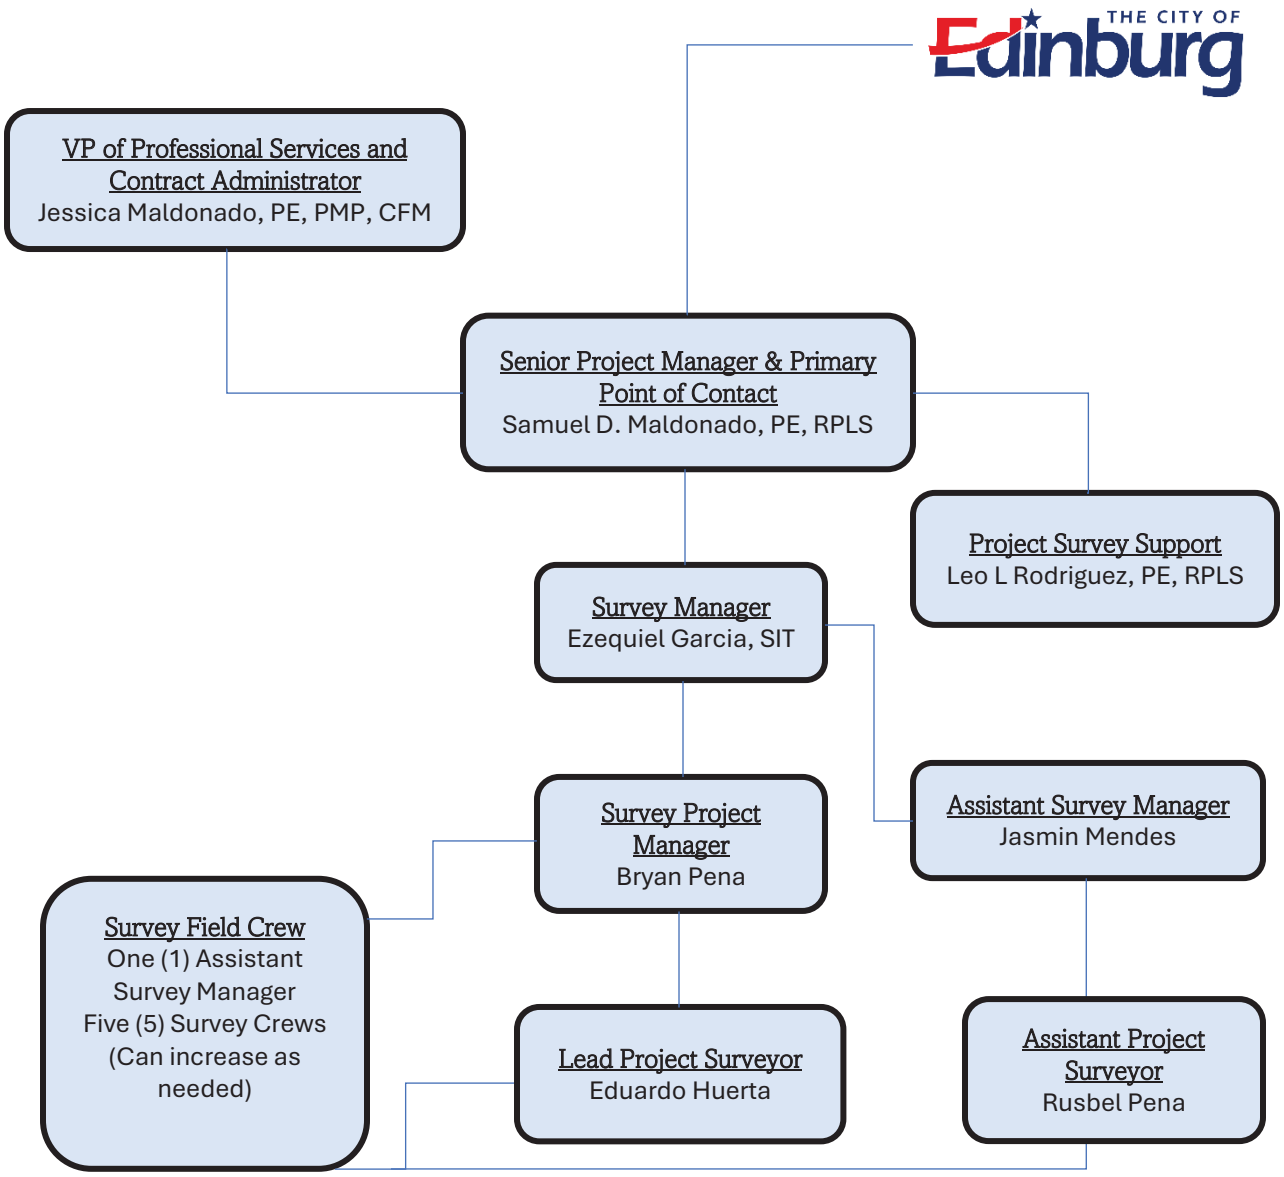
- Oversaw the completion of the base map and topographic data.
- Completed a drainage report for the specific use of the property.
- Assisted in the preparation of a subdivision plat and ensured compliance with all requirements for the subdivision process.

City Hall and Fire Station – San Juan, TX

- Provided a boundary base map with existing adjoiners, easements, and the current right of way.
- Imported and deciphered the raw data from the surveying crew and created the existing surface.
- Coordinated with surveyors to provide existing conditions of the area.
- Coordinated with utilities to show what utilities are in the area.

USDA Moore Air Base, Main Entrance Turning Lane – Edinburg, TX

- Provided a topographic map of the existing roadway.
- Coordinated with utilities and showed on survey plat.
- Imported and deciphered the raw data from the surveying crew and created the existing surface.
- Provided a survey plat detailing all existing features of Turning Lane.



ALTA Survey for A.J. McColl Subdivision – Pharr, TX

- Provided a boundary base map with existing adjoiners, easements, and the current right of way.
- Coordinated with utilities and showed on survey plat.
- Followed all the table A Items required to complete survey.

Subdivision Replat of Asian Valley – McAllen, TX

- Assisted in the preparation of the Subdivision Plat and Utility Layout for the Replat of Asian Valley.
- Coordinated with the City of McAllen and obtained necessary notes and signatures for the Subdivision Plat.
- Performed all required research and assisted in retrieval of the tax certificates for the property.
- Assisted in addressing all comments from the City of McAllen utilizing AutoCAD Civil 3D.
- Assisted in the completion of the subdivision plat and in getting it recorded in the City of McAllen.

ORGANIZATIONAL CHART

SURVEYOR EXPERIENCE – KEY PROJECTS

The following projects denote **SAMES' key** representative experience with respect to scope of service areas identified in the RFQ for Land Surveying Services. Client point of contact information is provided for reference.

- **Schematic Right-of-Way Acquisition Strip Map of David Road (I69C to East City Limits)**

  Contract Date: **03/30/2022-10/31/2022**

  Client: **City of Edinburg**
  Roberto D. Hernandez, EIT
  415 W. University Drive
  Edinburg, TX 78539
  (956) 388-8211

SAMES was contracted by the City of Edinburg to provide professional surveying services in support of a major drainage improvements project. The scope of work called for a schematic Right-of-Way acquisition strip map of Schunior Road, a 2.73-mile length of road, and Davis Road, a 1.75-mile length of road. SAMES's survey department conducted research and data collection using Hidalgo County City maps and Appraisal District property information to create the Right-of-Way exhibit maps. Aerial surveying was conducted to capture and include any structures while field work established minor control for the project. At completion the maps included the existing right-of-way, proposed right-of-way, proposed number of parcels, and any visible structures.

- **Professional Surveying Services for the RAD/Blend Repositioning Project**

  Contract Date: **03/20/2023-07/31/2023**

  Client: **Pharr Housing Authority**
  Noel De Leon, Executive Director (noel.deleon@pharrha.org)
  104 W. Polk Avenue
  Pharr, Texas 78577
  (956) 783-1316

SAMES was contracted by the Pharr Housing Authority (PHA) to provide professional surveying services for a total of 86 properties including single family residences, duplexes, multi-family dwelling units, office and maintenance buildings. PHA needed professional surveying services for a select list of properties prior to receiving a Commitment to Enter into a Housing Assistance Payments Contract with HUD. SAMES provided conventional topographic surveying, boundary surveying with or without improvements, or an ALTA/NSPS Land Title Survey for each property listed in the contract agreement. Standard survey scope of work included accurate flood zone identification, longitude and latitude coordinates for property corners in decimal degrees, clearly marked/flagged property corners and photo of surveyed property taken from the closest public road right-of-way. A total of four (4) properties required an ALTA/NSPS Land Title Survey, 3 were multi-family dwelling units and 1 was an empty lot to be used for future construction. The ALTA/NSPS Land Title Surveys required selection of specific Table A items that needed to be included in the surveys. SAMES coordinated with PHA to provide the following Table A items: monuments placed at all major corners of the boundary of the surveyed property, flood zone classification, gross land area, vertical relief with source of information (contour, interval, datum, with originating benchmark), current zoning classification, setback requirements, height and floor space area restrictions, parking requirements specific to the surveyed property, exterior dimensions of all buildings at ground level, substantial features observed in the process of conducting the fieldwork, number and type of striping and parking spaces on surface parking areas and lots, names of adjoining owners, distance to the nearest intersecting street, and proposed changes in street right of way lines. SAMES followed the 2021 Minimum Standard Detail

Requirements for ALTA/NSPS Land Title Surveys in completion of the ALTA surveys. All surveys were signed and sealed by a Texas Registered Professional Land Surveyor.

Parkview Village

Palm and Civic Center

- **Topographical Surveying and GPRS Services for UHS Cornerstone Regional Medical Center Expansion**

  Contract Date: **05/03/2023-05/31/2023**
  Client: **Gresham Smith & Partners**
  Michael D. Hunkler, Project Manager
  222 Second Avenue South, Suite 1400
  Nashville, TN 37201
  (615) 770-8156

SAMES was contracted by Universal Health Services to provide professional topographic surveying services and ground penetrating radar system (GPRS) services needed to locate private utilities. Cornerstone Regional Medical Center sits on a 4.45-acre tract of land located at 2302 Cornerstone Blvd in Edinburg, Texas. The scope of work included locating any existing visible utilities and substantial structures such as trees, sidewalks, ADA ramps, curbs, parking spaces, roadways and buildings. A digital map of the topography at 1-foot contour intervals was provided in both CAD and PDF file formats. SAMES provided critical spot elevations, established 2 benchmarks for the surveyed areas and provided SUE services to locate private utilities using GPRS. UHS requested use of NAD83 (ADJ2011) Horizontal Datum and NAVD 88 Geoid 12B Vertical Datum coordinate systems. All survey deliverables were signed and sealed by a Texas Registered Professional Land Surveyor.

- **Construction Surveying Services for Texas General Land Office Adolph Thomae Jr. County Park Shoreline Protection Project Ph. III and IV, Arroyo City, TX**

  Contract Date: **04/07/2022-07/31/2022**
  Client: **Shirley & Sons Construction**
  Ronald Shirley
  15705 FM 787
  Cleveland, TX 77327
  (713) 222-7811

SAMES was subcontracted by Shirley & Sons Construction to provide construction surveying services for this Arroyo City project. Scope of work included preparation of a survey control plan, qualifications of surveyors, pre-construction surveys, progress surveys, and post-construction surveys in a survey field

notebook format. SAMES also provided cross sections and a digital map of the topographic survey reflecting those cross sections.

All submittal and stakeout points were based on established benchmarks, control points and proposed elevations as shown on the construction drawings provided by the client.

- **HCDD #1 2018 Bond Referendum Project #12**

  Contract Date: **03/2019-exp. 2021**

  Client: **Hidalgo County Drainage District No. 1**
  Raul E. Sesin, PE, CFM – General Manager
  902 N. Doolittle Road, Edinburg, Texas 78542
  (956) 292-7080

This project consists of a detailed study to design a new storm drainage system for the neighborhoods located between South River Road and surrounding the Chaparral Drain in Donna, Texas. At completion, storm runoff will outfall to the existing Hidalgo County Drainage District #1 facilities, thus eliminating the flooding in these neighborhoods. SAMES is providing Engineering and Surveying services. The Surveying services included are: (1) collection of pre- and post-development field data within project boundaries; (2) parcel mapping; (3) preparation of plans and specifications; (4) location of existing utilities; (5) identification of property corners, limits of ROW, easements, tract corners, and section corners.

- **HCDD #1 2018 Bond Referendum Project #13**

  Contract Date: **03/2019-exp. 2021**

  Client: **Hidalgo County Drainage District No. 1**
  Raul E. Sesin, PE, CFM – General Manager
  902 N. Doolittle Road, Edinburg, Texas 78542
  (956) 292-7080

This project consisted of upgrading the existing culvert structure, cleaning, regrading, and widening of the existing ditch to increase linear detention and positive flow to the outfall at the IBWC Floodway. SAMES is providing Engineering and Surveying services. The Surveying services included are: (1) collection of pre- and post-development field data within project boundaries; (2) parcel mapping; (3) preparation of plans and specifications; (4) location of existing utilities; (5) identification of property corners, limits of ROW, easements, tract corners, and section corners.

- **Hidalgo County Testing – Bio Safety Lab**

  Contract Date: **07/2020-exp. 2021**

  Client: **Hidalgo County**
  Martha L. Salazar, Hidalgo County Purchase Agent
  2812 S. Business Hwy 281, Edinburg, TX 78539
  (856) 318-2626

This project consists of providing overall Civil Engineering and Surveying Services for the proposed Bio Safety Lab on behalf of the County of Hidalgo. The Surveying services included are: (1) signed and sealed Topographic Surveys with planimetric and topographic information; (2) collection of pre- and post-development field data within project boundaries; (3) utility coordination; (4) establishment of horizontal and vertical control of project.

❖ **SpaceX – Professional Engineering & Surveying Services**

Contract Date: 09/2021-12/2021
Client: Space Exploration Technologies Corp.
Ryan Santos, SpaceX Buyer
51900 Joanna Street, Brownsville, TX 78521
(310) 363-6424

This project consisted of providing Professional Engineering and Topographic Surveying Services to a 3,600 LF SH4 roadway which consisted of a five-point roadway cross-section at 50 ft. intervals. Design services included the adjustment of four curves along SH4 to meet the TXDOT design super-elevation criteria at highway speed of 40MPH. The Surveying services included are: (1) signed and sealed Topographic Surveys with planimetric and topographic information; (2) collection of pre- and post-development field data within project boundaries; (3) utility coordination; (4) establishment of horizontal and vertical control of project.

❖ **City of McAllen – #4 Gardenia at North 12th St**

Contract Date: 01/2020-07/2020
Client: City of McAllen
Yvette Barrera, PE, City Engineer
1300 Houston Ave., McAllen TX, 78501
(956) 681-3111

This project consisted of drainage improvements to upgrade an existing drainage system along Gardenia Avenue and include associated scope such as pavement repair, concrete curb and gutter, valley gutter, outfall rip rap, trench protection and traffic control. The Surveying services included are: (1) signed and sealed Topographic Surveys with planimetric and topographic information; (2) collection of pre- and post-development field data within project boundaries; (3) utility coordination; (4) establishment of horizontal and vertical control of project.

❖ **City of Brownsville On-Call Surveying Services – Parcel Survey Plats**

Contract Date: 2020-2021
Client: City of Brownsville
Jose F. Perez, Assistant Director
1001 E. Elizabeth Street, Ste. 101
Brownsville, TX 78520
(956) 548-6087

SAMES provides Professional Surveying Services on behalf of the City of Brownsville as required. The Surveying services included are: (1) signed and sealed Topographic and Boundary Surveys with planimetric and topographic information; (2) identification of existing property corners, limits of ROW, and easements.

Re: RFQ No. 2024-007 – Land Surveying Services Rotation

Dear Ms. Balderas:

Supreme Engineering, PLLC (Supreme) is pleased to submit our Statement of Qualifications to City of Edinburg for the 2024 Professional Land Surveying Services.

Supreme has been providing Professional Services since 2019; therefore, we are confident that our company diverse team is qualified to serve the needs of City of Hidalgo and our communities. We are eager to demonstrate that our experience and motivation will produce a quality product that will meet your expectations. Our Team gained firsthand experience with municipal and county projects by means of employment; therefore, our Team is very familiar with City of Edinburg needs. The Team gained over twenty-five (25) years of combined experience and worked closely to plan, design, draft, and perform quality assurance on various projects.

We are looking forward to developing a continuous professional relationship with City of Edinburg.

Should you have any questions or need additional information, please feel free to call me as the main point of contact at 956-272-2246 or email me at omar.cano@supremeengineering.com.

Sincerely,

Omar Cano, PE, CFM
President

Section 2
Firm Qualifications and Experience

FIRM QUALIFICATION AND EXPERIENCE

Supreme Engineering, PLLC (Supreme) understands that in order for City of Edinburg to proactively manage the City's needs, especially in efficient and timely manner to alleviate the City's infrastructure and to protect life and property for City of Edinburg's residents, businesses and surrounding jurisdictions, may contract with qualified engineering firms to assist with this endeavor. Road/Utility infrastructure and Drainage have had a major impact in City of Edinburg in the past years. This has impacted the city economically, and it has reached the residents Citywide. Many state and federal agencies have open new grant and loan opportunities to mitigate the latest natural disaster declarations allowing City of Edinburg the opportunity to seek assistance from these federal and state agencies to assist with major infrastructure which will results in benefits for the residents.

Land Surveying

Supreme surveyor has experience with preparation of the following surveying tasks in a timely manner as follows:

1. Boundary lines, giving length and bearing on each straight line; interior angles; radius, point of tangency, and length of curved lines. set iron pin (monument at property corners where none exists; drive pin 18" into ground, mark with wood stake; state on drawing whether corners were found or set and describe each.
2. Legal description, including measurements in recorded deeds for comparison with observed.
3. Area in square feet if less than one acre, in acres (to .001 acre) if over one acre.
4. Identify, jurisdiction and width of adjoining street and highways, width and how paved. identity of landmarks.
5. Plotted location of structures on the property and on adjacent property within 30 feet. dimension perimeters in feet and inches to nearest ½. state character and number of stories. dimension to property lines and other buildings. vacant parcels shall be noted "vacant".
6. Encroachments, including cornices, belt courses, etc., either way across property lines.
7. Fences and walls; describe. identify party walls and locate with respect to property lines.
8. Recorded or otherwise known easements and right-of-way; state owner of right.
9. Possibilities of prescriptive right-of-way and nature of each.
10. Anticipated street widening.
11. Individual lot lines and lot and block numbers. street numbers of buildings.
12. Sidewalks, curbs, gutters & drives on the block and extend to include the same across boundary streets.
13. Building line and setback requirements.

14. Names of owners of adjacent property.
15. Reconciliation or explanation of any discrepancies between survey and recorded legal description.
16. Title searches and title reports.
17. Right of Way acquisitions.

To complete the above tasks the surveyor shall have the minimum topography survey requirements:

1. All lines of levels shall be checked by separate check level lines or on previous turning points or benchmarks.
2. Traffic devices, signs, in connection with boundary streets.
3. Future plans of city, utility districts, and municipal utilities when such information is discovered in routine information gatherings.
4. Minimum of one permanent benchmark on site for each ten or less acres; description and elevation to nearest .01'.
5. Contours at 1 foot intervals; error shall not exceed one-half contour interval.
6. spot elevations at each intersection of a 20-foot square grid covering the property and if possible 5 foot grid interval (s) beyond.
7. Spot elevations at street intersections and at 5 feet on center on curb, sidewalk, and edge of paving including far side of paving. if elevations vary from established grades, state established grades, state established grades also.
8. Plotted location of structures, man-made and natural features; floor elevations at each entrance of building on property.
9. Location, size, depth and pressure of water and gas mains, and other utilities serving or on the property, valves, meters.
10. Location of fire hydrants available to property and size of main serving each.
11. Location of electric and telephone services and characteristics of service available.
12. Location, size, depth and direction of flow of sanitary sewers, storm drains and culverts serving or on property; location of catch basins and manholes and inverts of pipe at each; same at or in boundary streets.
13. Name of operating authority of each utility.
14. Mean elevation of eater in any excavation, well or nearby body; flood level of streams.
15. Extent of watershed onto property. probability of freshets overrunning the site.
16. Locations of test borings if ascertainable and elevation of top of holes.
17. Trees of 3" and over (caliper 3' above ground) locate within 1' tolerance and give species.
18. Perimeter outline only of thickly wooded areas unless otherwise directed.
19. Location, size, elevation of elevated: piping insulated piping, conduit, pipe racks and supports; except that above building roofs.

20. Show dimensions and bearings of property boundaries, and plot all locatable title exceptions and easements on the survey map.
21. Show existence or non-existence of any encroachments and Right of Way.
22. The written legal description of the property and exhibit(s) for recording purpose.
23. Provide an area measurement within boundary lines.
24. Easements – all utility, city and private easements shall be shown and labeled.
25. Legal description and exhibit(s) for any easements where required.
26. Setbacks – building and parking setbacks shall be shown and noted for each property or zoning areas.
27. All above grade utilities, including but not limited to overhead electrical, telephone, cable, street lighting, and other electrical and communications equipment; location and rim elevations of sanitary and storm sewer structures, water main valves, and hydrants; gas valves and all other above grade utility equipment.
28. All underground utilities, including but not limited to storm, sanitary, water, gas, telephone, electrical, and cable. rim elevation, bottom of manhole, and all in and out inverts of utilities shall be noted. note: if any of these utilities do not exist within or directly adjacent to the survey area, surveyor shall locate the nearest available service connection which can be used for future service to site.
29. Provide on the survey a list of names, addresses, and phone numbers of all applicable utility companies.
30. Trees, shrubs, and planting areas: all trees 2” caliper and larger shall be labeled with caliper and species. all tree canopies shall be accurately shown.
31. All trees 6” caliper and larger shall be labeled with caliper and species. all tree canopies shall be accurately shown and areas of woods or shrubs accurately delineated.
32. Zoning of the property and all adjacent properties within 100’ of the surveyed area.
33. Provide planning and zoning overlays.
34. Current flood plain information including FEMA regulatory 100-year and 500-year floodplain boundaries, notation of record flood event elevation (2008 flood), 100- year flood elevation and other DNR protected area boundaries.
35. All measurement tolerances provided on such surveys must be within readings for urban survey as specified on accuracy standards for ALTA/ACSM land title surveys.

Office Location

Supreme Engineering has its office in Edinburg Texas at 135 paseo del Prado Ste 7.

Firm's Capacity to Undertake the Project and Accomplish in the Required Time

✓ **Ability to Commence Services**
Supreme Engineering, PLLC is able to commence services immediately upon issuance of a Notice to Proceed.

✓ **Concurrent Projects**
Supreme Engineering, PLLC has a variety of government and private projects: however, we have the personnel and resources to avoid any interference with any projected awarded to Supreme Engineering.

✓ **Company Ownership**
Supreme Engineering, PLLC is a one owner company with healthy finances. Supreme is not for sale nor intend to be offer in the long future.

✓ **Litigations**
Supreme Engineering, PLLC has no past nor pending litigations.

✓ **Financials**
Supreme Engineering, PLLC is not in default in any loan or any other financial agreements with a bank or other financial institution.

✓ **Conflict of Interest**
Supreme Engineering, PLLC, owner/s, owners' family has no financial or other relationship with City employees, officers, City Council or committee members.

✓ **Insurance Claims**
Supreme Engineering, PLLC has no insurance claims in the past five years.

✓ **Affirmative Action Program**
Supreme Engineering, PLLC is committed to affording equal opportunity in employment to all individuals without regard to race, color, religion, sex or national origin.

Section 3
Team Member Qualifications and Experience

TEAM MEMBER QUALIFICATIONS AND EXPERIENCE

Supreme Engineering, PLLC (Supreme) has been providing professional surveying services to a variety of clients within the Rio Grande Valley. Supreme is registered with the Texas Board of Professional Engineers and Land Surveyors, Registration **No. 10194901**. Supreme staff has over 10 years of combined experience. Supreme is located locally in Edinburg, Texas, giving Supreme an edge when selected to provide services for projects within the City of Edinburg. Supreme is familiar with City of Edinburg's design standards and guidelines as well as County, State, and Federal regulations to assist with completing projects while complying with any applicable regulations. Supreme utilizes the latest CADD and GPS technology and equipment. Our firm is equipped with technology that will allow us to respond to our client's needs immediately.

Supreme currently employees registered professional land surveyor, engineer, surveyor & engineer designer, construction inspector, surveying technicians and sub-consult any professional service as deem necessary. Employees have a diverse background and are committed to delivering a quality product. Therefore, their diversity allows them to perform multiple duties to ensure that a project meets City of Edinburg's expectations and is delivered on time.

Omar Cano, PE, CFM

BS in Civil Engineering, Texas A&M University – Kingsville, Texas
Registration: Texas Professional Engineer 120081
Certified Floodplain Manager 2389-13N

Mr. Cano has performed work with public and private entities. His public service includes serving as Interim Director of Engineering for the City of Edinburg and he served as an Engineer for Hidalgo County Drainage District No. 1. Public service allowed Mr. Cano to coordinate with consultants, entities, and the public to resolve the infrastructure needs to the area. He is also familiar with the local municipal and state regulations required for design and construction and survey of engineering projects. Mr. Cano's experience includes designing and analyzing engineering work related to hydraulics and hydrology, preparing cost estimates and Preliminary Engineering Reports for a design that will serve the needs and budget, conducting and coordinating site visits to monitor the projects progress and contractors' performance. Mr. Cano has managed projects funded through TWDB / GLO. He will be responsible for final review of plans and will be sealing all designs. As Project Manager, Mr. Cano will be responsible for leading all tasks in the contract and overseeing all aspects of the day-to-day operations.

Mr. Cano is proficient in HEC-HMS and HEC-RAS, SEWER CAD, Windstorm, and AutoCAD/Civil 3D.

Trenton Drain Phase III – Project limits are from Southwest Trenton to North of Wisconsin to connect to the South Main Drain I in Edinburg. New ditch that serves 12 colonias to have a drainage outfall. 1.7 Miles of drainage ditch and 2 major crossings.

South Main Drain II Phase I Ditch Improvements – The project consisted of improving the existing South Main Drain II from McColl Road to I69C in Edinburg. The improvements consist of maximizing the cross sections of the ditch to take advantage of the existing ROW. This not only helps many existing subdivisions using it as an outfall but also will help other communities from western cities by reducing water surface elevation of the ditch.

City of Edinburg Jackson Rd Hike & Bike – Project limits are from Canton to Chapin, 2.8 miles, first of its class in Edinburg. The project consisted of rest areas and parking areas, designed for future connectivity to other cities.

Canton Heights Subdivision Development – Project limits are from I69C to Raul Longoria Road in Edinburg. The project consisted of improving the existing South Main Drain I to connect and accommodate the proposed new development's storm system.

Restituto (Sonny) Ascano III

BS of Science in Civil Engineering, Mapua Institute of Technology – Manila, Philippines
Registration: Texas Registered Professional Land Surveyor No. 6225

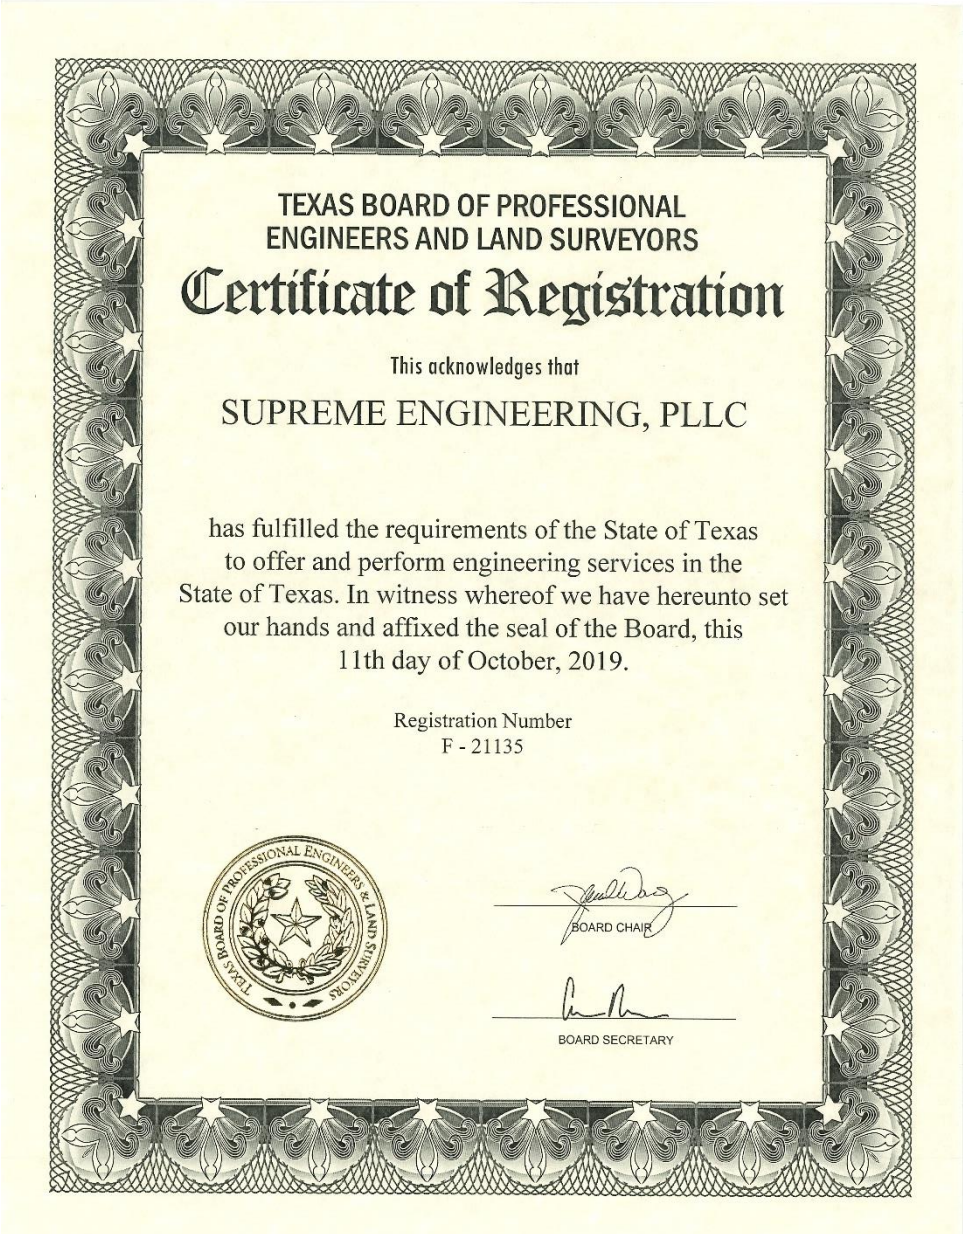
Mr. Ascano has forty-two (42) years of experience and is ready to contribute to everything from minor property surveys to major, multi-property undertakings. He is skilled in developing precise drawings from scratch based on recorded and field data. Coordinate with project engineer on final as-built drawings so department and customer had accurate record of final design implemented on site. Receive and review details from design professionals to determine precise measurements for drawing preparation.

Mr. Ascano had the opportunity to gain firsthand knowledge of the requirements set forth by the State of Texas for land surveying working on local surveying firms. He expand his knowledge in gather all researched documents, previous plats, existing maps, chain of title and existing easements pertaining to subject property in preparation for the survey crew to do their field work in accordance with the scope of work, monitor performance of project team members to provide performance feedback, write Metes and Bounds as clearly as possible and describe corners found or set on the ground, submit project deliverables to clients, consistently adhering to quality standards.

Mr. Ascano has been responsible for managing and verifying the accuracy of survey data, including measurements and calculations conducted on the ground, establish legal boundaries for sites based on legal deeds and titles, prepare or supervise the preparation of all data, plats, maps, records, calculations, and all related documents defining the survey, prepare or supervise writing descriptions for use in deeds, leases or other legal documents, conduct exhibit for ground surveys designed to establish baselines, elevations and other geodetic measurements, making sure that surveys conform with Texas Board of Professional Land Surveying Practices

Jose Luis Garcia, Jr.

Certificate in Civil Drafting – South Texas College



Mr. Garcia offers over fifteen (15) years of civil drafting experience. He is proficient in the following:

- Autodesk Land Desktop
- MicroStation V8i (Select Serie 4)
- Microsoft Office
- Geo Viewer
- AutoTurn
- Civil 3D
- Trimble GPS Equipment

He has performed boundary surveys and drafted for roadway, storm drainage, wastewater collection and water distribution design. Mr. Garcia has also drafted for commercial, public, and residential development. He has produced As-Builts, prepared presentation exhibits and has assisted with USIBWC levee gate structure plans. Mr. Garcia has also served as a survey technician and field crew member to perform boundary surveys. Currently Mr. Garcia is enrolled at Lone Star College Montgomery to assist him on becoming eligible to be a Professional Land Surveyor.

Section 8

Appendix A

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☑ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

SENATE BILL 19 VERIFICATION

I, Omar Cano, the undersigned representative of Supreme Engineering, PLLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - a) *means, with respect to the entity or association, to:*
     - i) *refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - ii) *refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - iii) *terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - b) *does not include:*
     - (i) *the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - (ii) *a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

Supreme Engineering, PLLC

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

CONFLICT OF INTEREST QUESTIONNAIRE
For vendor doing business with local governmental entity

A complete copy of Chapter 176 of the Local Government Code may be found at http://www.statutes.legis.state.tx.us/Docs/LG/htm/LG.176.htm. For easy reference, below are some of the sections cited on this form.

Local Government Code § 176.001(1-a): "Business relationship" means a connection between two or more parties based on commercial activity of one of the parties. The term does not include a connection based on:

(A) a transaction that is subject to rate or fee regulation by a federal, state, or local governmental entity or an agency of a federal, state, or local governmental entity;

(B) a transaction conducted at a price and subject to terms available to the public; or

(C) a purchase or lease of goods or services from a person that is chartered by a state or federal agency and that is subject to regular examination by, and reporting to, that agency.

Local Government Code § 176.003(a)(2)(A) and (B):

(a) A local government officer shall file a conflicts disclosure statement with respect to a vendor if:

***

(2) the vendor:

(A) has an employment or other business relationship with the local government officer or a family member of the officer that results in the officer or family member receiving taxable income, other than investment income, that exceeds $2,500 during the 12-month period preceding the date that the officer becomes aware that

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor;

(B) has given to the local government officer or a family member of the officer one or more gifts that have an aggregate value of more than $100 in the 12-month period preceding the date the officer becomes aware that:

(i) a contract between the local governmental entity and vendor has been executed; or

(ii) the local governmental entity is considering entering into a contract with the vendor.

Local Government Code § 176.006(a) and (a-1)

(a) A vendor shall file a completed conflict of interest questionnaire if the vendor has a business relationship with a local governmental entity and:

(1) has an employment or other business relationship with a local government officer of that local governmental entity, or a family member of the officer, described by Section 176.003(a)(2)(A);

(2) has given a local government officer of that local governmental entity, or a family member of the officer, one or more gifts with the aggregate value specified by Section 176.003(a)(2)(B), excluding any gift described by Section 176.003(a-1); or

(3) has a family relationship with a local government officer of that local governmental entity.

(a-1) The completed conflict of interest questionnaire must be filed with the appropriate records administrator not later than the seventh business day after the later of:

(1) the date that the vendor:

(A) begins discussions or negotiations to enter into a contract with the local governmental entity; or

(B) submits to the local governmental entity an application, response to a request for proposals or bids, correspondence, or another writing related to a potential contract with the local governmental entity; or

(2) the date the vendor becomes aware:

(A) of an employment or other business relationship with a local government officer, or a family member of the officer, described by Subsection (a);

(B) that the vendor has given one or more gifts described by Subsection (a); or

(C) of a family relationship with a local government officer.

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9.*

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

SUPREME
ENGINEERING

CITY OF EDINBURG - CITY COUNCIL
Meeting Date: August 20, 2024
AWARDING OF BIDS
Agenda Item No: 10.F.
2024-2026 Architectural Services Rotation

1. **Agenda Item:**
Consider Awarding RFQ 2024-008, Architectural Services to Qualified Firm(s) and Authorize the City Manager or Designated Appointee to Enter Into a Professional Services Contract with Such Firm(s) as Projects Arise. [Mardoqueo Hinojosa, P.E., CFM, City Engineer]

2. **Description:**
On occasion the City of Edinburg requires Architectural Services on City projects which do require an Architect. The qualified firm(s) selected should be experienced in the field of Architectural services, having experience in the planning research, site analysis and consultation, land use entitlement, city planning, architectural and engineering design, code analysis, sustainable design, contracting and sourcing, cost analysis and schedule, construction contract admin, landscaping architecture, and design services for furniture. It is expected that the qualified firm(s) selected will have a sufficient level of innovation and appraisal expertise to carry out the projects without constraints to produce documents in a timely manner. The firm must be prepared to assure the City of Edinburg that key personnel indicated in their qualification statement will maintain their role in each project and that their present workload is such that each project will be completed on or before the due date.

The rotation is for potential projects between October 2024 through September 2026. Projects to be funded in the upcoming fiscal years, as prioritized by the City Council.

On Tuesday, July 16, 2024, Request for Qualifications were received for RFQ 2024-008, Architectural Services. A total of fourteen (14) Request for Qualifications were received and opened.All the submittals received met the criteria set out in the Request for Qualifications.

The following qualified firms listed in alphabetical order have submitted Statements of Qualifications in response to this RFQ:
1. Able City
2. Alvarado Architects & Associates*
3. Boultinghouse Simpson Gates Architects
4. Brown Reynolds Watford Architects
5. CG5 Architect
6. Diverse Studio
7. ERO Architects*
8. Gignac Architects
9. Heffner Design Team
10. Milnet Architectural Services*
11. Orange Made Architecture
12. Rike Ogden Figueroa Allex (ROFA) Architects
13. Sabal Landscape Design
14. Sam Garcia Architect

*Denotes on current two year (2022-2024) rotation

Limiting the selection of firms between 3 and 5 will insure each firm will obtain a project as it arises. The current 2022-2024 rotation has 4 firms and they have received approximately 2 projects.

3. Staff's Recommendation:

Approve Awarding RFQ 2024-008, Architectural Services to Qualified Firm(s) and Authorize the City Manager or Designated Appointee to Enter Into a Professional Services Contract with Such Firm(s) as Projects Arise.

1. Introduction

1.1. Summary

The City of Edinburg's Department of Engineering is currently seeking to retain a rotation list of qualified professional Architectural firms to provide Architectural services. The term of the contract will be two (2) years from 10/01/2024 – 09/30/2026. The services request is of qualified architect firms with expertise in all phases of the design, construction, repairs, or additions of all city public buildings. It is anticipated that architectural firms will lead full teams of engineers and or related consultants as needed for each project.

2. Scope of Work

2.1. Scope of Services

The selected firm(s) will report to, and operate under, the direction of City of Edinburg's Department of Engineering staff. Must have a Texas Licensed Professionals with superior background, training, and qualifications meeting all requirements of this RFQ, Registered or licensed in the State of Texas. The scope of services required by this RFQ may include some or all of the following services:

A. **Planning research**: Review, synthesize, update and/or supplement as required completed trial court facilities master plans and/or court programs;

B. **Site analysis and consultation:** Perform site analyses, including test fits, parking, traffic, zoning, geotechnical, on- and off-site utility and related utilization studies; participate in and coordinate with AOC staff, legal counsel, consultants and real estate brokers in site selection and acquisition activities (Real Estate brokerage services are not included in scope of services of this RFQ);

C. **Land use entitlement:** Participate in the preparation of environmental studies and reports as required under CEQA and related local and state laws and regulations, and coordinate required mitigations with site and building design (Environmental site surveys and hazard documentation, EIR preparation, and site remediation services are not included in scope of services of this RFQ);

D. **City planning:** Conduct city-wide operations master planning and analysis; conduct functional programming, design definition and space planning for court building functions;

E. **Architectural and engineering design services:** Provide architectural, structural, civil, mechanical, electrical, plumbing, security, acoustical, interior design, lighting, data/telecommunications, graphics, and related services which may be required in connection with planning, design and execution of renovation and or new building projects. Special services may be requested as warranted by specific projects, including but not limited to, campus planning, geotechnical engineering; land surveys; wind engineering; vibration control; life safety/code consulting; audio visual; physical and electronic security design; parking structure design; and parking revenue control;

F. **Code analysis:** Conduct and/or participate in building, planning, access, and historical code analyses and reviews for new and existing facilities;

G. **Entitlements and approvals:** Identify, coordinate, and support the acquisition of any required entitlements or approvals by local, state, and federal agencies;

H. **Sustainable Design:** Develop, analyze, and implement programs for sustainable site and building design, including LEED goals and documentation;

I. **Contracting and sourcing:** Provide consultation on and analysis of methods of project delivery methods, such as design/bid/build, design/build, and CM @ Risk; participate in preparation of associated conventional or unique contract documents required for procurement; (Legal services, construction management, and construction services are not included in the scope of services in this RFQ);

J. **Cost analysis and schedule planning:** Provide and/or participate in all aspects of project cost estimating and schedule planning, including construction estimating, life cycle costing, value engineering, critical path and special scheduling;

K. **Design services for furniture, fixtures and equipment:** Provide all services required to properly plan, design, specify and coordinate furniture, fixtures, special finishes and equipment;

L. **Site planning and landscape architecture:** Provide all services required to, design, specify and coordinate site design, including grading, utilities, parking lots, roads, driveways, hardscape, landscape, lighting, and irrigation;

M. **Construction contract administration:** Provide construction administration services, including field observations, submittal review, testing and inspection bid document preparation (testing laboratory or construction inspection services are not part of this RFQ), requisition and procurement of specialized pricing and consideration/negotiation of changes, and project contract completion, including punch list, warranty review, preparation of record drawings and closeout;

N. **Building Commissioning:** Participation in development of building commissioning documents and procedures; specification of commissioning procedures, and participation in commissioning program. (Specialized Commissioning agent services are not part of this RFQ);

O. **Move and occupancy planning:** Planning, design and execution of temporary relocations, move planning, and start-up assistance;

P. **Public Art:** For projects that include a public art component provide the services of an artist experienced in creation and installation of artworks in and surrounding public buildings;

Q. **Project Reviews:** Participate in peer and constructability reviews of projects.

All qualified firms or persons shall have current licenses as required under the State of Texas for the provisions of services requested for the City of Edinburg.

2.2. Submittal Requirements

The RFQ must be submitted according to the instructions outlined herein. Each response should include, at a minimum, the following items not excluding the selection process criteria:

A. Transmittal letter – Indicate interest and commitment to perform services for the City of Edinburg, include contact information (physical address, telephone, fax, cell phone, and email address) for the primary person responsible for your RFQ who will be the point of contact for the City on all correspondence and communications pertaining to the RFQ.

State whether any addendums to this RFQ have been received by your firm and whether consideration of their content has been included in your RFQ. The letter must be signed by an officer of the firm who is authorized to bind the firm to contract and shall contain a statement to this effect;

B. Firm Qualification and Experience – Discuss the firm's experience and history in performing engineering and project management services in a timely manner, particularly for other governmental agencies in the past five (5) years. Discuss the firm's uniqueness to best perform these services for the City. Identify the office location that will be providing the services and the approach to handling part-time staffing needs for smaller assignments.

C. Team Member Qualifications and Experience – Submit resumes summarizing qualifications and experience of project manager, key staff and any support staff likely to be assigned to the work.

D. References – Provide at least three references (names and current phone numbers) from recent work and List all past projects with the City of Edinburg for each proposed team member. Include a brief description of the projects associated with the reference, and the role of the individual.

E. Insurance - Provide information on the types and amounts of insurance carried by the PSP, including General Liability, Auto Coverage, Worker's Compensation, and Professional Liability Coverage. A list of any insurance claims against the firm within the past 5 years.

F. Professional Services Agreement – Provide a statement that the Professional Services Agreement has been read, that the firm will meet the prerequisite insurance requirements, and the firm, if selected, agrees to enter in to such agreement.

G. Contact Information – Each firm must submit the firms two (2) different contact information (Name, Title, Address, Phone Number, Mobile Number, and Email Address).

H. Presentation – Electronic submittal only.

STATE OF TEXAS	**§**	**AGREEMENT BETWEEN THE CITY OF EDINBURG AND PROJECT MANAGEMENT CONSULTANT FOR PROFESSIONAL SERVICES PURSUANT RFQ NO. XXXX-XXX**
COUNTY OF HIDALGO	**§**	
CITY OF EDINBURG	**§**	

The City of Edinburg, Hidalgo County, Texas, a municipal corporation, (hereinafter **"City"**) and **PROJECT MANAGEMENT CONSULTANT** (hereinafter **"Consultant"**), are the parties to this Agreement.

RECITALS

WHEREAS, City has authorized staff to request proposals for the On-Call Professional Services, the Consultant shall provide for specific projects as may be requested by the City. Such services shall be defined, scheduled, and authorized in subsequent Task Orders. Services may include, but not be limited to Engineering, PROFESSIONAL SERVICES, and or other as-needed services as stated in Exhibit "A", and

WHEREAS, Consultant has the professional knowledge and abilities to perform the professional engineering and PROFESSIONAL SERVICES; and

WHEREAS, City desires to engage Consultant to render services in connection therewith:

NOW, THEREFORE, City and Consultant do mutually agree as follows:

SECTION I
EMPLOYMENT OF CONSULTANT

A. City agrees to employ Consultant to furnish and provide the Services, as stated in this agreement and **Exhibit "A"**. Upon receipt of Services to the City's satisfaction, the City agrees to pay Consultant as stated in this Agreement.

SECTION II
SERVICES OF CONSULTANT

A. The Consultant shall, in the scope of his work, perform the Services identified in **Exhibit "A"** of this document. City shall provide Consultant with authorization to proceed, after execution of this Agreement.

B. Nothing contained in this Agreement is intended by the parties to create a partnership or joint venture between the parties, and any implication to the contrary is hereby expressly disavowed. It is understood and agreed that this Agreement does not

create a joint enterprise, nor does it appoint either party as an agent of the other for any purpose whatsoever. Except as otherwise specifically provided herein, neither party shall in any way assume any of the liability of the other for acts of the other or obligations of the other.

SECTION III
RESPONSIBILITY OF THE CITY

A. City will facilitate Consultant's work with the following tasks:

1. Provide Consultant with its requirements for the Services.

2. Assist Consultant by providing information reasonably available to the City and pertinent to the Services.

3. Facilitate access to and make provisions for Consultant to enter upon public property as reasonably required for Consultant to perform its Services.

4. Examine all reports, sketches, estimates, drawings, proposals, and other documents presented by Consultant and render in writing decisions pertaining thereto within a reasonable time so as not to delay the Services of the Consultant.

5. Give prompt written notice to Consultant whenever City observes or otherwise becomes aware of any defect in Services.

6. City's representative with respect to interpretation and implementation of the Services and this Agreement will be the City Engineer or such other representative that the City may appoint by written notice to Consultant with whom Consultant will communicate regarding all matters pertaining to this Agreement. Said representative will make all arrangements for consultation by Consultant with employees or designees of City. In addition, said representative shall have authority and responsibility to define and agree upon the scope and specification of the Services, require and receive reports regarding the progress of the Services, and terminate the performance of the Services or any phase thereof in accordance with the provisions of this Agreement.

SECTION IV
RESPONSIBILITIES OF CONSULTANT

A. Consultant shall perform the Services described in **Exhibits "A".**

B. Consultant shall perform its services with care, skill, and diligence, in accordance with the applicable professional standards currently recognized by its profession, and shall be responsible for the professional quality, technical accuracy, completeness, and coordination of all reports, plans, information, and other items and Services furnished under this Agreement. Consultant shall comply with all applicable

federal, state, and local laws, ordinances, codes, and regulations in performing the Services. If Consultant fails to meet applicable professional standards, Consultant shall without additional compensation correct or revise any errors or deficiencies, with or without request to do so by the City.

C. Consultant shall be responsible for the professional quality, technical accuracy, timely completion, and the coordination of Services furnished by Consultant under this Agreement. Consultant shall keep the City informed of the Services performed under this Agreement. In connection with the performance of the Services by Consultant, Consultant agrees to promptly and fully disclose to City any information regarding the Services as City may request.

D. Consultant will develop and maintain a detailed schedule for completion of the Services. The schedule will be a work plan showing activities to be performed and their sequence; and, in addition, activities will contain duration, manpower required, and estimated cost. A preliminary schedule shall be submitted to the City within ten (10) days after execution of a Job Task Order for review and establishment of the level of detail to be included.

E. Consultant will submit monthly progress data for the reporting period which will include the percentage complete and actual start date and actual finish date for all activities worked on by the Consultant during the period. Any changes in delivery dates will be reported. Other information, such as actual hours expended, will be furnished monthly, or as requested, by the City. If requested by the City, schedule update meetings will be held to discuss the results of schedule analysis and necessary action to meet the requirements of the schedule.

F. Consultant shall perform Services necessary to accomplish the work specified in this Agreement, in accordance with this Agreement.

G. City's review or approval of reports, and other services furnished hereunder shall not in any way relieve Consultant of responsibility for the technical adequacy of the work. Neither City's review, approval, or acceptance of, nor payment for any of the Services shall be construed as a waiver of any rights under this Agreement or of any cause of action arising out of the performance of this Agreement.

H. Consultant shall be and shall remain liable, in accordance with applicable law, for all damages to City caused by Consultant's negligent performance of any of the Services furnished under this Agreement. Consultant shall not be responsible for any time-delays in the project caused by circumstances beyond Consultant's control.

I. Consultant's obligations under this clause are in addition to the Consultant's other expressed or implied obligations under this Agreement or state law and in no way diminish any other rights that City may have against Consultant for consultant's errors or omissions.

J. All reports, drawings, plans, and other documentation pertaining to the Services become the property of City.

SECTION V
PAYMENT AND FEES

City agrees to pay Consultant for recommendations, reports, design, specifications, and such other services herein contracted for as follows:

A. City hereby agrees to pay a sum not to exceed that which is included in a specific Task Order and authorized by a Notice to Proceed, notwithstanding any contrary indications that may be contained in Consultant's proposal, for services to be performed and reimbursable costs incurred under this Agreement. City shall pay Consultant for services rendered on a lump sum basis pursuant to any specific Task Order and in the manner set forth therein. Consultant shall submit all invoices to City in the manner specified herein. Except as specifically authorized by City in writing, Consultant shall not bill City for duplicate services performed by more than one person. Consultant and City acknowledge and agree that compensation paid by City to Consultant under this Agreement is based upon Consultant's estimated costs of providing the services required hereunder, including salaries and benefits of employees and subcontractors of Consultant. Consequently, the parties further agree that compensation hereunder is intended to include the costs of contributions to any pensions and/or annuities to which Consultant and its employees, agents, and subcontractors may be eligible. City therefore has no responsibility for such contributions beyond compensation required under this Agreement.

B. City is entitled to impose a set-off against payment based on any of the following:

a. Claims have been made against City based on Consultant's conduct in the performance or furnishing of Services, or City has incurred costs, losses, or damages resulting from Consultant's conduct in the performance or furnishing of Services, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, and non-compliance with Laws and Regulations;

b. Consultant has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with Services and related work;

c. Consultant has failed to provide and maintain required insurance;

d. City has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

e. City has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

f. Any Services are defective, requiring correction or replacement;

g. City has been required to correct defective Services or has accepted defective Services;

h. Liens have been filed in connection with the Services; or

i. Other items entitle City to a set-off against the payment amount.

C. If City imposes any set-off against payment, City will give Consultant immediate written notice stating the reasons for such action and the specific amount of the reduction, and promptly pay Consultant any amount remaining after deduction of the amount so withheld. City shall promptly pay Consultant the amount so withheld, or any adjustment thereto agreed to by City and Consultant, if Consultant remedies the reasons for such action. The reduction imposed will be binding on Consultant unless it duly submits written notice contesting the reduction within 30 days of receiving City's written notice.

D. All fees payable to Consultant under this Agreement shall be made in full, and without any withholding, deduction, or offset of any state or federal withholding taxes, FICA, SDI, or income taxes, nor shall the City be obligated to pay any of Consultant's employees' taxes. Consultant hereby covenants and agrees that it shall be solely responsible for all taxes, withholding, FICA, SDI, and other similar items (both employee and employer portions) with respect to all fees paid by the City under this Agreement, and agrees to indemnify and hold the City harmless with respect to such taxes and withholding.

E. Consultant and its employees shall not be eligible for, participate in, or be entitled to compensation in lieu of any insurance, benefit, retirement, or other plan or program provided by the City to its employees.

F. Consultant shall provide an invoice in accordance with City regulations. Payment terms shall be net thirty (30) days from receipt of invoice.

G. The City may, at any time, request Consultant to make changes within the scope of the Services or to perform extra work. If any request by the City for a change or extra work causes an increase or decrease in the cost or the time required for performance of the work, or any change to this Agreement, Consultant shall, within fourteen (14) days from the date it receives the City's request, unless the City Engineer grants additional time in writing, submit in writing a proposal for accomplishing such changed or extra work. This proposal shall define, if applicable, any increase or decrease in cost or time of completion or other change to this Agreement. The City must approve

any change orders, pursuant to the City's Code of ordinances and policies and procedures and any other applicable laws of this State, before making the changes. The City will not be liable for any costs incurred by Consultant from performance of a change or extra work prior to issuance of a change order to this Agreement.

H. The total contract price may not be increased because of the changes unless additional money for increased costs is appropriated for that purpose from available funds or is provided for by the authorization of the issuance of time warrants.

I. Prior to and as a condition of final payment to the Consultant following termination or expiration of this Agreement as defined below, the Consultant shall deliver to the City a release in form and substance satisfactory to the City, discharging it and its officers, agents, and employees of all liabilities, obligations, and claims arising out of this Agreement and the performance thereof.

SECTION VI
TERM OF AGREEMENT

A. Except as provided below, this Agreement, and the Services to be performed under it, shall commence on the date this Agreement is executed by both parties, and shall continue thereafter through and the earlier of (i) two (2) years from the date of execution or (ii) until the Services are declared complete in a written instrument signed by the City Engineer and the City Manager. The City shall have the right, in its sole discretion, to extend the term of this Agreement for an additional year upon approval from the City. If approved by City, City shall provide Consultant with a written notice of the approval of the extension.

B. City may terminate this Agreement upon giving 30 days' prior written notice thereof to Consultant. In addition, City shall have the right, upon written notice, to cancel this Agreement immediately if, in the City's sole judgment, the Services rendered by Consultant breach or violate any of the provisions of this Agreement.

C. Upon termination or completion of this Agreement, City shall have no liability to Consultant except for charges for Services performed by Consultant and accepted by the City prior to receipt of notice of termination or cancellation. The terms and conditions in this Agreement that by their sense and context are intended to survive the performance hereof by either or both parties hereunder shall so survive the termination, cancellation, or completion of performance of this Agreement.

D. Upon termination or completion of Consultant's Services hereunder or at such other time as may be requested by City, Consultant shall return to City within ten (10) days of termination, completion, or request all documents, records, notebooks, including copies thereof, whether prepared by Consultant or others, in Consultant's possession and related to the Services.

E. The City reserves the right to suspend work on the Services, with or without cause, in whole or in part, upon giving notice to Consultant. Consultant shall resume the Services so suspended when directed to do so by the City. The City shall have no liability to Consultant except for charges for Services performed by Consultant and accepted by the City prior to receipt of notice of suspension of Services. If only a portion of the Services are suspended, Consultant shall be compensated only for Services of which are not suspended and are actually performed during such suspension.

F. Upon termination of this Agreement or suspension of Services under this Section, the City may take over the work and may obtain the services of another entity to complete the work under this Agreement.

SECTION VII
MINIMUM INSURANCE REQUIREMENTS

Consultant shall be adequately insured and carry liability, workers compensation, automobile insurance and professional liability for injury to its employees and others incurring loss or injury as a result of the acts of Consultant or its employees. In accordance with City ordinances, Consultant shall be required to hold the following minimum insurance coverage throughout the duration of this agreement:

A. Workers Compensation
In accordance with State statute.

B. Comprehensive General Liability

1. Bodily Injury
$250,000 each person
$500,000 each occurrence
2. Property Damage
$100,000 each occurrence
$100,000 each aggregate

or $500,000 combined single limits

C. Comprehensive Auto Liability
1. Bodily Injury
$100,000 each person
$500,000 each occurrence
2. Property Damage
$100,000 each occurrence
$100,000 aggregate
or $500,000 combined single limits

D. City's Protective Liability

1. Bodily Injury

$250,000 each person
$500,000 each occurrence

2. Property Damage

$100,000 each occurrence
$100,000 each aggregate

or $500,000 combined single limits

E. Professional Liability

1. Professional

$1,000,000 per claim and in the aggregate

F. Evidence of the above insurance coverage is attached as Exhibit ”B” and the City of Edinburg shall be listed as an additional insured.

G. If at any time and for any reason Consultant fails to provide, maintain, keep in force and effect, or deliver to the City proof of, any of the insurance required and such failure continues for ten (10) days after Notice thereof from City to Consultant, City may, but shall have no obligation to, procure single interest insurance for such risks covering City (or, if no more expensive, the insurance required by this Agreement), and Consultant shall, within ten (10) days following City’s demand and Notice, pay and reimburse City therefor with interest at Prime Rate plus 2%, the Prime Rate being that in place on the date of Notice, from the date of payment by the City until repayment of City in full by Consultant.

H. With respect to each and every one of the insurance policies required to be obtained, kept, or maintained under the terms of this Agreement, on or before the date on which each such policy is required to be first obtained and at least fifteen (15) days before the expiration of any policy required hereunder previously obtained, Consultant shall deliver evidence reasonably acceptable to City showing that such insurance is in full force and effect.

I. Consultant hereby agrees as follows:

1. To punctually pay or cause to be paid all premiums and other sums payable under each insurance policy required to be obtained, kept, and maintained pursuant to this Lease;

2. To maintain in full force and effect the policies required to be carried to the extent so required to be carried pursuant to the terms hereof;

3. To ensure that all Casualty Proceeds are paid to the Party entitled to receive same;

4. Not, at any time, to take any action (or omit to take action) which action (or omission) would cause any insurance policies required to be obtained, kept, and maintained under this Lease to become void, voidable, unenforceable, suspended, or impaired in whole or in part or which would otherwise cause any sum paid out under any such insurance policy to become repayable in whole or in part; and

5. Promptly deliver Notice to City of any facts or circumstances of which it is aware which, if not disclosed to its insurers or re-insurers, is likely to affect adversely the nature or extent of the coverage to be provided under any insurance policy required hereunder.

SECTION VIII
ALTERNATE DISPUTE RESOLUTION/NEUTRAL PARTY

A. If any dispute, controversy, or claim between or among the Parties arises under this Agreement or is related in any way to this Agreement or the relationship of the Parties hereunder (a "Dispute"), the Parties shall first attempt in good faith to settle and resolve such Dispute by meeting at a mutually agreeable time and place to discuss the Dispute within seven (7) days following the original written notice of any Dispute by the party making such a claim. The Parties shall seek to resolve the Dispute in writing within fourteen (14) days following the original written notice of any Dispute by the party making such a claim.

B. If a mutual resolution and settlement are not obtained at the meeting, the Parties shall participate in good faith in formal mediation, within thirty (30) days following the original written notice of any Dispute, with a mutually agreeable mediator at a mutually agreeable time and place. No settlement reached under this provision shall be binding on the Parties until reduced to a writing signed by a representative of Contractor and the City Manager. Unless the parties expressly agree otherwise, each party shall bear its own costs and legal and expert fees incurred in the mediation, and evenly share the costs of the mediator. If after proceeding in good faith the parties, with the assistance of a neutral mediator, do not resolve the dispute within forty-five (45) days following the original written notice of any Dispute, the parties may proceed in accordance with Section IX below.

SECTION IX
CONTROLLING LAW, MANDATORY VENUE, AND FEES AND EXPENSES

A. After exhausting the procedures set forth above, either party may initiate litigation to resolve the dispute. The Law of the State of Texas shall control the Dispute. Venue is mandatory in in State courts located in Hidalgo County, Texas.

B. In the event of any litigation between the parties, the parties shall bear their own costs, including attorneys' fees and expenses.

SECTION X
INDEMNIFICATION

A. To the maximum extent allowed by law, Consultant agrees to and shall indemnify, hold harmless, and defend City, its officers, agents, and employees from any all claims, losses, causes of action and damages, suits and liability of every kind, including all expenses of litigation, court costs, and attorney's fees for injury to or death to any person or for damage to any property, arising out of or directly connected with the negligent or willful conduct of Consultant, its agents, officers and employees, carried out in furtherance of this Agreement.

B. Consultant agrees to assist City in defense of claims or litigation brought against the City related to this project, including any claims related to design or any other services provided by consultant regarding this agreement.

SECTION XI
LIMITATION OF LIABILITY

A. Consultant agrees to limit the City's liability arising from City's acts, errors, or omissions such that the total liability of City shall not exceed Consultant's total fees paid by the City to Consultant for the Services rendered pursuant to the Task Order which is the subject matter of the claim. Consultant agrees that City will not be liable for any indirect, incidental, special, or consequential punitive or multiple damages, including without limitation any damages resulting from loss of use, loss of business, loss of revenue, loss of profits, or loss of data, arising in connection with this Agreement, Consultant's performance of Services, or of any other obligations relating to this Agreement, even if City has been advised of the possibility of such damages. The foregoing limitation of liability shall apply to the maximum extent allowed by law for limitation of City's liability, regardless of the cause of action under which such damages are sought.

SECTION XII
AGREEMENT CONSTRUCTION

A. The headings of the Sections contained in this Agreement are for reference purposes only, and shall not affect the meaning or interpretation of this Agreement. The parties have been advised by counsel in connection with this Agreement. This Agreement shall be construed and interpreted in accordance with the plain meaning of its language, and not for or against either party, and as a whole, giving effect to all of the terms, conditions, and provisions of this Agreement. Nothing contained in this Agreement shall be deemed to confer any right or benefit on any person who is not a party to this Agreement.

SECTION XIII
NO PENDING LITIGATION

A. Consultant represents that there is no action, proceeding, inquiry, or investigation, at law or in equity, before any court, arbitrator, governmental or other board or official, pending to the best knowledge of Consultant threated against or affecting the Consultant or any subsidiaries of the Consultant, questioning the validity or any action taken or to be taken by the Consultant in connection with the execution, delivery, and performance by the Consultant of this Agreement to which the Consultant may be a party or seeking to prohibit, restrain, or enjoin the execution, delivery, or performance by the Consultant hereof or thereof, where in an unfavorable decision, ruling, or finding (i) would adversely effect the validity or enforceability of, or the authority or ability of the Consultant to perform, its obligations under this Agreement to which the Consultant may be party or (ii) would have an adverse effect on the consolidated financial condition or results of operations of the Consultant or on the ability of the Consultant to conduct its business as presently conducted or as proposed or contemplated to be conducted.

SECTION XIV
SEVERABILITY

A. If any term or provision of this Agreement is held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remainder of the provisions of this Agreement shall remain in full force and effect and shall in no way be affected, impaired or invalidated.

SECTION XV
NOTICE

A. Any notices to be given under this Agreement shall be in writing, (i) sent by registered or certified mail, postage prepaid, return receipt requested or (ii) sent by nationally recognized overnight courier (e.g. Federal Express) with electronic tracking, and addressed to such party as follows:

(a) Notices to the City:

City of Edinburg
415 W. University Drive
Edinburg, Texas 78539
Attn.: City Manager

With a copy to:

City of Edinburg
415 W. University Drive
Edinburg, Texas 78539
Attn.: City Attorney

(b) Notices to Consultant:

Address
City, State Zip Code
Attn.: Contact

B. Such Notices shall be deemed delivered (i) in the case of U.S. mail in the manner provided above, three (3) business days after posting or (ii) if sent by nationally recognized overnight courier with electronic tracking service, the next business day after depositing same with such overnight courier before the overnight deadline and if deposited with such courier after such deadline, then the next succeeding business day.

SECTION XVI
NON-APPROPRIATIONS

A. Notwithstanding anything in the Agreement to the contrary, any and all payments which the City is required to make under this Agreement shall be subject to annual appropriation or other availability of funds, as certified by the Director of Finance.

B. If the City cannot appropriate sufficient funding, then either party has the right to terminate the Agreement by providing ten (10) days' written notice to the other party.

SECTION XVII
SUCCESSORS AND ASSIGNS

City and Consultant each bind themselves, their partners, successors, executors, administrators, and assigns to the other party of the Agreement in respect to all covenants of this Agreement. Neither City nor Consultant shall assign, sublet, or transfer interest in this Agreement without written consent of the other.

SECTION XIX
CONFLICT OF TERMS

If any of the terms of this Agreement conflict in any respect with any of the terms of the attached Exhibits or any current or future Job Task Orders, the terms of this Agreement shall be controlling.

SECTION XX
NO WAIVERS OR ACCORD AND SATISFACTION

A. This Agreement may be amended only by written instrument signed by all parties.

B. No failure or delay of any Party, in any one or more instances (i) in exercising any power, right, or remedy under this Agreement or (ii) in insisting upon the

strict performance by the other Party of such other Party's covenants, obligations, or agreements under this Lease, shall operate as a waiver, discharge, or invalidation thereof, nor shall any single or partial exercise of any such right, power, or remedy or insistence on strict performance, or any abandonment or discontinuance of steps to enforce such a right, power, or remedy or to enforce strict performance, preclude any other or future exercise thereof or insistence thereupon or the exercise of any other right, power, or remedy. The covenants, obligations, and agreements of a defaulting Party and the rights and remedies of the other Party upon a default shall continue and remain in full force and effect with respect to any subsequent breach, act, or omission.

C. Without limiting the generality of the above, the receipt by City of any Services with knowledge of a breach by Consultant of any covenant, obligation, or agreement under this Agreement shall not be deemed or construed to be a waiver of such breach. No acceptance of Services or payment to Consultant shall be deemed to be other than on account of the earliest installment of the amounts due under this Agreement, nor shall any endorsement or statement on any check, or any letter accompanying any check, wire transfer or other payment, be deemed an accord and satisfaction. City may accept services or make payment without prejudice to its rights under this Agreement or pursue any remedy provided in this Agreement or provided otherwise by law or equity.

Section XXI
Notice of Governing Law for State and Federal Grant Projects

The Consultant agrees to abide by all applicable laws and regulations and to make all applicable records and other documentary data available at any time for the purpose of an audit and to ensure compliance with relevant State and federal laws, including but not entirely limited to, those provisions found any future Job Task Orders.

EXECUTED by the parties in triplicate originals on this _____ day of _____, 202___.

TRANSMITTAL LETTER

July 16, 2024

City of Edinburg
Mardoqueo Hinojosa, City Engineer
Attn: City Secretary
415 W. University Drive,
Edinburg, TX 78541

Dear Mr. Hinojosa and Selection Committee,

Able City, LLC is thrilled to submit our qualifications for the **Architectural Services Rotation (RFQ #2024-8) for the City of Edinburg.** *Our proposal will introduce our dedicated team, highlight our extensive qualifications, and showcase over 40 years of collective experience in city infrastructure projects and collaboration with public agencies.*

Recognizing the specific requirements and detailed scope outlined in your RFQ, we have carefully assembled a team of expert professionals who are deeply dedicated to the diverse goals set forth by the City of Edinburg. This team is committed to supporting the ongoing development and welfare of Edinburg and its community, bringing a history of collaboration with past clients, trust, and high standards to your project.

We have meticulously incorporated all issued addendums into our proposal and are fully prepared to align our strategies with the city's objectives. The primary point of contact for this RFQ, who will oversee all correspondence and communications about this proposal, is our **Principal, Ricardo Solis, AIA, LEED, AP**. *He can be reached at:*

- *Physical Address: 200 S. 10th Street | Ste. 907. McAllen, TX 78501*
- *Telephone: (956) 725-7418*
- *Cell Phone: (956) 230-7818*
- *Email Address: ricardo@able.city*

Our unique blend of expertise, a proven track record with a variety of project types and sizes, and unwavering dedication to client service position us to assist Edinburg in enhancing your city's facilities and infrastructure. We are fully prepared, eager, and excited to commence work immediately to meet and exceed your expectations.

Thank you for considering our proposal. I, Mario A. Peña, as a Partner/Principal of Able City, LLC, am authorized to bind our firm to all the statements and obligations in our submission.

Sincerely,

Mario A. Peña
Partner/Principal

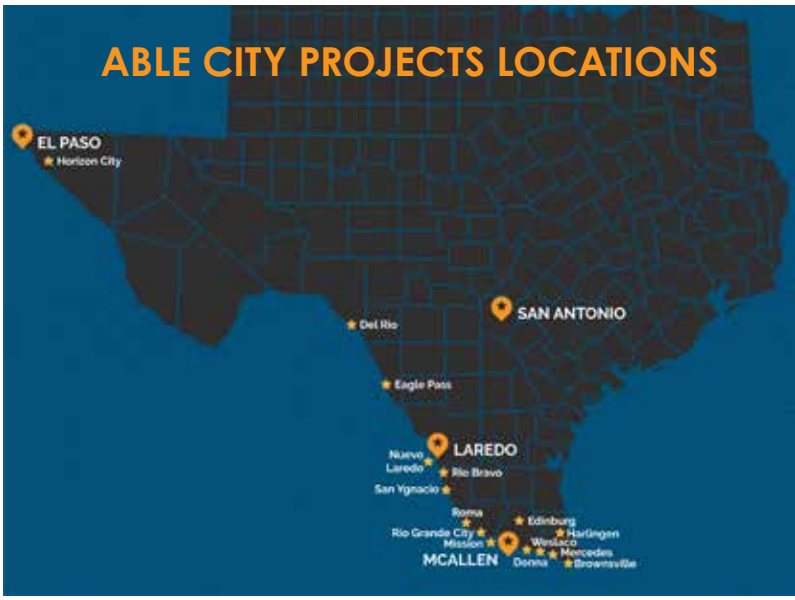
Firm Qualifications and Experience.

ABOUT ABLE CITY

PROFILE

Able City is a multidisciplinary firm focused on planning, architecture, economic development, and community engagement. We are dedicated community builders with a mission to transform urban spaces to respond to people's needs by creating environments that encourage growth, innovation, and prosperity. Our belief in empowering communities to discern their needs has led us to collaborate with community members, clients, and partners to shape an ambitious and tangible urban development vision.



What sets Able City apart is our industry-leading design methodology which folds in these disciplines to take a global approach to every project—mindful that each discipline affects and informs the others in the context of place-making.

Able City does not look at isolated components of a project but instead presents a holistic approach that respects the interconnected and symbiotic relationship of all facets. This synchronistic approach allows us to draw on a wide variety of resources and assets for our clients to improve spaces, neighborhoods, cities, counties, and regions while finding the right balance of architectural design, urban planning strategies, and land use for our clients.

We confirm that the primary office providing services for the City of Edinburg's will be our McAllen location. This strategically situated office enhances our ability to efficiently manage projects within Edinburg and its surrounding areas. We want to mention that 76% of our staff is bilingual. We understand the people, culture, and language of the border area unlike any other firm.

Our understanding of the unique dynamics and opportunities in this area allows us to implement projects that leverage the area's rich cultural heritage and economic strengths. By embedding local cultural and economic elements into our work, we aim to foster sustainable and inclusive growth. Our commitment to Edinburg and broader Texas region is evidenced by our extensive portfolio of completed works, which reflects our deep involvement and the positive impact we strive to make across this dynamic area.

PROFESSIONAL SERVICES

PLANNING RESEARCH

Pre-design work is the foundation of an effective, efficient, and seamless project and it begins with a collection of data. Also, as urban planners, we always design with sensitivity to building scales, economy, transportation, and environmental developments of the extended region.

SITE ANALYSIS AND CONSULTATION

Every project is about a place. One of the main opportunities of the project is the integration of a renovated, adapted structure into an existing historic neighborhood. Our team includes dedicated architects, also experienced in historic preservation and in building adaptations and renovations, strategically planned for long-term development and growth.

LAND USE ENTITLEMENT

Our years of work in both the public and private sector working on large undeveloped tracks have given us key insights into the interactions between entitlements and desired community outcomes. We have a fully developed understanding of the impact land use may have on land value, and quality of place, as well as how it may impact pace of growth, and support public transit, and mobility.

CITY PLANNING

Urban Planning is essential for inner-city projects because they directly impact a neighborhood's livelihood and character, and therefore the users and the residents of the area. Every project has the potential to enhance/connect/support the community. And, therefore, community engagement is essential to creating a solution of and for the people.

ARCHITECTURAL AND ENGINEERING DESIGN SERVICES

We believe architecture has memory, a relationship with a piece of land, an environment, a city, a culture, a history, a client and an economy. Our design philosophy is to take all into account, work collaboratively, and build solutions based on data and evidence. Design opportunities are revealed when project challenges are defined. We do not begin projects with preconceived ideas, but rather begin by learning through research and listening closely to our clients in order to truly understand the particular project goals, opportunities, and challenges.

CODE ANALYSIS

Our highly experienced team has worked on many public projects to bring their existing facilities into compliance with ADA, Life Safety, and ICC Building Codes. In addition, we have extensive experience with zoning codes and ordinances.

ENTITLEMENTS AND APPROVALS

Able City is well-versed in coordinating approvals from all levels of jurisdictions and regulatory authorities. We work closely with the owner to coordinate the acquisition of any required documentation and approvals.

SUSTAINABLE DESIGN

The Team staff includes two LEED Accredited Professionals. However, we feel sustainability extends beyond the environment. Sustainability must include the ongoing development of social capital through improvements made on the campus. Proximity is the key to developing achieving sustainable developments.

Able City's sustainable development projects use local participatory design processes to holistically integrate ecological, economic, social, and cultural dimensions of sustainability in order to regenerate social and natural environments.

We are committed to sustainability across all projects and believe this approach, to sustainable land use planning and development, improves the well-being of people and their communities; shaping their environments into healthier, efficient, and more memorable spaces.

This translates into various strategies such as place making and form-giving, implementing alternate energy sources such as solar and wind, water conservations, mobility options, walkability, low impact development, building orientation, and clustered development to optimize topography and minimize ecological impact.

CONTRACTING AND SOURCING

Throughout our 40 years of combined experience, Able City has built strong relationships with subconsultants and contractors throughout Texas and the Nation. We have shown in the proposal a strong team to address the majority of your needs, but in the event a project requires a specialty consultant, we can easily source the right person for the job.

Canseco House Rehabilitation, Laredo Food Policy Council Headquarters

Our process also fosters an environment of integration and communication with contractors, manufacturers, product reps as we vet building systems for sustainability, availability and proximity of source.

COST ANALYSIS AND SCHEDULE PLANNING

The teams' extensive database of past projects allows our team to select materials, designs and systems that will be most cost effective and maintain the project budget. Much can be done to achieve a balanced program and budget by creating options for space and quality requirements and other features. As the project moves into design, the design evolves within the confines of a set budget. Costing procedures typically include development of a component budget system and execution of an opinion of probable costs at the end of each phase to reconcile building costs with the budget.

We understand the importance of maintaining the project schedule to the best stewards of our clients' resources. From the beginning of a project we will need to determine critical Owner milestones and meeting dates for all approving entities. From this data we will produce a schedule for the design activities on the project. Once produced, we solicit the written commitment of each team member to the schedule.

DESIGN SERVICES FOR FURNITURE, FIXTURES AND EQUIPMENT (FF&E)

Much of our public sector work has included providing design and selection. We have experience procuring through government pre-contracted vendors which we utilize to achieve ultimate expediency and control of the purchased item. For projects where a variety of products and/or budget is of utmost priority, we develop FF&E bid packages that include a level of detail and design intent that both yields expected and desired products and promotes competitive bidding.

SITE PLANNING AND LANDSCAPE ARCHITECTURE

Able City's approach to landscape architecture strives to connect the design to the existing social, ecological, and soil conditions. Our ultimate goal is to provide a good quality of life by preventing soil erosion around buildings and other developed areas, encourage groundwater recharge, and offer valuable shade to protect buildings and people. Choosing native plants allows developed landscape to coexist with nature, rather than compete with it. Native plants manage stormwater, reduce maintenance and promote plant and wildlife conservation.

CONSTRUCTION CONTRACT ADMINISTRATION

We have developed helpful forms and protocols to maintain the entire team informed of all aspects of the construction phase. These include a project worksheet which is updated with all the critical data for construction like current scheduled completion date, rain delay log and allowance balances. We also keep and administer a master project action item agenda which logs all team tasks and assigns responsibilities to team members. This has proven a powerful tool for efficiency and accountability.

Villa Antigua Renovation and Preservation, Laredo, Texas

BUILDING COMMISSIONING

Able City prides itself on being responsive to clients and ensuring that projects are successful. A major part of a buildings' success is commissioning the building so that operations and maintenance of the facility don't become a burden on the client. Building Life Cycle planning and system durability and performance are key components of our product selection and system design process. We don't go away when the owner moves in, we stay involved and provide assistance with any issues that arise post occupancy.

MOVE AND OCCUPANCY PLANNING

Able City specializes in programming and space planning. By understanding the problem and working with the owner to define all requirements, identify all challenges, and provide scenarios to assist in decision matrices; we narrow in on the preferred solution and create the most efficient process and outcome. Renovations, adaptive reuse, and Historic Preservation are passions and strengths of our firm, and we enjoy solving our clients puzzles.

PUBLIC ART

We recognize local and regional arts and culture as the foremost indicator of the community's unique identity. Arts and culture cultivate civic pride and identity and are an essential component to economic development and for attracting and retaining talent. Because we think this element is so important to a community's success, we have integrated its procurement methodology, funding mechanisms, and writing of supporting policy into our core competencies and we have put that into practice as we have written comprehensive plans and neighborhood plans. Examples include Viva Laredo Comprehensive Plans and El Milagro (Sharyland/Mission) Master Plan Charrette.

PROJECT REVIEWS

The firm uses extensive procedures for quality oversight at all critical milestones of a project. We have implemented procedures used by ISO certified firms that include peer reviews and interdiscipline draft reviews and have enjoyed a measured reduction in RFI's because of it.

ABILITY/AVAILABILITY TO DELEGATE

Able City possesses the ability and availability to delegate work to other offices if needed for the City of Eagle Pass. It is already common practice for our project teams to support each other no matter from which of our locations a project is primarily managed.

Able City was established in Laredo, Texas, and has since opened three additional offices—San Antonio, McAllen, and El Paso, Texas. ***While headquartered in San Antonio, Able City functions as one cohesive unit***: everyday business is seamlessly conducted among our internal staff through the use of e-mail, phone, and by using the video conferencing features of ZOOM. Often times project team members are located across our several offices, and while we prefer face-to-face, in person conversation and collaboration—as most people do—we successfully execute our professional services within project timelines and budgets.

Although principals are primarily located at each of our locations (due to personal living locations), it is common practice for all partners, principals, project managers, and staff to commute to any of our locations depending on project needs.

Likewise, project location does not constrain Able City's project teams from traveling to job sites when necessary, even if that job site is closer to one of our other offices.

Because Able City possesses the ability to seamlessly work and to delegate work among our offices, it even leads to better collaborate with our sub consultants.

San Antonio Partner/Principal collaborating with our Laredo-based team.

We specialize in designing for border communities because we are part of the border community.

AMERICAN INSTITUTE OF ARCHITECTS 2030 COMMITMENT

Sustainability Commitment

At Able City we are committed to serve as stewards of the planet's resources, and stand up locally by joining an industry-wide movement toward more sustainable building practices.

As a signatory firm of the AIA 2030 Commitment, we have began phasing our employees through the AIA 2030 series lectures to establish a knowledge base from which to reinvent our design approach.

Our commitment involves designing for carbon neutrality in all new construction and major renovation projects by 2030.

During the pre-design and design phase, our client will be provided with the option to incorporate sustainable strategies for the following:

A. Life-cycle cost analysis (LCCA) : Three alternatives for one building system analysis.

B. Whole Building Energy Simulation (WBES) at Design Development and 90% Construction Documents.

C. Daylight Simulation Analysis for all Regularly Occupied Spaces.

D. Preliminary Assessment of LEEDv4 Standards for Green Building Design.

HEALTH, WELLNESS & ACTIVE DESIGN

Able City defines the term "health and wellness" to be the sustained physical, emotional, and social health of a community. Through targeted programming, planning, architecture and engineering, all of Able City's projects strive to have a positive effect on the community's health and well-being.

For a better quality of life, Able City supports the health and wellness of our clients and our community by implementing the following active design strategies:

Active Transportation: alternative modes of mobility including walking and biking

Active Recreation: providing physical activity places and spaces for all ages, interests and abilities

Active Building Design: design strategies in building design that focus on physical activity in daily life and a safe building environment

Access to Nutritious Foods & Food Safety: improving access to healthy food systems and nurturing local sources, particularly in communities and neighborhoods that need it the most, such as those in "food deserts"

Through Able City's Fitwel participation, we offered our clients evidence-based Covid-19 mitigation services based on real-time data from the CDC.

EVIDENCE BASED DESIGN

Able City approaches all of its projects to achieve healthier lifestyles by implementing "evidence based design," which the Center for Active Design (CfAD) and the Fitwel program define as "development and operational strategies to support healthy communities."

Fitwel is the world's leading certification system, created by the Center for Disease Control (CDC) and the General Services Administration (GSA) and Administered by the CfAD. Fitwel was created by the Center for Disease Control (CDC) and the General Services Administration (GSA) to be the world's leading certification system.

THE FITWEL PROGRAM WORKS TOWARDS TRANSFORMING DESIGN AND DEVELOPMENT PRACTICES THAT SUPPORT HEALTH AND WELLNESS IN PRIVATE AND PUBLIC SPACE.

Members of Able City are "Fitwel Ambassadors" and, as applicable, are ready to take your project through the Fitwel program.

Reducing chronic and preventable diseases in cities starts with the buildings we spend most of our time in. Able City has therefore prioritized health and wellness for a long time, preparing it to respond quickly to COVID-19 in assisting its clients with viral mitigation services for their new and existing facilities. Viral mitigation strategies include but are not limited to evaluating public and private spaces as they relate to safe distancing planning, plan phasing, reconfiguring flex spaces, existing mechanical system evaluations, analyzing building air quality, introducing hands-free "touchless technologies," educational signage, and health promotion programming.

Good design is not only essential in promoting employee wellbeing, it can also improve company performance by lowering absenteeism and increasing overall productivity. As much as Able City is responding to the particularities of the current crisis, designing for health and wellness is not a new, one-time concern for us—it's core to who we are.

PROJECT PROCESS: DESIGN

Pre-design work is the foundation of an effective, efficient, and seamless project. Every project is about a place. One of the main challenges of our priority project is the integration of new, renovated or adapted structure into an existing campus and neighborhood. Our team includes dedicated urban planners who strategically plan for long-term development and growth, with sensitivity to building scales, economy, transportation, and environmental developments of the extended region. We have provided the following approach based on the CM-at-Risk delivery method, knowing full well that the contract type changes depending on the needs of each project.

1. COLLECT, ORGANIZE, ANALYZE DATA

Review any original design goals for the facility.

2. ESTABLISH GOALS

Obtain input from appropriate key decision-makers. Submit written goals, and document and obtain approval of goals to help assure that nothing has been overlooked.

3. DETERMINE NEEDS

Determine space requirements, budgets, schedules, construction quality and staff/ equipment needs.

4. STATE PROBLEMS

Define unique requirements, budget impacts, spatial environment, and future needs.

5. DEVELOP OPTIONS & TEST CONCEPTS

Develop concepts regarding building organization, access, space relationships, separations, adapPartility, iconography, and security.

6. BUDGETING & COST CONTROL

Much can be done at this point to achieve a balanced program and budget by creating options for space and quality requirements and other features. As the project moves into design, the design evolves within the confines of a set budget. Costing procedures typically include development of a component budget system and execution of an opinion of probable costs at the end of each phase to reconcile building costs with the budget.

7. SCHEMATIC DESIGN

Schematic design arranges the space flow into the optimum arrangement for operations and occupant comfort. Schematic design is the time when major components of the design are identified and a more accurate cost estimate is developed. During this phase, work plans are updated, spaces laid out, and building systems are defined.

8. DESIGN DEVELOPMENT

Following owner schematic design approval and authorization to proceed, design development documents are prepared. These include site plan and floor plans, elevations, MEP and structural drawings, wall and building sections, estimates of costs, and an updated project schedule. This design effort includes key consultants.

9. INTERIOR DESIGN

The thoughtful integration of interior finishes, materials selection and color into the architectural components of a building bring our projects to life. Interior design enables a building to communicate through wayfinding, color identification and graphics and can address life safety and security concerns. Materials selection is also critical to both routine maintenance and the life of the building.

10. CONSTRUCTION DOCUMENTATION

Upon approval of the final design, the construction documents phase begins. During this phase, construction drawings, specifications, bid guidelines, and a final opinion of probable cost are developed. As work proceeds, we will continue to review the plans and specifications with you on a regular basis.

11. QUALITY CONTROL

Implement rigorous quality control measures at every phase to ensure that all aspects of the project meet or exceed the established standards. Regular audits, peer reviews, and compliance checks will be integral to maintaining quality throughout the project lifecycle.

PROJECT PROCESS: CONSTRUCTION PHASE

Our standard project management procedures ensure continuity and expertise throughout our projects. We maintain this by involving the same personnel in both the production and administration of construction documents during the construction phase. This approach guarantees a seamless transition between project phases, reduces miscommunication, and enhances overall efficiency. Having a consistent team from start to finish not only deepens their understanding and ownership of the project but also provides our clients with knowledgeable and efficient service throughout the construction process.

12. SETUP ORGANIZATIONAL DOCUMENTS

We have developed helpful forms and protocols to maintain the entire team informed of all aspects of the construction phase. These include a project worksheet which is updated with all the critical data for construction like current scheduled completion date, rain delay log and allowance balances. We also keep and administer a master project action item agenda which logs all team tasks and assigns responsibilities to team member. This has proven a powerful tool for efficiency and accounPartility.

13. SITE MEETINGS

Levering the local location of key staff members, our team, including the principal in charge, will attend bi-weekly or weekly meetings as well as any other meetings necessary to resolve any items that come up during construction.

14. SUBMITTAL & RFI SCHEDULES

We plan and keep excellent records for the benefit of client to ensure accounPartility timely responses to the contractor's questions and submittals.

15. COMMUNICATION PROCEDURES

Our staff is always connected and available. We will assign a project manager for each of the projects that will act as liaison fielding any and all communications, ensuring prompt and adequate responses.

16. SCHEDULE TRACKING

We routinely track the construction schedule to make sure adequate resources and attention is paid to critical path items. We work hand-in-hand with the contractor to dissolve any obstacles hindering timely completion regardless of which party is responsible.

17. FIELD REPORTS

Every discipline will be produce routine field reports in order to inform the team of issues before they hinder timely completion or represent a costly correction.

18. CITY INSPECTION ASSISTANCE

We have an excellent grasp of local regulatory processes to achieve milestones and final inspection approvals. We will assist in critical inspection walk-throughs to ensure the most efficient route toward occupancy.

19. PUNCH-LISTS AND PROJECT CLOSE-OUT

Punch lists are better done often and early. Prior to the final and official punch-list, we will have already given the contractor substantial feedback to aid the preemptive correction of issues. Upon giving our final punch list to the contractor we will follow with adequate site visits to ensure all corrections are completed in a timely basis.

20. BEYOND CLOSE-OUT

Our ultimate goal is to maintain long-lasting relationships with our clients. Able City prides itself on being responsive to client's needs and ensuring that all our projects are successful. Our job is not done after closeout. We continue to serve our client's needs well beyond the warranty period. We are here to help and don't mind answering questions or chipping in wherever we can.

EXPERIENCE WITH PUBLIC AGENCIES

Able City has vast Experience working with Public Agencies, from Independent School Districts and Public Higher Education, to municipalities, cities, counties, and states. ***After 4 decades of experience working with Public Agencies, we have abundant knowledge and experience working with Public Agency Procedures and Requirements.***

Below is a snapshot of our public agency clientele.

PLAZA THEATRE

Location: Laredo, Texas
Owner: City Of Laredo
Completion Date: Ongoing Project

The City of Laredo intends on restoring this historic symbol of downtown and creating economic development opportunities for persons of low income. Located in the heart of downtown, the Plaza Theater renovation is expected to generate activity that would further spur economic development in the Central Business District. The renovation process includes developing the property into a multipurpose performing arts center".

BOULEVARD OF THE AMERICAS FOUR BLOCKS

Client: City of Laredo
Location: Laredo, Texas
Year: 2019

"Boulevard of the Americas"—the four-blocks at Laredo's Port of Entry leading I-35 to the Lincoln Juarez Bridge—is connected by this master plan to the down ramp and the riverfront. One the region's first highway conversions, Boulevard of the Americas sits at the beginning of IH35 on the Texas-Mexico border and the middle of Downtown Laredo. It is in this junction the city sought to create a worthy international welcome and send-off and to re-stitch its historic downtown across the highway that tore down so much of its historic core and critical local connectivity. The conversion will transform 12 lanes of traffic into an urban boulevard. Which balances local needs and downtown walkable commerce with the international traffic of millions of vehicles per year. The plan includes land-use and design standards to guide appropriate development along its edges.

The Public art component is elemental and we have been coordinating with the local arts commission and local artists to formulate an arts program and identify funding sources. Of note is our work with TxDOT and the MPO through this process. Citizen mandates went a long way to move the needle forward on this project.

CITY OF LAREDO TENNIS COMPLEX AT TAMIU

Client: City of Laredo
Location: Laredo, TX
Year: Ongoing

In November 2014, Laredoans originally passed a proposition authorizing the City of Laredo to finance a Sports Complex to be sited at Texas A&M International University. Our firm was chosen to develop a master plan that included baseball/ softball fields, soccer fields, a tennis center and hike and bike trails on approximately 110 acres on the eastside of the TAMIU campus. The master plan included (12) twelve Pony League/ softballs fields, (6) six NCAA fields, (3) three soccer fields and a tennis center with (21) twenty one regulation tennis courts.

CITY OF LAREDO AIRPORT RESCUE & FIGHTING STATION

Location: Laredo, Texas
Size: 15,000 sq. ft.

Project Description: The City of Laredo Airport Rescue and Fire Fighting Station was a joint project with URS. The project included 3 apparatus bays, administrative offices, shared gathering areas, and 6 double occupancy dorm rooms. The project was designed to create zones between the service areas and private sleeping areas. The shared public/administrative areas would serve as a buffer from the work areas to the sleeping areas. An emphasis was placed on fire fighter well-being and overall functionality of the building. URS provided programming and MEP services, with the architectural team providing all other services. Our principal, Ricardo Solis, AIA, completed this project while principal at another firm.

JAMES & MARIA HAYNES RECREATIONAL CENTER

Project location: Laredo, TX
Owner: City of Laredo
Const. Cost: $13 M
Date of Completion: 2012

The facility was planned as a multi-use activity center designed around the idea that recreation and environment go hand in hand in the health of an individual and a community. James & Maria Haynes Health and Wellness Center is the first 45,000-square-foot building with the green roof in Laredo. Inside is a double gymnasium; cardio-fitness and weight-training area; a dance studio, media room, lounge, and health-food concession stand; an upper-level walking and jogging track; locker rooms, and special need rooms. Outside: a swimming pool, community garden, jogging track, bathroom facilities, and a recycling and composting center.

AWARDED

Excellence in Green Building Design Award by the Green Dot International Design Competition

INTERNATIONAL BRIDGE OF THE AMERICAS

Client: City of Laredo
Location: Laredo, TX
Const. Cost: $8.5M
Date of Completion: 2009

The Bridge of the Americas includes a North Plaza and the City of Laredo's Bridge System's Command Center. The North Plaza consists of 30,000 square feet of retail, a duty-free store, restaurant establishments, and also as a gathering place and receiver for the thousands of people that cross into Mexico daily.

The Bridge System's Command Center consists of a 14,000-square foot building which manages all four international bridges. It is also used for Bi-national meetings and conferences housed in a second-floor conference suite with an adjoining terrace.

AIRPORT FEDERAL INSPECTION STATION

Laredo, TX
Owner: City of Laredo
Const. Cost: $2.4M
Date of Completion: 2011

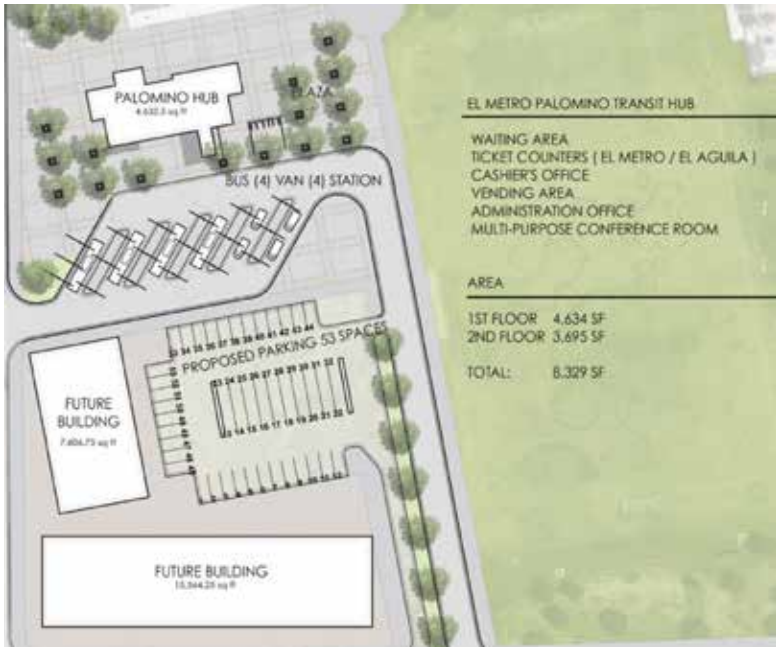
The Federal Inspection Service Facility (FIS) is the first of its kind. This building facilitates the arrival, clearance, and departure of international aircraft carriers, for cargo as well as private use. It hosts the first Mexican Customs on U.S. soil, which clears south-bound planes for international commerce.

WEBB COUNTY SHERIFF ADMINISTRATION BUILDING

Project location: Laredo, TX
Owner: Webb County
Year of completion: In progress
Budget: $5.3 M

Office for Webb County and City of Laredo at former HEB Downtown. Able City completed the Webb County Comparative Feasibility Study on the Former HEB and TEXMEX Properties and the Trillion Building Use, Space Planning, and Feasibility Study on the Former HEB property.

The building use, space planning, and feasibility study was developed to accompany Trillion's market analysis as well as research of potential incentives for the investment. From the collected information, and following a series of programming workshops, we completed space planning of various tenant mix scenarios including office use, retail, and housing.



EL METRO PALOMINO HUB

Project location: Laredo, TX
Owner: El Metro Transit
Year of completion: In progress
Budget: $3.2M

Palomino HUB is a collaboration between, El Metro Transit, El Aguila Rural Transit, Laredo College, and City of Laredo. The facility is designed to leverage available resources and respond to each stakeholder need such that the program could advance all their missions simultaneously. it will serve as a transfer hub between El Metro and El Aguila clients. Located on a college campus, it will also server commuting students from within and outside the city. It includes off- street bus bays, indoor and outdoor waiting areas, administrative offices and conference rooms.

VIVA LAREDO COMPREHENSIVE PLAN

Project location: Laredo, TX
Owner: City of Laredo
Const. Cost: $300,000
Date of Completion: 2017

Our team of professionals collaborated with the city of Laredo to develop its comprehensive plan. Viva Laredo is a plan created through an inclusive, participatory public process that presents both grand vision and a practical plan to accomplish those goals. The Comprehensive Plan process was interactive, bilingual and included a 10-day charrette and other workshops in multiple areas throughout the city.

The team hosted the first New Urbanism film festival, the event featured films projected on a outdoor screen outside the Laredo Plaza Theater. The festival focused on how many cities have dealt with a variety of issues plaguing their communities and how they developed a plan to bring more life to their cities

AWARDED

Merit Award –Excellence in Urban Design, Placemaking, and Community Building Award by the Congress of New Urbanism (CNU).

VILLA ANTIGUA BORDER HERITAGE MUSEUM

Location: Laredo, Texas
Owner: Webb County
Construction Cost: $1,100,000
Date of Construction: 2006

Above the banks of the Rio Grande in the heart of the Laredo's San Agustín Historic District, the Villa Antigua Border Heritage Museum occupies a restored early 20th century two-story brick Italianate residence. The structure was constructed by a local Laredo merchant and served as home to two different prominent families. By the late 20th century, however, the historic structure was derelict, gutted by fires and suffering from neglect. Headed for demolition, the historic structure was acquired by the Webb County Heritage Foundation and Webb County.

The restoration project preserves much of the original exterior architectural character while transforming the interior into a modern showcase for exhibits exploring the region's history and culture. Administered by the Webb County Heritage Foundation, the museum also provides a forum for educational seminars as well as an archive for important artifacts and documents from Laredo's past. This design consists of the restoration of four historic downtown Laredo structures for cultural and educational activities.

CANSECO DEL VALLE HOUSE

Project Location: Laredo, TX
Owner: City of Laredo
Const. Cost: $800,000
Date of Completion: 2018

Summary:
Working with city of Laredo and local food sustainability advocates In efforts to challenge Laredo's food desert status, urban agriculture advocates came together with the purpose of providing food options for Laredoans. Our team, together with City staff and local food sustainability advocates, pushed for local food sustainability policies. The City of Laredo was able to pass the first Urban Agriculture Ordinance, facilitating the process for Laredoans to cultivate their own produce. Along with District III Council member Alex Perez, advocates for community supported agriculture will be able to house a pilot sustainability center at the Canseco House that will look into water and soil conservation, inner-city land management, and local food sustainability.

CHILDREN'S ADVOCACY CENTER LAREDO–WEBB COUNTY

Location: Laredo, TX
Owner: Webb County
Construction Cost: $ 2,000,000
Date of Construction: 2006

The Children's Advocacy Center Project provides Laredo and Webb County with a new state of the art 11,000sf facility on 1.2 acres. The garden at the center of the facility is bound on four sides by four protective homes. Each home houses the tools for a child's recovery from child abuse. Some of the services offered are forensic interviews, individual and family counseling, coordination with partner law enforcement agencies, facilitation of victim compensation applications. When children enter, they do not feel lost as they move through the services because they can always orient themselves with the center garden.

AWARDED

Outstanding Architecture Design and Achievement by the AIA Lower Rio Grande Valley.

BIBLIOTECHS CASA VERDE, ANA LOZANO, DEL MAR, & RUSSELL TERRACE

Location: Laredo, TX
Owner: Laredo Housing Authority
Construction Cost: Various
Date of Construction: All ongoing

Able City worked with the Laredo Housing Authority, in partnership with Bexar County and Bibliotech San Antonio, to adapt and implement four digital library programs in Laredo. A local initiative lead by the Laredo Housing Authority, the project is part of Laredo's Inner City Revival Plan. These Bibliotechs bring technology and digital library services to lower-income housing and community residents.

Able City developed a series of programming and architectural standards for Bibliotech's implementation in the city. BiblioTech Casa Verde, the first of 4 of our designs to be built, is integrated into the Casa Verde Apartment complex having converted the space originally allocated for a fitness center. The facility includes a classroom, computer center, and a children's learning space.

BiblioTech Russell Terrace, the second Bibliotech in Laredo is located inside Russel Terrace Community Housing with 138 lower-income RAD units and is part of Laredo's Inner City Revival Plan.

BiblioTech Ana Lozano is centered in a residential area with a multipurpose room, learning lab, and outdoor community area. This was the first prototype for BiblioTech to include an outdoor community area to offer a combined virtual and physical experience for children.
BiblioTech Del Mar is in the early stages of schematic design.

SOUTH TEXAS FOOD BANK

Project location: Laredo, TX
Owner: South Texas Food Bank
Year of completion: 2019
Budget: $2,121,988

The new South Texas Food Bank Facility expanded from 34,000 square foot to a 93,000 square foot new facility. This new facility also comes with a state of the art community kitchen and recreation center. The new facility will not only serve the people of Laredo but the entire eight county service area of Webb County.

SAN AGUSTIN PLAZA MASTER PLAN, REHABILITATION, & PLAZA IMPROVEMENTS

Location: Laredo, Texas
Owner: Diocese of Laredo
Construction Cost: $11,000,000
Completion Date: In progress

In 2014, we began our work to assess, restore, rehabilitate, and improve Laredo's most recognizable historic structure. The focus on the building itself was broadened to include the transitional spaces or plazas to the west and south of the tower. These plazas play a critical role in the experience of the Cathedral's visitors, and to the urban life playing out in the city around it. Our design balances the public nature of the plaza and gardens with the need to provide contemplative spaces for religions functions.

AWARDED

2021 Design Award by the AIA Lower Rio Grande Valley

BI-NATIONAL RIVER CONSERVATION PARK

Client: City of Laredo
Location: Laredo, TX / Nuevo Laredo, MX
Year: Ongoing

Los Dos Laredos Bi-National River Conservation Park Laredo, Texas, and Nuevo Laredo in Tamaulipas, Mexico—known colloquially as Los Dos Laredos—were a single city divided by the Rio Grande River until 1848, when a treaty established the international border in the river. But the cities remain entwined. The port there is a major trade route and crossing point between the countries. And, of course, ecological systems know no international boundaries. Biodiverse creeks feed into the Rio Grande, and the region is an important migratory route for birds, butterflies, and other wildlife.

Plans are now underway for a binational park that would reunite the cities along a 6.3-mile stretch of the river.

AWARDED

2023 Studio Award by the Texas Society of Architects

RIO GRANDE VEGA LANDS MASTER PLAN

Location: Laredo, Texas
Owner: City of Laredo
Year: 2009

The master plan includes four miles along the Rio Grande and will guide long term development of a regional park system. The master plan also identifies and recommends projects that will provide economic development, eco-tourism and downtown revitalization. This project is in association with Carter and Burgess.

EL METRO COMPREHENSIVE OPERATIONAL ANALYSIS

Client: El Metro Transit
Location: Laredo, TX
Year: 2021

Able City lead the community engagement effort for the El Metro Comprehensive Operational Analysis. The team conducted a series of public meetings, pop-ups, and stakeholder meetings to listen and learn from riders and non-riders of El Metro. For this project specifically community engagement was vital to the comprehensive analysis, as the technical team analyzed the existing conditions and conducted a gap analysis Able City understood the challenges and constrains that riders and non-riders face. The collaboration of the technical team and the community engagement which included riders and non-riders team produced the recommendations for a new network plan.

NORTH CENTRAL PARK

Client: City of Laredo
Location: Laredo, TX
Const. Cost: $8.5M
Year completed: 2012

North Central Park is North Laredo's largest city park. Its system of trails and walks interconnects over 6,000 households in North Laredo. We were responsible for programming destinations along the trails and creating Architectural and way-finding standards. We also designed the Trailhead facility, the Pool Complex, and a future Pony League Baseball Complex.

The trails now connect to multiple on-street bike lanes that were planned by our team for the Viva Laredo Comprehensive Plan.

CITY OF COTULLA, TX
NEW CITY HALL

Location: Cotulla, TX
Owner: City of Cotulla
Construction Cost: $2,800,000
Date of Construction: 2020

The recently completed New Cotulla City Hall Project consisted of the stabilization and restoration of the building's two original historic facades (circa 1925) in the Spanish Colonial Revival style, and included the construction of a new building behind the existing facades that houses Cotulla's City Hall offices. Substantial structural efforts were made to stabilize and preserve the historic facade.

This project demonstrated economic viability to incentive historic preservation as means of economic revitalization for an under-served and isolated community.

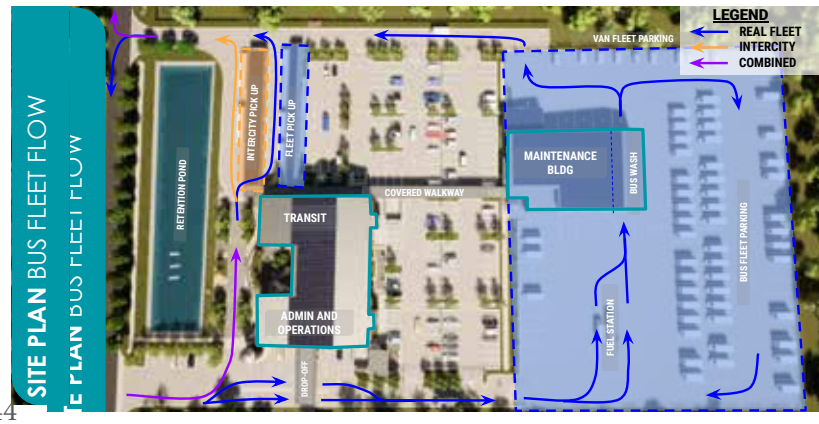
Before

SOUTH TEXAS INTERNATIONAL AIRPORT

Client: Edinburg Economic Development Corporation
Location: Edinburg, Texas
Const. Cost: $1496,888
Year: 2015

The U.S. Customs and Border Protection/South Texas International Airport at Edinburg is a 580-acre, user-fee airport, as designated by the U.S. Customs Service, as well as a Foreign Trade Zone. It is a notable asset to the City of Edinburg's economic development and is poised to become significantly more important to the Rio Grande Valley and the Texas border region in the foreseeable future.

R.E.A.L. MULTIMODAL TRANSIT CENTER



Client: R.E.A.L. Inc.
Location: Beeville, TX
Year: ongoing

The R.E.A.L. Inc. Multimodal Transit Center envisions a new multi-modal facility to include a transfer station, passenger and driver amenities, administrative offices, park-&-ride site, and ride sharing services. The client is set on sustainable design with the intent to achieve Silver LEED Certification by using local and nearby resources for construction materials, such as photo-voltaic power, rainwater collection, and site design for low impact development.

The interior rooms are wrapped around an atrium-style training room and an outdoor plaza area where offices and internal spaces can benefit from natural lighting and green views. The training room doubles as a venue that can be booked by the public for events. A maintenance facility will serve the entire fleet, where buses will be serviced, washed, and repaired. Additionally the team worked on assisting in successful funding pursuits that have allowed the project to move into the construction document and bidding phases, applying and securing grants to facilitate the development of REAL's new multi-modal facility.

DIMMIT COUNTY COURTHOUSE RESTORATION

Location: Dimmit County, Carrizo Springs, TX
Owner: Dimmit County
Construction Cost: $ 2,643,000
Date of Construction: 2005

The Dimmit County Courthouse Restoration Project began with a master plan that included physical investigations, prioritized preservation efforts and needs, programmatic requirements and needs and a proposed budget. Following the completion and acceptance of the Dimmit County Courthouse Master Plan by the Texas Historical Commission, preservation / restoration documents were developed and construction began in 2004. This project was funded by the THC Courthouse Preservation Grant.

AWARDED

Award of Excellence in Historic Architecture by the Texas Historical Commission.

EAGLE PASS DOWNTOWN MASTER PLAN

Client: City of Eagle Pass
Location: Eagle Pass, TX
Year: 2022

The Eagle Pass Downtown Master Plan is a visionary plan that seeks to revitalize the city's downtown area and create a vibrant, thriving center that attracts residents and visitors. The downtown master plan is designed to provide a road map for the city's future development and growth, while also preserving its rich history and cultural heritage.

The downtown master plan was be developed in collaboration with city officials, stakeholders, and residents, with the goal of creating a comprehensive vision for the future of downtown Eagle Pass. The plan will focus on the revitalization of key areas of the downtown, including downtown business, historic buildings, parks, connectivity, and public spaces.

VIA TRANSIT ORIENTED DEVELOPMENT UDC AMENDMENTS

Client: VIA Metropolitan
Location: San Antonio, TX
Year: Ongoing

The VIA Transit-Oriented Development UDC Amendment Engagement Plan is a comprehensive project to improve urban development and transit in San Antonio.

Mario Peña and Able City led the project, which involved a series of focus group meetings, one-on-one stakeholder meetings, and community outreach events. The focus groups included the Real Estate Council of San Antonio (RECSA), ULI and Centro San Antonio, Neighborhood Associations, and Mobility Advocacy groups such as ActivateSA, VIA Community Council, and San Antonio Mobility Coalition.

One-on-one stakeholder meetings were held with developers, city leadership, and City Council Members. The project also included pop-ups and general community outreach events. The team joined an event that VIA planned or participated in, geared toward youth and college students. The couple shared amendments and visualizations at these events and asked attendees for feedback and comments.

BIOGRAPHY
Mr. Solis is a registered Architect with over 19 years of experience in the areas of building technology, architectural design, code compliance, and sustainability. As our Production Lead, he has established a high level of quality for the documentation of our commercial facilities, public/private buildings, apartment complexes, and residential homes. Services performed throughout a 19 year career have included engagement for the performance of complete architectural services including custom design, detailed drawings and specifications of all architectural, structural, mechanical and electrical components; submitting projects for competitive bids and evaluation of competitive bids; on-going inspection of the progress of work and certification to the owner of the satisfactory completion of phases of the work. He has extensive knowledge of and experience in application of ADA requirements, building codes and code compliance issues across a multitude of project types. Mr. Solis is also a registered LEED Accredited Professional and Certified Plans Examiner.

BIOGRAPHY

Mario A. Peña is a certified planner AICP and registered Architect in the state of Texas and Florida with over 20 years of experience, 12 of which have been as principal of a design firm. Mario has focused on creating and leading teams of professionals with a passion for design, sensibility for creative problem solving, and unwavering customer service. He has continued to enhance his professional skills broadening his expertise in the areas of retail development and urban planning. With a keen interest in urbanism and smart-growth, Mario understands the need to create urbanism that has an appropriate density that is connected and that contributes to the quality of our places. He is particularly passionate about place-making, and promoting codes and policies that enable places designed for people to thrive and that will stand the test of time.

BIOGRAPHY
Jason King serves as Principal and Partner at Able City East. He has directed multidisciplinary teams around the country and has served as the project director and prime author on over 200 plans for cities, towns, neighborhoods, and corridors. He has led several virtual charrettes across the U.S. since the appearance of COVID and the first virtual charrette in Missoula, Montana in March of 2020 according to the National Charrette Institute. From the first plan he worked on for the Tarautao Islands of Thailand, to the multiple plans he authored in Coastal Louisiana, Southeast Florida, and the American Southwest, Jason's work has focused on social, economic, and climate change resilience. Jason authored the book: The Climate Planner: Overcoming Pushback Against Local Mitigation and Adaptation Plans (Routledge 2021). Jason's work is featured in numerous planning texts such as Sustainable Urbanism (2007), Form-Based Codes (2008), and Street Design (2014) and he has been interviewed by the New York Times, Planning Magazine, and National Public Radio.

SELECTED WORK
Missoula Downtown Master Plan, Missoula, Montana, 2019-2020: Jason led the Master Plan Update, which serves as a guide for decisions over the next 10 years impacting Missoula's historic downtown and adjoining neighborhoods, including modifications to land use and planning regulations, public and private investment decisions, and prioritization for allocation of municipal and community resources. Jason was project manager for the project.

Wheeler District, Oklahoma City, Oklahoma, 2014: Jason was the lead designer for the Wheeler District in Oklahoma City, a new neighborhood on the south side of the Oklahoma River, initiated with a public charrette and various events like a Ferris Wheel and concerts, aiming to become the region's most bikeable community.

SEVEN50, The Prosperity Plan for Southeast Florida, 2012-2016: Jason King led a fifteen-firm consultant team and authorized the SEVEN50 Prosperity Report. This fifty-year plan serves seven counties in Southwest Florida, involving over six million people across 121 municipalities. The planning process engaged thousands through summits, workshops, and interactive websites. The project, funded by the US Office of Sustainability Housing and communities, was featured on NPR and in The New York Times.

El Paso Comprehensive Plan, El Paso, Texas, 2010-2012: Jason led the Plan El Paso initiative, involving multiple charrettes with a multidisciplinary team, residents, stakeholders, and officials to create and implement the city's main policy document, covering capital projects, land development, TOD development, and form-based coding.

BIOGRAPHY
Teresa Barker is a registered Architect in the State of Texas. She attended the University of Texas of San Antonio for her undergraduate and graduate degrees. While studying for her undergraduate degree Teresa had the opportunity to study abroad in Urbino, Italy for a semester. Her experience in Italy surrounded by historic architecture and learning about the importance of preserving the historic fabric led her to pursue a certificate in historic preservation as a graduate student.

She lived in San Antonio for over 11 years and in 2020 returned to Laredo, TX and is currently on the City of Laredo Landmark Board. She hopes to apply what she has learned, and will continue to learn, to enhance her hometown and improve quality of life through architecture. Teresa is a LEED Green Associate and a WELL Accredited Professional.

THE CITY OF Edinburg

STATEMENT OF QUALIFICATIONS FOR ARCHITECTURAL SERVICES ROTATION

RFQ No. 2024-8

ALVARADO ARCHITECTS & ASSOCIATES, INC.

COVER LETTER

Section 01 - Introduction

July 16, 2024

Ms. Clarice Yvette Balderas, City Secretary
City Secretary Department (1st Floor)
City of Edinburg
415 W. University Drive
Edinburg, Texas 78541

RE: RFQ# 2024-8 Architectural Services Rotation

Dear Ms. Balderas:

Alvarado Architects & Associates, Inc. is pleased to submit our qualifications for Architectural Services to the City of Edinburg. After carefully evaluating your request, we have assembled this enclosed response.

With over 30 years of experience in serving the Rio Grande Valley, Alvarado Architects & Associates, Inc. is thoroughly familiar with renovations and new construction of public/municipal facilities. Our experienced team is committed to provide you with the most creative and innovative designs required to facilitate your needs. Our commitment to you will be to take the utmost care of detail in design while being fiscally responsible and our service will be unparalleled to anyone else. Alvarado Architects & Associates, Inc. is ready and willing to assist your needs in any way possible.

The team for the City of Edinburg project will be as follows: Mr. Erasmo “Ed” Alvarado Jr., AIA, President will be leading the design team; Mr. Eli Alvarado, Vice President will be responsible for contract administration, client relations and the point of contact for the city; Mr. Mario Garza Jr. will be project manager.

*We acknowledge that no addenda have been issued.

Again, Alvarado Architects & Associates, Inc. appreciates the opportunity in allowing us to submit our qualifications to you. Thank you for your consideration. We look forward to further presenting our qualifications and experiencing a successful working relationship together. Should you have any further questions, please do not hesitate to contact us at 956-464-8258.

Sincerely,
Alvarado Architects & Associates, Inc.

Erasmo 'Ed' Alvarado, Jr. AIA
President

Erasmo 'Eli' Alvarado, III
Vice President

H. HISTORY:

Alvarado Architects & Associates, Inc. was founded in 1991 by Erasmo “Ed” Alvarado, Jr. , President, AIA. After graduating from Texas A&M University Mr. Alvarado, a Rio Grande Valley native, returned home where he served as the lead designer for several local architectural firms. After persevering through the Architectural Depressions of the 1980’s, Erasmo Alvarado, Jr. decided it was time to open up his own firm. Mr. Alvarado set up shop in his hometown of Donna, Texas.

Now, with over 30+ years experience dedicated to educational facility planning and design, Alvarado Architects & Associates, Inc. continues to deliver quality projects with an emphasis on customer service. In 2016 Erasmo Eli Alvarado, III joined Alvarado Architects & Associates, Inc., and as Vice-President he is dedicated to maintaining the customer service culture and work ethic established by

his father. Erasmo “Ed” Alvarado, Jr. and Erasmo Eli Alvarado, III are committed to their involvement on each and every project undertaken by the firm.

I. ABILITY TO PERFORM SERVICES:

Alvarado Architects & Associates, Inc. team is uniquely qualified to serve as the architect on your next project. We are commited to establishing a long term partnership. The team we have proposed was carefully assembled in order to not only bring you the best professional talent and a team that is deeply rooted in the Rio Grande Valley community, but also and even more importantly, has the relevant knowledge to deliver a successful project. Our team members have prior experience working in South Texas and know all the opportunities and challenges of designing and building a project in this region. Alvarado Architects & Associates, Inc. selected each of the design consultants based on their relevant experience, local offices in South Texas. Our team is well-suited to provide the best design possible in meeting the needs and requirements of the renovated buildings.

Alvarado Architects & Associates, Inc. strives to deliver the most efficient, functional and well-designed facilities that are within budget and on schedule. Our firm offers a design team that brings together multiple services within a single source. This allows an increased flexibility to react quickly to a variety of options and considerations. The following are services offered by our team, but are not limited to:

- Code Compliance
- Architectural Planning & Design
- Design/Build Delivery Method
- Construction Management
- Fast Track Construction
- Construction Administration
- Master Planning
- Computer Aided Design (CAD)
- Interior Design

No matter whether the design requires a new facility, a renovation, or an addition to an existing facility, our firm ensures that the highest level quality of service to its clients remains the same. Our goal is not only to meet your expectations but to exceed them.

FIRM HIGHLIGHTS

HUB Certified
Alvarado Architects & Associates, Inc. is a minority-owned business and has obtained HUB certification.

Commitment of Principals and Senior Level Personnel
Our Team is committing senior level, highly experienced personnel to the client's project. Alvarado Architects & Associates, Inc. is a hands-on firm and one of our Principals will be involved in all phases of the projects.

Local Construction Industry Experience
Our team has worked extensively in the South Texas region. With over 30+ years serving the Rio Grande Valley we are familiar and have knowledge of the local construction practices, procedures, regulations, soil and environmental conditions.

Local Office
Alvarado Architects & Associates, Inc. has a dedicated office located in Donna, Texas which is only 20 minutes from Edinburg. We can meet on a moments notice.

J. FIRM'S PHILOSOPHY:

Alvarado Architects & Associates, Inc., feel that the sole reason for our continued growth and success, can be summed up in three words: unparalleled customer service. Every aspect of our firm, from selection of personnel to design methods to construction services, has been strategically planned to respond to the specific needs of our clients. Our Firm will assist our clients in having the most efficient, functional and well-designed facilities within budget and time. No matter whether a design requires a new facility, a renovation, or an addition to an existing facility, our firm ensures that the high level of quality service to its clients remains the same. Our Firm provides multiple services with a single source of project leadership to ensure that responsibility is firmly established. This allows increased flexibility in react efficiently to a variety of options and considerations. Our goal is not only to meet your expectations, but to exceed them.

K. AVAILABILITY AND COMMITMENT

The Alvarado Architects & Assoicates, Inc. team is ready to begin work on your project immediately and ready to provide the proposed staff within this submittal and any other resources necessary to perform architectural services for this project. If awarded this assignment, the Alvarado Architects & Associates Inc. team commits to providing you with all the assistance you require. We have the capacity to provide you dedicated resources and the capability to provide additional specialty services if needed. We have the full range of experts that can help solve any challenge you may have.

WHAT SETS US APART

Alvarado Architects & Associates, Inc. has over 30 years of experience working on publicly funded institutions. We understand that we must perform well in order for our client to maintain its good standing in the community – to be able to return to the public for a positive vote in the future. This can only be accomplished when the voting public realizes that the value of their tax dollar has been respected. Having extensive experience in this environment, we know and understand, and can properly plan and schedule for City Staff Meetings, Council, Zoning, and other official meetings requiring prior public notice. We have ample respect and appreciation for the contribution of public servants wherein their available time is limited. Consequently, we must be prepared to fully illustrate with graphics, documents, schedules, and any other information that might enable our client to confidently make informed decisions without delay.

TEAM'S WORKING RELATIONSHIP

Alvarado Architects & Associates, Inc. is proud to propose the enclosed architectural team and engineering consultants. The consultants were selected based on previous projects, coordination proceedures and proximity to our office. Having a past working relationship allows us to listen and follow through in a quick and efficient manner with the Owners' questions and concerns.

The team we have assembled for your project provides all management, architectural planning, design and documentation to be delivered directly by Alvarado Architects & Associates, Inc.

PROJECT BUDGET CONSIDERATIONS

With over 30+ years in serving the Rio Grande Valley, Alvarado Architects & Associates, Inc. has created a database of construction costs for all of our projects. We begin in assisting the Owner at the beginning of each project in establishing a preliminary construction cost estimate for each project. During Design, we remain fiscally responsible in designing efficient building facilities while using low maintenance cost materials throughout the project. By incorporating Alternates, Allowances, and/or Contingencies, the Owner has the authority to pick and choose which items are to be included in the project. Once the project goes out for proposals, Alvarado Architects & Associates, Inc. will assist the General Contractor and ensure the project is within budget. During Construction, all contingencies will be carefully reviewed by Alvarado Architects & Associates, Inc. and no authorizations will be made unless approved in writing by the Owner.

DESIGN STANDARDS

Our team will first review and analyze the current City of Edinburg standards and will hold a focus meeting with Weslaco leadership to confirm the intent and direction of the standards. We will then identify any and all aspects of the standards that may have impact or influence on the scope of the project at hand. The project will develop within the design phases which will confirm Alvarado Architects & Associates, Inc.'s compliance with City's facility standards. A process of checks and balances in the design process will ensure the City's satisfaction with the project's relationship to established standards.

VALUE ENGINEERING

Alvarado Architects & Associates, Inc. works aggressively early on in the project to collaborate with the client's representative to provide pre-construction services such as scheduling, budget and constructability reviews. When the bids are over budget it is our utmost priority to make the project a reality. Once the contractor is under contract our team will work hand-in-hand to review project systems, material selections and site work to ensure the Owner is getting the best possible value.

QUALITY ASSURANCE/QUALITY CONTROL

From the very beginning of a project, our team strives to maintain design integrity and quality by working with the Owner to explore, define and document a concrete set of project goals that will be incorporated into the final solution. Our quality control program offers a comprehensive, multi-level system of checks and balances.

First and foremost, we understand the importance of assigning one single source of accountability that the Owner can depend on every time they pick up the phone and then having that representative act as the

daily liaison between all levels of project management - from project designers to construction phase field representatives.

In order to strive for error-free plans and specifications during the construction document phase, we initiate multilevel quality control program from the very beginning. Weekly coordination meetings with the architectural, mechanical, electrical, plumbing, structural and civil engineering teams will be held to discuss existing and potential problems and to find an immediate resolution for each. The bottom line is that quality assurance starts on the first day of work and is a continuous process through project completion.

QUALITY CONTROL DEPARTMENT

Alvarado Architects & Associates, Inc. is committed to providing quality support and training to our Staff through a responsive, systematic and consistent approach of compiling data, delivering valuable relevant information and providing timely quality project control reviews. We maintain a checklist of items to review, keep up with the latest construction methodologies and products and ensures our drawings meet the highest standards of quality. Alvarado Architects & Associates, Inc. have established a protocol for project quality review by senior staff at pertinent points during the project design and production phases in order to assess, direct and support project management of the project.

QUALITY CONTROL MAINTENANCE

Alvarado Architects & Associates, Inc. has also developed a comprehensive internal "checklist" that is addressed throughout the entire project to ensure items are not left off the drawings. Our architects will constantly review this checklist and cross-reference the construction documents for accuracy. In addition, every set of drawings generated at Alvarado Architects & Associates, Inc. is checked for final approval. The project schedule is also arranged so that a 10-day "proofing" period is allotted prior to releasing for bidding to allow for further coordination and evaluation of the drawings and specifications to ensure correctness.

TECHNICAL COMPETENCE

The team we've assembled is very qualified to address projects much like the one proposed. Alvarado Architects & Associates, Inc., especially, has specialized in this type of work for more than 30 years. Our proposed team is dedicated exclusively to pre-planning, programming, design and construction administration of similar event and institutional facilities. We pride ourselves on being leaders in our field and it is due to our experience that clients continue to come back to us time and time again to complete their projects.

COST ESTIMATING

Our team utilizes innovative methodologies when it comes to cost estimating. We maintain a comprehensive database of construction costs in the South Texas area. This allows us to better understand the "current state of the market" for southern Texas. With the aid of the latest computer software and up-to-date cost factors, our staff of professionals can deliver the detailed estimates required for building projects.

Together, our team will consistently meet client cost estimating objectives by:

- Joining with our clients to define and coordinate the project specifications, budget and schedule. Each must work in terms of the other and everyone involved must have a common understanding of the objectives.
- Designing an efficient plan – the ratio of gross to floor area must be low. Dollars spent on inefficient spaces and circulation do not contribute to the functional program.
- Selecting cost-effective materials and details – materials and details impact both initial and longer maintenance costs. These must be balanced against the funds available and conditions in the current construction market.
- Selecting cost-effective building systems (structural, MEP) – the most effective systems for a building may vary from year to year and region to region depending on conditions in the local market. The client and design team should explore a host of potential system options before fixing these important elements of the project.

- Writing specifications – having defined precisely the requirements to be met, specifications should afford bidders as much flexibility as practicability to offer high quality at the lowest cost.
- Bidding procedures – to provide flexibility, we often include a number of alternates in bid documents which affords clients the opportunity to adjust both scope and cost after bids are received.

DELOPING AND MAINTAINING WORK SCHEDULES

Our proposed team's standard procedures require all project managers to develop a work schedule at the startup of every project to match or beat the Owner's schedule. This schedule is regularly reviewed by both the Production Staff Manager and Design Studio Manager to ensure project staff will be appropriately sized and scheduled as work commences. Earmarking staff and assigning them as early as possible in the process ensures the controlled and reliable production of the quality work.

TIMELY COMPLETION

Alvarado Architects & Associates, Inc. has implemented step-by-step procedures to ensure a project stays on schedule. At the beginning of every project a Schedule of Services is generated to ensure all phases of the project are being met according to the contract. The Schedule of Services is generated directly with the Owner to ensure responsibilities of each party are also implemented in the schedule. Dates such as Facilities Meetings, Board Meetings, or any required presentations are incorporated for all necessary approvals.

Alvarado Architects & Associates, Inc. will work closely with the Owner to ensure project meeting timelines are met. We would recommend meeting on a weekly basis until the Program, Budget, and Schedule are satisfactory to the Owner. Then we will work towards the design of the project by implementing any of the Owner's Standards or Design Criteria. Once in the Construction Documents Phase, we will schedule meetings with the Owner until we receive a 100% review of the plans. During Construction, we will meet on site with the General Contractor on a weekly basis for the duration of the construction of the project.

Alvarado Architects & Associates, Inc. will supplement production capability to meet schedule demands, if and when necessary.

Section 03 - Resumes

Alvarado Architects & Associates, Inc. are committed to the City of Edinburg. Our team has sufficient staff and resources to meet the needs of the city and deliver projects on your schedule. We are committed to providing exemplary service throughout the duration of any project that may result. The percent of time that individuals will be involved with the project will of course depend on what the project turns out to be, and what the City's scheduling needs turn out to be.

The Alvarado Architects & Associates, Inc. team, led by the following qualified professionals, have all made a commitment to the City:

Erasmo 'Ed' Alvarado, Jr., AIA - President/C.E.O., responsible for contract negotiations and will oversee entire project. Erasmo is an experienced architect, who also has a lengthy track record working in the Rio Grande Valley area. Erasmo's involvement with the project might be 100% depending on project size, and will be throughout all project phases.

Eli Alvarado - Vice President, immediate availability and on-site decision making. Eli has run an architectural office for many years in the Rio Grande Valley, and is familiar with local conditions, consultants and contractors. Eli's involvement will be 100% and consist of day-to-day operations from design through construction & warranty phase.

Pedro Ayala - Project Manager, responsible for planning schedule and organizing resources to meet overall project budget, schedule, and Client requirements. Pedro has extensive management experience with projects of every size, and maintains a frequent presence in the South Texas area. Pedro's involvement might amount to 50%, throughout all phases but particularly in design phase.

Mario Garza Jr. - Construction Administration, responsible for site observation. Mario has experience working on projects from small scale single buildings to large campuses. Mario's involvement will begin in the early stages of design to 100% during construction.

Please see key personnel's resumes on the following pages.

ERASMO D. ALVARADO, JR., AIA

President/Architect

Mr. Alvarado offers extensive experience in educational, institutional and public facilities as well as medical, office, commercial and golf course design. His 38-year career has taken him to work for the ruler of dubai, united arab emerits, to operating his own office in the rio grande valley. As architect of record for Alvarado Architects & Associates, Inc., Mr. Alvarado is involved in design development, construction documents, quality control and quality assurance, contract management and negotiations, as well as the day-to-day operations of the company.

PEDRO G. AYALA, ASSOC. AIA

Associate

Pedro has more than 25 years of experience in providing architectural planning, design/build, development and construction services. He is responsible for urban planning strategies, historic preservation, sustainable development, placemaking, complete streets and managing various architectural services while coordinating all phases of project development. He's been a partner with Erasmo Ed Alvarado since 2006. Pedro is vastly familiar with urban design strategies that improve economic development and downtown revitalization policies. He brings a unique vision to all the stakeholders and introduces sustainable solutions to every project as a hallmark of his philosophy.

MARIO GARZA JR.

Project Manager/Construction Administration/Designer

Mr. Garza is a designer and detailer with more than 20 years of experience developing various project types, from residential to large scale municipal, public, religious, and private facilities. As a job captain and project manager on many projects, Mr. Garza gained the experience to execute a project from initial conception to the completion of the building. He leads the project team by developing the design to meet construction/budgetary requirements and coordinating with the various job sub-consultants, to executing the construction documents. His experience includes pre-design services, schematic design, design development, construction documents, construction administration, 3D computer generated and hand renderings; conceptual visualizations.

CHANIN

Key Personnel

MIGUEL CHANIN, PE | Principal-In-Charge

Miguel Chanin is a professional engineer in the state of Texas with over 19 years of structural design experience in various private and public projects. Mr. Chanin is the founding member of Chanin Engineering, LLC and has led the firm since its inception in 2006. Chanin Engineering projects begin with Mr. Chanin acting as the prime point of contact to assess and authorize project contracts and scope of work. He is fully responsible for interpreting, delegating, and coordinating all engineering projects. Additionally, Mr. Chanin reviews plans and technical specifications, as well as prepares contract documents and estimates. He supervises the design and ongoing progress of each project, including coordination with the Client/Owner and any other subconsultants or regulatory agencies. He also provides operational supervision and technical guidance.

Education

University of Texas at Austin
Bachelor of Science in Civil Engineering
1999

Registrations

Licensed Texas Professional Engineer - #93127

Texas Department of Insurance Appointed Qualified Inspector

Relevant Project Experience

North Side Fire Station, Weslaco, Texas
The project consisted of the construction of a new pre-engineered metal building with a five bay apparatus garage as well as living and office accommodations. The pre-engineered building includes a metal roof, masonry/metal veneer, and a concrete slab-on-grade. The fire station will consist of approximately 10,000 SF. The "house" of the station is approximately 4,000 SF and will consist of a lobby, reception area, day room with kitchen, offices, sleeping quarters, restrooms, and support spaces for the fire fighters. This project is currently in the construction phase.

City of Edinburg Wastewater Treatment Plant Office, Edinburg, Texas
Responsibilities included structural engineering oversight for the estimated $350,000, 1,800 SF facility — an Operations Office Building for the City of Edinburg Wastewater Treatment Plant. The new facility includes a breakroom, inventory room, lab, office, and work area. Structurally, the building features a slab-on-grade foundation, exterior load-bearing CMU walls, steel columns for interior support conditions, and a conventional metal roof framing system. This project is currently in the construction phase.

City of McAllen Transit Facility, McAllen, Texas
The City of McAllen Transit Facility & Bus Canopy project is located within a master planned 16-acre city development. The Transit project includes a 5,000 SF Administration building, a 2,100 SF Storage Building, and 3 Bus Maintenance Bays. Structurally, the project consists of pre-engineered metal buildings with Novidesa insulated wall systems as the primary wall framing system within the pre-engineered frame. The architectural bus canopies are comprised of structural streel members. This project is currently in the Construction Document Phase.

Other Key Projects:
- Hidalgo County Adult Detention and Law Enforcement Center Facility Repairs and/or Replacement, Edinburg, Texas
- City of San Juan Public Safety Building, San Juan, Texas
- City of Mission Fire Department Substation & Police Substation, Mission, Texas
- Hidalgo County Precinct 1 New Tax Office
- City of McAllen Development Center Renovation, McAllen, Texas
- Rio Grande City Solid Waste Transfer Station, Rio Grande City, Texas

VME ENGINEERING

VME Personnel

Fernando Gallegos, P.E.
Position: President
Experience: 11 Years
Education: Bachelor of Science - Mechanical Engineering, University of Texas Pan American. 2004
Licenses: Licensed Professional Engineer, Texas License No. 109882

Areas of Experience.

- Project management
- Construction Administration
- Mechanical HVAC Design
- Plumbing Design
- BIM Design.

Experience Summary

Mr. Fernando Gallegos is the President of VME Engineering LLC. in Donna Texas. Prior to starting VME Mr. Gallegos was a Mechanical Designer for Trinity MEP Engineering, and DBR Engineering Inc.

Mr. Gallegos has 11 years of experience in the HVAC discipline. He begin his experience doing test and balance of HVAC systems. There he was introduced to the all sorts of troubles encountered in the engineering designs. That experience helped him to understand the HVAC systems and design flaws. From test and balance he started working with DBR as a construction administrator. During this period Mr. Gallegos attended the job site to verify the installation of the MEP systems. He attended meetings with owners and contractors to solve any issues that arose. This experience also helped him do better designs. After construction administration Mr. Gallegos started his HVAC design career. He designed for three and a half years while at DBR. He soon got his license in 2011 and opened his own firm to provide clients the best designs and customer satisfaction.

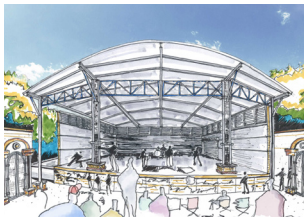
Mr. Reyna has 10 years of experience in the field of civil engineering. He has completed a wide range of projects for both public agencies and private developers. He has participated in a variety of development types, including mixed-use developments; healthcare facilities; municipal utilities; schools and universities; shopping centers; offices; industrial facilities; residential and multi-family developments; and state and local governmental agencies.

He has extensive experience in site civil design, including building, facility, and utility layout; site grading and earthwork; and design of paving, drainage, and utility improvements. Other areas of expertise include hydraulic and hydrologic analysis for open and closed storm drainage systems and floodplain reclamation studies; water distribution and wastewater collection systems.

Mr. Reyna's engineering experience has been with various municipalities including the City of Mission, City of Edinburg, City of McAllen, City of Pharr where he was part of a design teams preparing plans and specifications for water, sewer, paving and drainage improvement projects. His experience has also been working with Edinburg CISD, PSJA ISD, South Texas College, UTRGV, La Joya ISD, Harlingen ISD, and Santa Maria ISD where he has been part of teams preparing construction drawings and contract documents for various paving, drainage, watrer, sewer, irrigation, parking, and sidewalk improvement projects. Some of these projects include site development project for a new FEMA Shelter Dome within the La Joya ISD property and infrastructure utilities for portable buildings at the Pecan Campus for South Texas College This is a small list of project .

As a project engineer, Mr. Reyna has always responded to the needs of every client and has function as an extension of their staff to exceed their performance objectives and respond to their needs on short notices.



Project Experience:
1. PSJA ISD Memorial High School Early College Drainage Improvements
2. PSJA ISD Collegiate College Overall Campus Drainage Improvements
3. PSJA ISD Football Stadium Turf Improvement Project
4. PSJA ISD Kennedy Middle School Athletic Fields Water, Sewer and Drainage Improvements
5. Harlingen ISD High School Football Fields Turf Replacement and Drainage Improvements
6. Santa Maria ISD Agriculture Barn Paving, Drainage, Water and Sewer Improvements
7. PSJA ISD Agriculture Barn Paving, Drainage, Water and Sewer Improvements
8. La Joya ISD Auditorium Subdivision Platting and Drainage Improvements

LITIGATION SUMMARY

Alvarado Architects and Associates, Inc. has no claims or litigation including arbitration involving the firm in the last five (5) years. Our organization has completed all awarded work.

REQUIRED FORMS

Section 08

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☑ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

_____
_____
_____

SENATE BILL 19 VERIFICATION

I, Erasmo Eli Alvarado III, the undersigned representative of

Alvarado Architects & Asssociates, Inc., (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

Alvarado Architects & Associates, Inc.

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

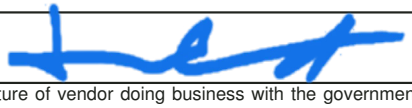
N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No N/A



B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No N/A

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

N/A

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1). N/A

re: **Statement of Qualifications**
2024-8 Architectural Services Rotation

Thank you for the opportunity of presenting our firm to your organization in regard to providing ARCHITECTURAL SERVICES for your upcoming projects.

I have had an architectural practice in McAllen for 50 years, the last 34 under the present organization. We have provided architectural services for well over 600 projects, many of them having components similar to your needs. We are a small firm by choice and are selective in the projects that we pursue which means that your project will be a priority in our schedule. Our goal is not to amass a long list of buildings, but more importantly a long list of satisfied clients. We also take pride in working on projects that are “people” oriented that adds to our communities “quality of life”.

In short, we would consider it a privilege to work with you on your projects and believe that our experience and interest will help ensure the first class facilities that you will be proud to administer. Our firm is available and ready to start. Our assembled team of professionals have provided their services to our firm in serving many of our past and current clients.

No addendums pertaining to this RFQ have been received by our firm. I am available to provide further clarification if desired and will be the one to conduct final contract negotiations on behalf of our company.

Sincerely,

Danny Boultinghouse, AIA | president

TYPE OF ORGANIZATION: Corporation

YEARS IN BUSINESS: 34

HISTORY:

The firm of Boultinghouse Simpson Gates Architects is a professional organization comprised of a core group of registered Architects, along with the technical and clerical support required to meet the demands of each project. The firm, under its present organization, is entering its thirty-third year and with the experience of its two principals span over forty years of providing architectural services to over 600 successful projects.

Its present makeup is the result of merging two independent successful architectural practices in 1990. Mr. Boultinghouse brought to that merger eleven years of corporate firm experience and seven years of private practice. Mr. Simpson's experience included fifteen years of practice including construction experience and private practice. The two firms merged to offer a broader, more comprehensive choice in providing architectural services while still retaining a personal touch. The success of that merger and that philosophy has resulted in a controlled growth of a staff of four to its current size of eleven and has allowed us to name John Gates, AIA NCARB as a principal in the firm. 600 successful projects and an 85% repeat client rate is a testament to that success.

We believe that our success revolves around the philosophy that we are "client" oriented as much as "project" oriented. We feel our clients deserve the attention of the key members of the firm and believe that the client is an essential part of the team. ***"We do not do projects for clients . . . but rather with them."*** The needs and goals of the client should determine the direction of the building project, not the Architect. Our goal is not to just amass a long list of buildings, but more importantly a long list of ***satisfied*** clients.

AWARDS:

2023 AIA Lower Rio Grande Valley SPARK - Freedom Bank
2019 Architectural Firm of the Year - AGC Rio Grande Valley Chapter
2018 McAllen Top 5 Small Business - McAllen Chamber of Commerce

COMMITMENT:

We build our strength and reputation on providing a personal service. The Project Architect along with Project Manager will begin and stay with the project until it is completed. They are available and will be committed to your work.

Assuring our ability to meet project milestones and schedules is a daily requirement in any service type profession. Our reputation and track record are on the line with every project, and we can meet your schedule demands as we have done on our many projects. Over 85% of our clients are repeat clients and that along with 40 plus years of successful practice is a true measure of meeting project milestones and schedules.

MANAGING WORKLOAD:

Our firm is selective in the projects that we pursue which gives us the opportunity to manage our schedules efficiently. Our goal is not to see how many projects we can produce. Much of our success has been due to controlling and balancing that workload to keep project's delivery on-time and in budget.

We try to control our workload such that we have never had the need to add staff solely to meet the demands of any project. We believe that we can be more efficient without "breaking-in" a new employee on a project.

● FIRM'S UNIQUENESS:

PAST EXPERIENCE Our recent experience with providing "on-call" Architectural services over a 5 or 8 year period for the University of Texas Rio Grande Valley, we believe, gives us the background to meet your needs for this type of service. We are currently providing those same type services for South Texas College.

LOCAL MATTERS Our office location on the north side of McAllen is just minutes away from downtown Edinburg which also make us unique and readily available. This is our area, not another page on our website. Unlike firms from Austin, Dallas or Houston, we have a local pride that cannot be matched. As a firm, we enjoy working locally. Your project(s) won't be just another project to us. It's our community! We will be "on-call" and will respond in a timely manner to any job site situation or concern that would require a site visit. Our firm's site inspections are performed by the Project Manager and/or Project Architect.

ACCOUNTABILITY We are unique in that we have three registered Architects on staff and typically assign two to each project regardless of the size of project. Being just miles away, makes us instantly available for questions and opens communication to help us see small issues before they become "problems."

SMALLER PROJECTS Although we handle larger projects, as evidenced by the recently completed national award winning $14 million McAllen Public Library, the bulk of our practice revolves around smaller projects - that is our "market niche." Smaller projects allows our staff to work on several different types of projects at one time, which makes the day more interesting and challenging.

AWARDED PROJECTS

McAllen Public Library

- AIA Honor Award for Interior Architecture
- AIA Minnesota Honor Award • LRGV-AIA Honor Award
- ALA/IIDA Library Interior Design Award

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☑ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

LITIGATION DISCLOSURE FORM

Failure to fully and truthfully disclose the information required by this Litigation Disclosure form may result in the disqualification of your submittal from consideration or termination of the contract, once awarded.

1. Have you or any member of your Firm or Team to be assigned to this engagement ever been indicted or convicted of a felony or misdemeanor greater than a Class C in the last five (5) years?

   Circle One YES (NO)

   1 Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

   Circle One YES (NO)

3. Have you or any member of your Firm or Team to be assigned to this engagement ever been involved in any claim or litigation with the CITY or any other Federal, State or Local Government, or Private Entity during the last ten (10) years?

   Circle One YES (NO)

If you have answered "Yes" to any of the above questions, please indicate the name(s) of the person(s), the nature, and the status and/or outcome of the information, indictment, conviction, termination, claim or litigation, as applicable. Any such information should be provided on a separate page, attached to this form and submitted with your submittal.

HOUSE BILL 89 VERIFICATION

I, Danny Boultinghouse, AIA, the undersigned representative of Boultinghouse Simpson Gates Architects, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2270:**

1. Does not boycott Israel currently; and

2. Will not boycott Israel during the term of the contract.

3) Is not currently listed on the State of Texas Comptroller's Companies that Boycott Israel List located at https://comptroller.texas.gov/purchasing/publications/divestment.php

Pursuant to Section 2270.001, Texas Government Code:

1. "Boycott Israel" means refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations specifically with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes; and

2. "Company" means a for-profit sole proprietorship, organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or any limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company or affiliate of those entities or business associations that exist to make a profit.

SENATE BILL 13 VERIFICATION

I, Danny Boultinghouse, AIA, the undersigned representative of Boultinghouse Simpson Gates Architects, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Chapter 809, Government Code 2274:**

1) **does not boycott energy companies and;**

2) **will not boycott energy companies during the term of the contract.**

Pursuant to Section 2274.001, Texas Government Code:

1. "Boycott energy company" has the meaning assigned by Section 809.001; and

2. "Company" has the meaning assigned by Section 809.001, except that the term does not include a sole proprietorship.

SENATE BILL 19 VERIFICATION

I, Danny Boultinghouse, AIA, the undersigned representative of Boultinghouse Simpson Gates Architects, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

RE: REQUEST FOR QUALIFICATIONS FOR ARCHITECTURAL SERVICES ROTATION; RFQ NO. 2024-8

BRW Architects has designed hundreds of municipal facilities across Texas over our 40-year history. We have completed over 100 Needs Assessments and Facilities Master Plans for cities, counties, schools, and universities, often leading to project implementations. All Planning Studies should define a strong vision for responsible decision-making and financial planning for current and future operational needs. Our BRW team has decades of experience assisting municipalities all across Texas to plan and implement their construction projects. From single facilities to city-wide needs, our proven process ensures success for the City of Edinburg.

Successful History with On-Call Contracts

In the last 10 years, BRW has successfully delivered over 740 projects through On-Call, IDIQ, and JOC contracts. We currently hold ongoing IDIQ contracts with over 10 entities, including municipalities, colleges, and universities. We understand the diversity and challenges of being the "on-call architect." Maintenance-driven and based on critical needs, these projects often have short-term efforts and schedules.

BRW understands our clients' immediate needs and potential problems. We approach each task with aesthetic sensitivity, technical know-how, and value provision. Our experienced team can respond to your needs and manage diverse assignments while adhering to schedules, budgets, and goals.

Consistent Team Members

The team we propose will be with you from start to finish. We carefully select engineering and specialty consultants as they are vital to realizing your project vision and implementing your long-term plan. This team, having collaborated on multiple projects for years, is well-suited to determine the best use of systems, resources, and assembled.

Integrated Design Solutions

Our philosophy centers on design excellence in every building aspect—its campus fit, function, user relationship, systems, and cost. Our integrated and collaborative approach addresses all project challenges. We consider aesthetics, constructibility, material selection, scheduling, construction phasing, sustainability, systems integration, codes, function, user desires, budget, existing conditions, renovations, and design aspirations.

Project Leadership You Can Trust

BRW's culture and business philosophy are grounded in open communication, strong leadership, and exceptional client service. We are **FOCUSED** ON WHAT **MATTERS**® to you and are motivated to earn your respect daily. We are committed to collaboration, consensus-building, and exceeding your expectations. Our commitment is to provide high-quality design services through listening, collaborative problem-solving, and excellent communication.

Thank you for your consideration. We acknowledge no addenda were released for this RFQ. We look forward to meeting the needs of the City of Edinburg for many years!

Firm Qualification and Experience

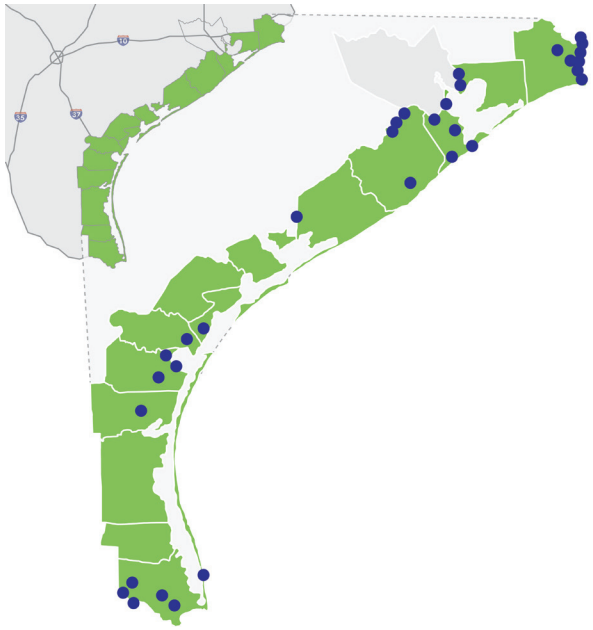
GOVERNMENT AGENCY EXPERIENCE

BRW has successfully partnered with various municipal entities, demonstrating our proficiency in delivering tailored architectural solutions for a diverse range of public facilities. Since our inception in 1984, BRW has been boldly and comprehensively shaping the architectural landscape throughout Texas, leaving an indelible mark on the built environment. We have completed a variety of project types and municipalities, as well as projects for USPS, K12, and university campuses. Project types include the following:

- City / Town Hall
- Courts
- Dispatch / 911 Call Centers
- Government Center / Tax Office
- Emergency Operations Centers
- Fire Administration
- Fire Stations
- Firing Range
- Fleet Maintenance
- Libraries
- Maintenance Facilities
- Memorial Gardens
- Municipal Centers
- Nature Centers
- Parks Facilities
- Performing Arts
- Police Stations
- Police Property and Evidence
- Public Works
- Recreation and Aquatics
- Senior / Active Adult Centers
- Sports Facilities
- Training Facilities
- Visitor Centers
- Other Unique projects

BRW Architects has had the honor of working with over 160 communities across the State of Texas. Some of our clients include:

- City of Baytown
- City of Beaumont
- City of Brazoria
- City of Bridge City
- City of Brownsville
- City of Corpus Christi
- City of Clute
- City of Dallas
- City of DeSoto
- City of Edinburg
- Town of Fulton
- City of Galveston
- City of Garland
- City of Grand Prairie
- City of Gregory
- City of Groves
- City of Harlingen
- City of La Porte
- City of League City
- City of Los Fresnos
- City of McAllen
- City of Mineral Wells
- City of Mont Belvieu
- City of Nederland
- City of Orange
- City of Pearland
- City of Port Arthur
- City of Port Neches
- Town of Prosper
- City of Richardson
- City of Richmond
- City of Robstown
- City of Rosenburg
- City of Royse City
- City of South Padre Island
- City of Sugar Land
- City of Victoria
- City of Weatherford



WINDSTORM AND FLOOD DESIGN

Windstorm Compliance: BRW has designed 50+ facilities in hurricane zones, all of which achieved WPI-8 windstorm certification from the Texas Department of Insurance. Several of these facilities were located on barrier islands or in flood-prone areas and were also designed to withstand storm surge.

In order to achieve WPI-8 windstorm certification, the entire structure is designed to withstand specified wind pressures and impact requirements. Facilities falling under ASCE 7-16, Category III like the Workforce Development Center in the designated catastrophe area along the Texas Gulf Coast have more stringent requirements such as all doors and windows must be protected or impact-resistant. While protection system such as hurricane panels, screens, and shutter systems may be less expensive initially, the panels often get misplaced, or clients do not have time to harden the facility preparation of a storm. We recommend facilities in these regions utilize impact-resistant doors and windows. During construction, the structure is inspected by a certified engineer to ensure the design requirements were achieved.

The current building code doesn't require higher education facilities to have an ICC 500 rated storm shelter; however, due to the elevated risk of high winds and tornadoes, providing hardened interior construction, a dedicated storage room for disaster supplies such as water bottles, blankets, cots, or extra food goods, and a disaster preparedness plan may be another consideration for your facility.

In areas prone to flooding, we have designed several facilities with a first floor that is either elevated or designed to allow flood waters to pass through the building via flood vents. The main goal is to minimize the structural damage due to surging water. By locating the main operational spaces and mechanical equipment on upper levels and by putting first floor electrical outlets on a separate circuit, these facilities are capable of remaining operational during a storm. Utilizing CMU block walls, corrosion resistant materials, and raised electrical outlets are additional ways to reduce the cost of flood damage and allow for easy cleanup.

PROJECT APPROACH

WE CREATE PROJECTS WITH PURPOSE

Our civic specialists are dedicated to creating facilities that shape our communities for future generations. At BRW, we understand the connection between architecture and society by designing functional and flexible spaces that also capture the spirit of the community and meet the operational needs of the communities we serve.

OUR APPROACH

Teamwork is the cornerstone of BRW's approach to civic projects. Our decades of experience have taught us that team continuity encourages communication, increases efficiency, decreases conflict, and supports owner engagement. BRW believes in a One Team approach, assembling a team of experienced professionals that will take the project from pre-design through post-construction.

As a firm, BRW is committed to a design process that establishes a relationship with the City staff as well as the local community. Through this engagement, the team gathers valuable input from each participant in the effort to understand the specific needs of the community served. Establishing consensus with these constituents is a vital component of project success and has a significant impact on design.

Projects with many stakeholders require an equally clear chain of communication and decision-making process for the Owner and user groups in order to confirm all programmatic requirements and to achieve consensus. BRW is accustomed to leading design discussion forums among varied and disparate groups, and has a record of building support even when their priorities differ.

At BRW, we take pride in the long-term relationships we've built through the years and look forward to bringing the highest standard of quality to the City of Edinburg.

OUR DESIGN PHILOSOPHY

The BRW mission statement, **FOCUSED** ON WHAT **MATTERS**®, says it all. Our clients are driven by a higher purpose, and by serving them, so is BRW. The vision that the City of Edinburg has for the future of the community will have significant impact, and we are excited for the opportunity to work with you to bring form to that vision.

BRW built its success focusing on client's needs one project at a time. For our municipal projects, we create environmentally responsible architecture that is buildable, durable, and timeless. Our comprehensive understanding of best practices and the fine details of a facility, our depth of experience and technical expertise on similar projects, and our proven collaborative approach ensures delivery of solutions that work. With every project, we strive to create facilities that go above and beyond to meet the needs of the end users.

QUALITY CONTROL

BRW Architects has a well-established system of Quality Assurance, created over many years with the mission to better embrace our client's visions through better design, documentation and construction management practices. Our Quality Assurance Program is based on establishing responsibilities and scopes of work early. This is followed by regular team and consultant coordination meetings, quality assurance checklist, SD, DD, and CD document reviews by personnel not associated with the project, regular client engagement by the Principal, and project close-out quality audits with the client. Over the years we have developed and are constantly adjusting a lengthy quality and coordination items checklist that we review and confirm for each project. Any "lessons learned" from each project are fed back into this system.

Elements of BRW's Quality Control Plan include:

General Quality Assurance Measures:

- Formal and informal teaming between interns and senior staff for knowledge and resource sharing
- Project data sheets, including project goals, budget,and schedule
- Clearly defined project Program objectives and expectations
- Clearly defined Workplan for each member of the design team
- Project-Type-Specific quality control checklists, meeting agendas, details, and example documents
- Regular progress & project vision reviews by the Design Director
- Frequent review of quality assurance plan and design progress by the Project Manager
- Continuous monitoring of quality control by the Project Architect

SD/DD Design Reviews:

- Review of project design by the Design Director
- Review all building materials and assemblies with Specifications Writer for early coordination
- Review construction contracting strategy and responsibilities, and Division 01 Specifications requirements with District
- Coordination meetings with all consultants for Schematic Design and Design Development
- Review City guidelines and standards with City, including meetings with Facilities and I.T., and at least one pre-development meeting with City Departments / AHJ.

Contract Documents Review:

- Constructability and peer review at 30% by a non-design-team Principal or Project Manager
- Review that Project-Type-Specific Quality Assurance checklists and forms are complete and coordinated with construction documents.
- 50% CD and Final quality control review / redlines by Principal, Director, and Project Manager
- Review meetings at BRW office with consultants to ensure all coordination comments are understood
- Ongoing coordination and review of drawings with consultants through online / real time construction documents markup and coordination sessions
- Review District guidelines and standards with District

Proactive Construction Administration:

- Establish strong lines of communication with the contractor team members.
- Pre-installation and coordination meetings to include key sub-contractors.
- Clear concise paperwork flow in a timely manner.
- Early implementation of BRW system for smooth project close-out process

MAINTAINING PROJECT SCHEDULE

A challenge of many projects is maintaining the project schedule. Clear graphic communication, specific agendas, and sending ahead the information needed for concise meetings are techniques to expedite the project and maximize time. Getting design options on the table early avoids time wasting and discourages "what if's" later. Again, clear and effective presentations that depict information effectively can validate the decision process and achieve consensus promptly.

Schedule hurdles can be cleared if the project team starts by clearly defining a path for effective communication and a process for decision making. We start every project by establishing the hundreds of tasks required to complete the work. Each task is assigned a responsible party and deadline for completion. A detailed Project Schedule is then openly discussed at the Leadership Group "kick-off" meeting, where stakeholders have input and commit to their responsibilities and deadlines. Maintaining a successful project schedule is truly a team effort. The opportunity to make timely decisions is unlimited at the beginning of a project, but quickly diminishes as the schedule progresses.

In the process of design, aligning the project scope and budget and the timely receipt of Owner review comments are a critical aspect to staying on schedule. All stakeholders should be allowed to voice their opinion, so the final design has broad consensus, but once decisions are approved, all parties should respect them according to the defined decision making process.

If a project falls behind schedule, we immediately gather the entire team together to create a recovery plan. Recognizing the abilities of each team member and the time available is critical to assessing the need for additional resources. Only with "buy-in" by each team member will the project finish on time without sacrificing quality. Timeliness of consultants work is also critical for an integrated and coordinated design. Staying in regular contact with consultants and exchanging our BIM (Building Information Model) data weekly allows BRW to determine the true progress / status of the project and also time to react.

COST CONTROL

In today's booming construction market, we believe the biggest challenge to any project is budgeting and estimating the escalation of construction costs. BRW has a proven track record of delivering projects at or under budget.

We are practiced and comfortable with pre-construction cost estimates provided by either a CMaR or Cost Estimating Consultant. An initial construction cost estimate is created just after Programming, during Concept Design. At this time, various structural and mechanical/electrical systems, along with building forms, facades, and alternative architectural materials and assemblies are considered. The next cost estimate occurs during Schematic Design and involves quantity takeoffs of building assembly components. Depending on the scale of the project, subsequent estimates usually occur at the completion of Design Development and at 50% and 95% Construction Documents. We will work hand-in-hand with the CM at Risk to continually align the architectural and engineering scope while the design progresses.

The key to successful cost estimates during design is to make critical decisions early. As the design progresses, more detailed decisions must fall within an overall budget strategy. BRW works closely with product vendors on material appropriateness, availability, and installation cost. We also prepare "cut sheet" notebooks of selected building components to support unit cost estimates. Should the probable construction cost vary from the target budget, the challenge is to gain consensus quickly from the entire project team to realign project scope back to the target before the design advances further. Besides considering potential reductions in project scope to align with the budget, we also consider alternative assemblies and materials, bid alternates, or even phasing the project if required.

ON-CALL CONSIDERATIONS & CHALLENGES

MAINTAINING QUALITY THROUGH ALL PHASES

Successful project delivery is based on an integrated, total team approach. Your projects are led by seasoned architects whose efforts are dedicated to the projects, and who are intimately familiar with the project type. The same professionals have previous experiences with exceptionally challenging on-call projects and will remain on the team throughout the entire process to ensure results are clear, with a higher quality documentation and better integration of your standards and specific requirements.

BRW believes quality control begins with each member of the design team and a clear understanding of the expectations for the function, performance and maintenance of the facility. Our team will lay out a careful plan to coordinate our documents, reviewing them for constructibility, life safety and overall interdisciplinary coordination. Several key processes contained in the BRW Quality Control Program
include:

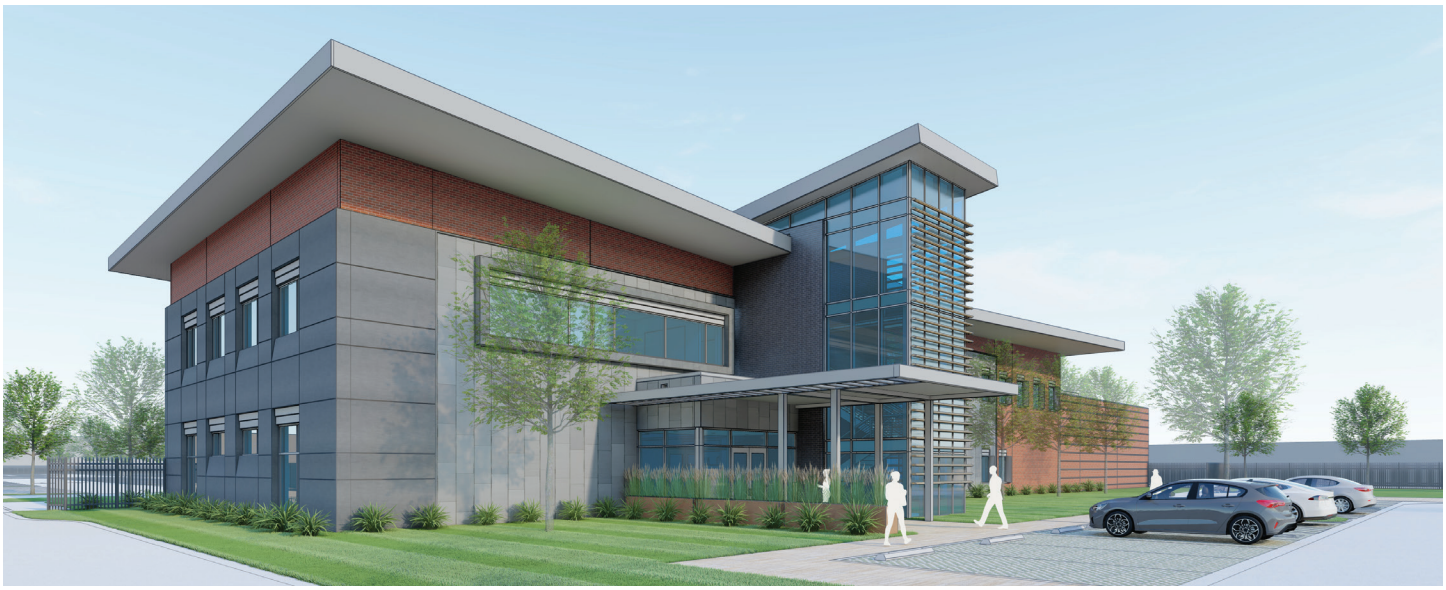
- Weekly project team reviews including consultants (as applicable) to track milestone deliverables, promote coordination of trades, and define responsibilities
- BIM Clash Detection at the completion of each phase / deliverable
- In-house, third-party peer review/audit of the project documents at the following stages:
- Completion of Design Development for Constructibility & Coordination issues
- Completion of 75% Construction Documents Prior to Bid Issue

EXISTING CONDITIONS

Existing conditions are compared to available “as-built” documents during on-site observations. BIM models are developed based on existing as-builts and field observations, and critical construction, systems and measurements are re-verified in the field on subsequent site visits to minimize unforeseen conditions during construction.

PHASING AND SEQUENCING

Constructing a project in a partially occupied building has its challenges. The primary concern is always ensuring the safety of students and staff, but increases in construction cost and schedule, and thoughtful phasing of construction should be considered as well. BRW coordinates with the stakeholders and contractor to determine the best phasing for the project. We include that information in our documents in addition to requirements for temporary construction as a means of separation of construction from occupied portions of the building.



TITTLE MCFADDEN PUBLIC SAFETY CENTER

Lewisville, Texas

The Tittle McFadden Public Safety Center replaces outdated and undersized facilities for Lewisville's Police Station, Fire Administration, Central Fire Station, Quartermaster, Data Center, 911 Dispatch, and adds a state of the art EOC facility integrated with training and multi-use space along with a 5 level parking garage. The new facilities in Lewisville meet present needs and can expand for future growth. They honor the city's public safety legacy and reflect community spirit, City principles, and department values through an inviting architectural design.

The public safety facilities occupy roughly half of a 16+ acre municipal campus that also hosts the city's jail, courts, main library, a recreation center and parks administration, and Information Technology, among other city departments. These vital facilities and functions must be maintained in continuous operation throughout construction, a necessity complicated by concurrent rec center and street re-paving and utility upgrade construction projects. Through forethought to construction phasing, public and staff parking management, and careful design and coordination with other projects, all facilities remain in operation and additional cost and schedule efficiencies were found in working with other projects to get infrastructure in place.

DALLAS WATER UTILITIES SERVICE CENTERS

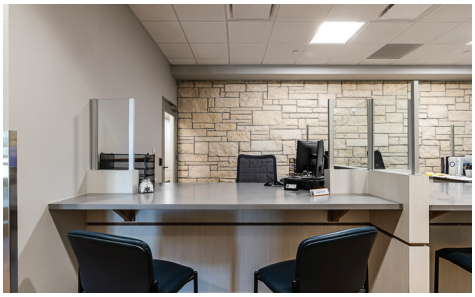
Dallas, Texas

Water Delivery Service Center:

The City purchased adjacent lots for much needed expansion of the Water Delivery Service Center existing facilities. The project renovates an existing facility including offices, locker rooms, and shops, and provides new administrative office and training space. The interior space was carefully reconfigured to maximize usable space and achieved LEED for Interiors silver certification. The extensive interior renovation required careful consideration of phasing in order to maintain operations throughout the construction duration, requiring four phases of sequential moves.

Wastewater & Stormwater Emergency Response Service Center:

Dallas Water Utilities will be consolidating operations from multiple leased facilities to a new owned facility including administration, command center, crew space, work shop, parking and maintenance bays. The site is also being master planned by BRW for additional future use for approximately 4 acres of the site. The project is designed for LEED Silver new construction certification.



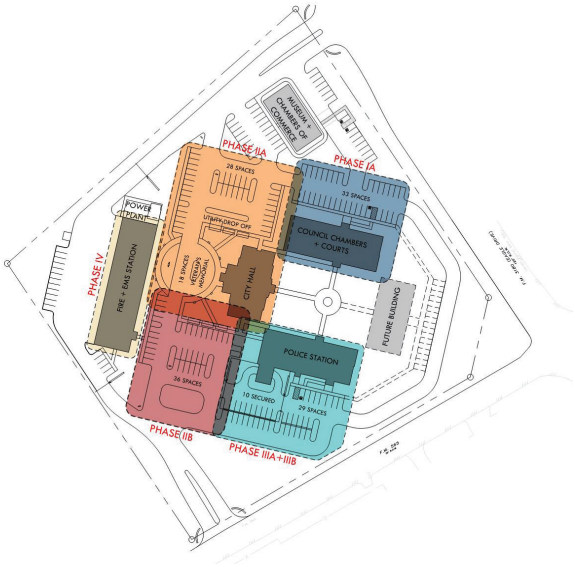
ANNA COMMUNITY LIBRARY

Anna, Texas

BRW teamed with 720 Design to bring life to the City of Anna's first municipal library. Along with City Hall and the Central Fire Station, the library and associated projects for street improvements and the central plaza will complete the masterplan for the downtown municipal core. The Community Library is focused on the residents of Anna and includes an events venue that will be configurable for many different library and other public functions. The library also features arts and crafts and maker space rooms, and a roof patio overlooking the new plaza to further enhance the library as a center of community activity.

COMPREHENSIVE MUNICIPAL FACILITIES STUDY

Leander, Texas



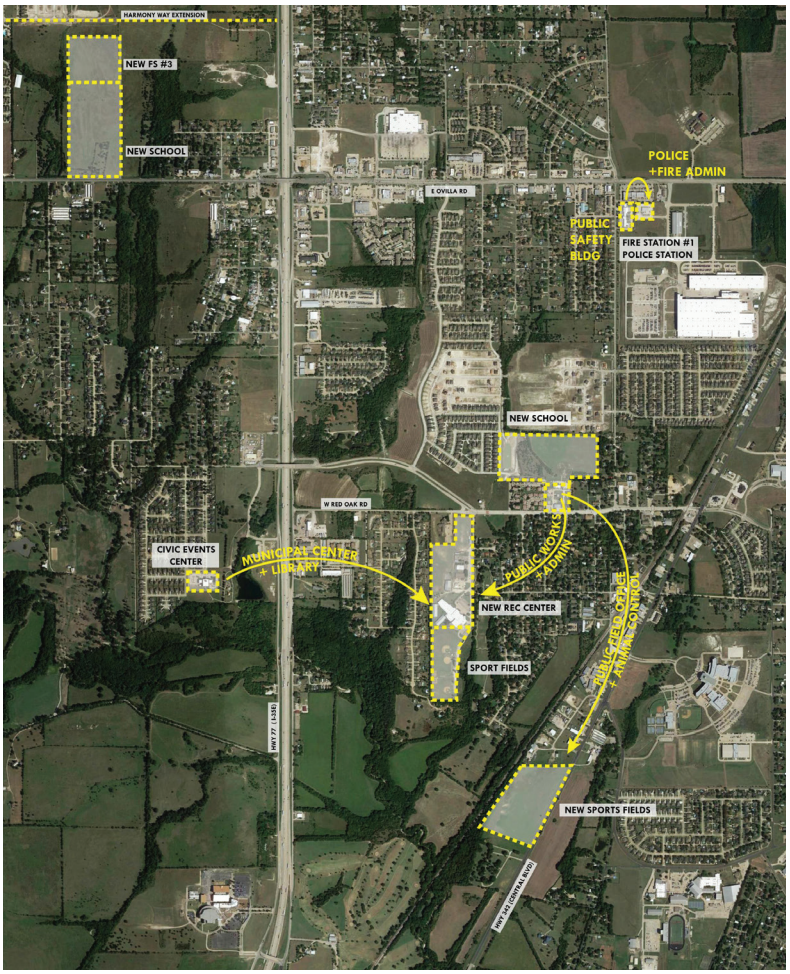
The City of Leander, a rapidly growing suburb of Austin, was seeking guidance for the future of their existing city facilities, including their City Hall, Municipal Court, & Fire Station No. 1. BRW conducted a feasibility study with a written report to help the city clearly assess their options for renovation and expansion and set the city's planning and building goals for the next 10 years.

BRW started with field surveys of the building's current conditions and developed "as built" plans for the existing City Hall, Fire Station & Municipal Court Building. We then worked with the staff through various meetings and planning sessions to establish goals and gather a clear picture of their working conditions and needs. Through these meetings it was made clear that a second goal of the project should be the creation of a centralized Developmental Service Facility.

BRW took the information gathered and created a program of spaces for each department which compared their current space needs with state of Texas standards and determined recommended size requirements for each facility.
We then used these requirements to develop three separate schemes of varying degrees of scope and budget. The three options proposed included a short term fix of only 5 years with minimal renovations and cost, two mid-range solutions including renovation and expansion of one of the facilities, and one long term, 30 year, solution that included two new facilities. Each scheme included a time line for phasing of the construction, schematic floor plans, statement of probable costs, and an analysis of the pros and cons of each option.

As a result of the study, the city decided to implement a mixture of our proposed plans. Phase I, renovating the utility service area of City Hall, finished construction in early 2016. Phase II, transforming the fire station into the new developmental services building was completed in May 2018.

MUNICIPAL FACILITIES ASSESSMENT & COMPREHENSIVE PLAN



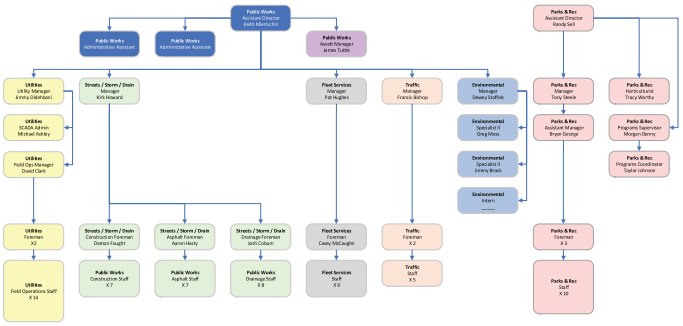
Mont Belvieu, Texas

The Mont Belvieu Municipal Facilities Assessment and Comprehensive Plan analyzed the city's existing municipal complex which is comprised of four buildings, the site's parking lot, a veterans memorial, and a courtyard. The study began by creating as-built drawings of the site and buildings, which included the City Hall, Police and Court Building, Fire and EMS Station, Senior Center, and Museum Building. As-built drawings were created by taking detailed measurements and photographic documentation of each building. A detailed analysis of the buildings' mechanical and electrical systems was performed, and recommendations were prepared as part of the existing facilities assessment. Afterwards, existing spaces were analyzed based on discussions with the City's personnel and professional knowledge.

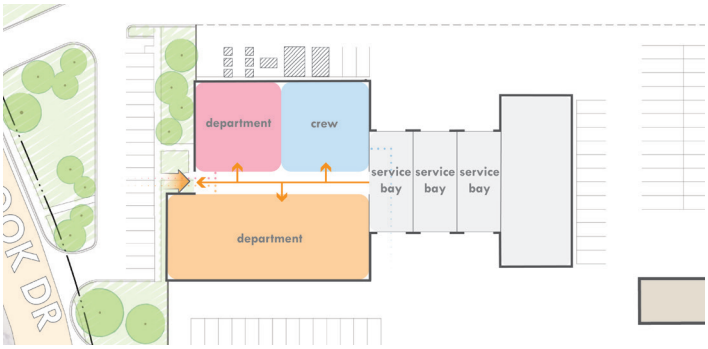
The next step was defining an appropriate program. Several sessions were held with each of the city departments to review the existing department organizations, personnel, and equipment. Tours of the site and buildings then determined their space-use, efficiency, adequacy of parking, physical condition, public way finding and level of physical security. The team also incorporated anticipated operational needs for future personnel into the programming space needs.

The last step was to create proposed drawings for the site plan and floor plan as well as cost estimates for each option. In order to create the most ideal solution, BRW had several meetings with city staff and presented multiple plan options and iterations.

As a result of this study, the City decided to renovate the former senior center into the new Council Chambers and Municipal Courts facility. A new City Hall and Fire/EMS Station No. 1 will also be added to the complex. The BRW team continues to work with the City and all facilities are expected to be completed by Fall of 2022.



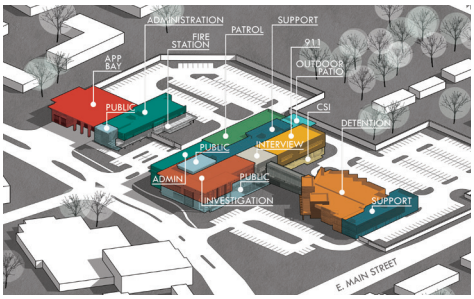
STRATEGIC FACILITIES STUDY



Red Oak, Texas

BRW Architects started the planning study by establishing overall city department structure and budget goals with the City Manager's office. We then structured existing facility walkthroughs and conducted programming sessions with all city department leaders to establish both indoor and outdoor space requirements. The next step compared existing facility space utilization with the new building programs for each facility before developing options for building renovations, additions, or new construction that worked with existing city owned land or potential new sites. Construction cost estimates were expanded to total project budget recommendations proposed over a multi-year implementation plan schedule.

The study encompassed the majority of the city's facilities, including two public works facilities, fleet maintenance, police, courts, animal control, municipal storage, staff training facilities, two fire stations, city hall, municipal /events center, library, recreation center, and baseball, football, and soccer fields.



PUBLIC WORKS STUDY

Grapevine, Texas

The main Service Center building supports the Public Works and Parks field crews and houses the Fleet Services division. The building suffered extensive roof and water damage due to the tornado of December 13th, 2022. Temporary repairs were made to allow Fleet Services to continue operating within the vehicle maintenance bays. The rest of the building remains vacant. This project proceeded on two parallel paths. A drawing package for repairs to the roof structure and replacement of the roof was issued in March of 2023. At the same time, the design team made multiple visits to gather information about the building and how it was being used. We incorporated this information into an organizational chart and a program of spaces that was reviewed with Service Center leadership. Multiple floor plan options were generated for review and comparison. BRW and leadership feel the presented option has the best balance of ease of access for field staff and expanded support spaces.

PUBLIC SAFETY CENTER - FACILITIES STUDY, FIRE ADMINISTRATION, CENTRAL FIRE STATION, AND POLICE HEADQUARTERS

Richardson, Texas

The Conceptual Facilities Plan provided a 15-year facilities and site development plan for the Richardson Police and Fire Departments. Through a series of design charrettes involving the Police, Fire, Parks, Traffic, and Planning Departments, the project team developed five conceptual Site Plans that considered options for site and building expansions required to accommodate the future space needs. Further development of these Site Plans included interior blocking diagrams, indicating necessary renovations and expansions throughout the Complex. Finally, BRW prepared an Implementation Plan with project budgets for possible phased development packages.

As a result of this study, the City decided to partner with BRW to design and build a new fire station, support building, police headquarters, and police memorial over three main building phases. This 10+ acre public safety campus includes new construction Fire Headquarters and Police Station on the same site as the existing facilities, phased to maintain continuous services from the existing site. The Fire HQ includes fire administration and the central fire station with central bulk and quartermaster storage. The Police station incorporates the city's main 911 call center and dispatch, and a large police training and public function room. Fire Training and the city's backup call center are accommodated at another pre-existing facility.

A separate multi-functional Support Building fulfills several operational needs in a more utilitarian setting than the primary headquarters buildings. This structure serves non-office spaces such as vehicle bays for inspection and evidence processing, as well as command vehicle and trailer storage. SWAT Lockers, SWAT Briefing, and Explosive Weapons Storage are also located in this building, as well as Police and Fire Marshal property and evidence storage and bicycle storage.

The project also includes interior renovation of the existing jail building, and a secure pedestrian bridge connecting the new police station and jail, as well as public art displays and a fallen officers memorial. As a project of larger scale and complexity than Greenville's planned facility, this project serves to demonstrate that BRW's capabilities meet and exceed the needs for your project.

SAN PATRICIO COUNTY COURTHOUSE & ANNEX

Sinton, Texas

BRW Architects was tasked with conducting a Comprehensive Feasibility Study for Facility Improvements and the possible Expansion of the County Courthouse for San Patricio County.

The goal of the study was to help decompress an overcrowded County Courthouse. The BRW team took measurements of the existing facilities and produced as-built drawings for the County Courthouse, County Appraisal District Building, and the County Department of Public Health Building. BRW Architects met with each department to understand the programmatic needs and take note of the anticipated number of future personnel that would need to be accommodated in the long term. BRW found that the security, privacy, and safety of the staff needed to be reinforced and protected by the architectural design.

The study revealed that due to court security, court procedure, and operational/spatial needs, it would be in the County's best interest to build a new Courts Annex Building and to renovate the existing County Courthouse to house the County Administration.

Upon completion of the Study, BRW Architects has been hired as Architect of Record to design the New San Patricio County Courthouse and Renovation of the Courts Annex Building.

PERFORMING ARTS VENUE

Bedford, Texas

The Old Bedford School is a 2 story brick schoolhouse which was constructed in 1915. While the building itself is not considered historic, the site which the school occupies is a designated historic site. The 5 acre site is envisioned as a new Cultural Hub for the City of Bedford linking adjacent Recreational and Social Hubs.

The Community Arts Building will be a showpiece for the City of Bedford and a destination for citizens across North Texas. The new Center will focus on a 200-seat, multi-purpose performance venue to showcase performances by local theatrical groups, musicians, and traveling shows. The Community Arts Building will have performer dressing rooms, make-up rooms, and a full catering kitchen.

The 5 acre site is programmed with amenities taking advantage of existing grove of trees and green space from Bedford Road which fronts the site. A variety of event lawns, pavilions, picnic groves, and an outdoor performance venue will bring visitors to the site from across the metroplex, activating the site, and encouraging much needed retail development along Bedford Road bringing additional revenue to the City.

A master planned Black Box Theatre and Conference Center will complete the initial phase and compliment the Community Arts Building.

AUDUBON RECREATION CENTER

Garland, Texas

The Garland Audubon Recreation Center, located in Audubon Park along Oates Road, is now the largest of the recreation facilities within the city. The addition of the fitness room to this facility encourages community involvement and provides support to the surrounding residential neighborhood.

The existing facility was approximately 10,000 sf, and approximately 3,800 sf of space was added to the North side of the Recreation Center to provide a fitness room, expand the activity rooms, and provide much needed additional storage. The fitness room features an artificial turf CrossFit zone and an interactive fitness projection system. One of the most unique characteristics of the existing building is the expansive park area just outside its windows. The addition complements and extends the form to provide enhanced views of the outdoors, as well as invite views in to see the bustling exercise activity. In addition to the expanded facilities, the existing building received a major renovation inside and out, including a more durable flooring system and the replacement of the insulated metal panels with new translucent panels. The new panels provide the interior environment with natural daylighting and solves other deficiencies of the original building envelope. A new fabric canopy was added with direct access from a multi-purpose room to extend the facility's secure outdoor rentable space.

Insurance

INSURANCE

Provide information on the types and amounts of insurance carried by the PSP, including General Liability, Auto Coverage, Worker's Compensation, and Professional Liability Coverage. A list of any insurance claims against the firm within the past 5 years.

TYPES AND AMOUNTS

Professional liability and worker's compensation insurance information can be found on the following pages.

CLAIMS AGAINST THE FIRM IN THE PAST 5 YEARS

In the last five years, BRW has had a small number of claims, most were resolved through negotiation and / or mediation as follows: BRW was a third party to a lawsuit between the contractor and the City of Cedar Park regarding resolution of construction related issues involving a fire station for the City (approx. $25,000). BRW Architects worked closely with our liability insurance carrier and the Architect of Record to resolve construction related issues involving acoustical issues of a public safety training facility for City of Carlsbad, CA that was resolved through mediation, prior to litigation being fully developed (approx. $85,000).

TAB 8

Required Forms

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☒ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

_____

LITIGATION DISCLOSURE FORM

Failure to fully and truthfully disclose the information required by this Litigation Disclosure form may result in the disqualification of your submittal from consideration or termination of the contract, once awarded.

1. Have you or any member of your Firm or Team to be assigned to this engagement ever been indicted or convicted of a felony or misdemeanor greater than a Class C in the last five (5) years?

   Circle One YES (NO)

   1 Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

   Circle One YES (NO)

3. Have you or any member of your Firm or Team to be assigned to this engagement ever been involved in any claim or litigation with the CITY or any other Federal, State or Local Government, or Private Entity during the last ten (10) years?

   Circle One (YES) NO

If you have answered "Yes" to any of the above questions, please indicate the name(s) of the person(s), the nature, and the status and/or outcome of the information, indictment, conviction, termination, claim or litigation, as applicable. Any such information should be provided on a separate page, attached to this form and submitted with your submittal.

BRW is a third party to a lawsuit between the contractor and the City of Cedar Park regarding resolution of construction related issues involving a fire station for the City.

BRW Architects worked closely with our liability insurance carrier and the Architect of Record to resolve construction related issues involving acoustical issues of a public safety training facility for City of Carlsbad, CA that was resolved through mediation, prior to litigation being fully developed.

HOUSE BILL 89 VERIFICATION

I, Stephen Hilt, the undersigned representative of Brown Reynolds Watford Architects, Inc., (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2270:**

1. Does not boycott Israel currently; and

2. Will not boycott Israel during the term of the contract.

3) Is not currently listed on the State of Texas Comptroller's Companies that Boycott Israel List located at https://comptroller.texas.gov/purchasing/publications/divestment.php

Pursuant to Section 2270.001, Texas Government Code:

1. "Boycott Israel" means refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations specifically with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes; and

2. "Company" means a for-profit sole proprietorship, organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or any limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company or affiliate of those entities or business associations that exist to make a profit.

SENATE BILL 19 VERIFICATION

I, Stephen Hilt, the undersigned representative of Brown Reynolds Watford Architects, Inc., (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

Brown Reynolds Watford Architects, Inc.

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

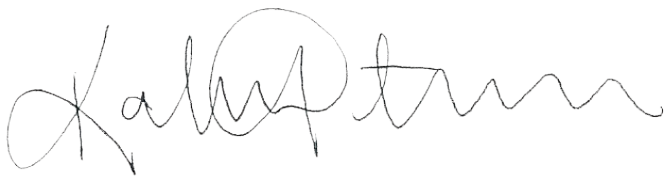
***Letter is signed by firm partner authorized to bind the firm to contract.*

Dear Selection Committee,

We are delighted to submit our qualifications and express our genuine interest in partnering with the City of Edinburg for your upcoming architectural projects. Diverse Studio stands as a vibrant and forward-thinking architectural firm dedicated to delivering advanced design solutions while upholding our commitment to technical excellence. With offices in both Texas and Louisiana, Diverse Studio was founded by a team of professionals who hail from one of the largest and most respected architecture firms globally. While our firm is relatively new, our collective experience is extensive, particularly within the realm of Texas. Our portfolio includes a wide range of successful projects that span various scales and intricacies, spanning various sectors and municipalities.



One of our core philosophies is to "think big, but remain small." This intentional approach allows us to maintain a nimble and client-centric practice. We prioritize building strong, collaborative relationships with our clients, ensuring that their vision and needs are at the forefront of every project we undertake. Being small by design means we can offer a level of personalized service that larger firms may find challenging to provide, enabling us to be responsive, flexible, and highly attentive to detail.

Diverse Studio's collaborative approach extends beyond the drawing board, involving active engagement with stakeholders to ensure that their perspectives are incorporated into the design process. We believe in creating spaces that resonate with the unique identity of each community, and we are eager to bring this philosophy to the City of Edinburg. Furthermore, our commitment to design and technical excellence is ingrained in our practice. Each member of Diverse Studio's proposed team is a licensed architect, and we believe strongly in the value our experience will bring to your project.

In summary, Diverse Studio offers a unique blend of deep sector experience, local presence, and a personalized, client-focused approach. We are confident that our team's expertise and dedication make us an ideal partner for the City of Edinburg. We are enthusiastic about the possibility of contributing to the future of Edinburg and are eager to bring our passion and commitment to your upcoming projects.

Thank you for considering our submission. We look forward to the opportunity to further discuss how we can support the City of Edinburg in achieving its architectural goals.

Sincerely,

3540 E Broad St. STE 120-183

Executive Summary

DIVERSE STUDIO

1. Firm Information

Legal Name
Diverse Studio, PLLC

About the Firm
At Diverse Studio, we believe in the importance of embracing different people, perspectives, ideas and expertise. By embracing our unique talents and solutions, we are able to cohesively produce inspired results. We understand the importance of embracing technology to enhance communication between our team members, owners, and clients to ensure all voices and ideas are heard. Our team believes in the power of active listening. By truly hearing our clients, we are able to celebrate ideas together while bringing their vision to life in what we like to call purpose driven design. We are a driven team with a love of designing beautiful spaces while maintaining an intense focus on technical excellence.

So how do we do it? We start by hearing our client's story and understanding the wants and needs associated with each project. It's part of our story. Why do we consider ourselves part of a studio? Well it's a workroom. Our priority is to work. To collaborate with our partners. To include experts from a diverse background. We built our own team this way and we build design teams that are tailored to each specific client we serve. It's not a radical idea but we believe it's what is missing in many other practices. Our mission is to redefine the delivery of architecture. To not accept the status quo. To remove the hierarchical and isolated practice of design behind. We hope you will see the difference.

Diverse Studio is pleased to submit our qualifications for the City of Edinburg Architectural Services Rotation.
Diverse Studio will serve as the Prime Consultant for this contract and will report directly to the City of Edinburg on all project tasks. Kathryn Petrauskas, Partner and Director of Operations will serve as the Project Manager and day-to-day single point of contact for the City of Edinburg leadership as well as be responsible for coordination with all the team's sub-consultants and collaboration with stakeholders, other governmental agencies, and local jurisdictions (as directed).

While not a requirement on this project, we are a certified MBE | SBE partner and believe in the value it brings to each project.

2. Capabilities and Experience of Team

Diverse Studio leverages our extensive experience in successfully steering sizable and intricate projects involving a multitude of stakeholders. Our adept handling of executive, steering, user groups, and community committees underscores our proficiency in navigating large complex projects.

What truly sets us apart as a small architectural practice is our unwavering commitment to consistency and personal engagement. Unlike larger firms, we guarantee that the team present at the initial interview will remain dedicated to your project throughout its entirety. This continuity proves to be a paramount advantage, particularly in projects with diverse stakeholder involvement. In the realm of multiple stakeholders, where seamless communication is pivotal, our small size becomes an asset rather than a limitation. The absence of personnel rotation ensures that no vital information is lost as your project progresses seamlessly from programming to construction.

In essence, our commitment to a consistent and dedicated project team not only sets us apart but also guarantees a level of personalized attention and continuity that larger firms often struggle to match. With Diverse Studio, your architectural journey is not just a project; it's a collaborative and uninterrupted exploration of your vision from inception to realization.

DIFFERENTIATING CHARACTERISTICS OF OUR FIRM

Diverse Studio distinguishes itself from competitors through its nimble, small-size structure, fostering agility and personalized attention to each project. Our extensive experience in collaborating with diverse stakeholders ensures a nuanced understanding of varying perspectives. We take pride in our unwavering commitment to design and technical excellence, consistently delivering innovative solutions. Moreover, our unique guarantee to maintain consistent project teams throughout the entire process enhances communication and understanding, ensuring continuity and reliability. This tailored, client-centric approach sets Diverse Studio apart as a trusted partner, dedicated to achieving exceptional results in every endeavor.

PERFORMING PROFESSIONAL SERVICES IN A TIMELY MANNER

Leveraging cutting-edge technology platforms such as BIM360, Revit, Bluebeam, Miro, and others, we facilitate seamless communication within our design team, consultants, and clients. These collaborative tools ensure real-time coordination, accuracy in documentation, and an open line of communication throughout the project lifecycle. By embracing these advanced technologies,we enhance efficiency, foster transparency, and promote a dynamic exchange of ideas, ultimately delivering a superior experience for all stakeholders involved in the design and construction process.

Our team's unwavering commitment to technical excellence plays a pivotal role in crafting meticulous drawings and specifications,eliminating ambiguity and ensuring clarity for the bidding process. By adhering to Owner Project Requirements (OPR) documents from the project's inception, we establish a consistent framework. This not only aids in maintaining clarity and precision but also serves as a measuring stick, allowing us to gauge the project's progress against set benchmarks, ensuring that the design aligns with budgetary and schedule constraints while meeting client expectations at every stage of development.

APPROACH TO STAFFING

The City of Edinburg can rest assured that our qualified team members will be appropriately engaged and committed during all phases of the project. The main office location that will be providing services is our Dallas office, with additional support as needed from our Lafayette office. Diverse Studio and our key consultants are available and committed to delivering quality work to the City of Edinburg. Our resource management plan focuses on two steps:

1. Select a qualified team

By carefully assembling our entire project delivery team, we have proposed a team based on qualifications, demonstrated commitment to clients, outstanding quality of work on complex projects, and experience with municipal institutions.

2. Determine the availability of the team

Diverse Studio continuously monitors workloads on all projects in the office to ensure that our professional commitment to you, on this project, is rock solid.

Diverse Studio takes pride in guaranteeing that a principal in the firm will have continuous and thorough involvement. Additionally, our design team members have multi-disciplinary skills allowing them to participate in all phases of a project. Our horizontal organization has several benefits; it ensures team size and organization is properly suited for each project and client. Given their skill-sets, individual team members adapt and respond to issues arising from the design process, client input, or unforeseen circumstances. All key personnel will be available to fully work in all phases of these projects from beginning to the end of construction administration. In identifying a design issue or opportunity, the team's decision-making process is streamlined, allowing for both responsive and thorough resolution. This organization ensures, even under time constraints, that communication between the client, architect and consultants is consistent and efficient. The designated team members will be assigned to the project for its entire duration. Our standard practice is to not change staff from design to construction administration. This commitment to staffing continuity, ensures that project objectives are clearly understood by all members of the design team and carried forward through all phases of the project. Project objectives are also reviewed during regularly scheduled construction progress meetings so that the team does not waiver from fulfilling the needs and desires of the City.

Bio
As a Dallas native, Kathryn is passionate about the unique synergy that occurs between humans and their environments. She believes that architecture should celebrate and augment the potential relationships and transformations that occur between people and places within diverse communities. Kathryn has extensive experience in the municipal and education sectors and is inspired by creating public spaces that become extensions of the communities around them. Through the design of public architecture we have opportunities to create intersections between people, ideas, and perspectives that allow for a new kind of synergy to be discovered within our cities.

When not working, Kathryn tries to find joy everywhere I can. She is an explorer at heart and has a goal of hiking in all the national parks. Her loves also include black and white photography, beautiful typeface, and traveling the world.

Partner | Design Director

Bio

A native of Atlanta, Wesley has led the design of significant academic, health, athletic and research facilities with an emphasis in the urban planning and placemaking. Project like Lago Vista excite him because it provides the opportunity to reimagine our civic spaces and provide meaningful environments for the community to utilize and enjoy. With a 15-year career and portfolio spanning throughout the United States and Mexico, his projects have been consistently recognized through multiple AIA and industry awards, achieving the highest levels of design excellence and environmentally sensitive strategies. His design philosophy is focused on pushing projects beyond the status quo, creating meaningful connections to the communities each project serves. A devoted husband to Jill and father to two boys, Hayes and Graham, Wes looks for every opportunity to get outside, hiking, camping and traveling to the next adventurous destination with his family.

Partner | Managing Director

Bio

Francisco's core values revolve around excellence in technical execution while prioritizing my clients' vision and goals. With over 15 years of experience, he has worked extensively on a wide range of civic, cultural and community work with multiple municipalities throughout the Midwest region. These projects range from City Halls, Libraries, Police and Fire Stations, Schools, and Museums. Throughout his career, Francisco has consistently strives to deliver exceptional architectural solutions that not only meet the highest standards of design and functionality but also align with his clients' unique requirements and aspirations. Francisco fosters enduring connections with clients and contractors, positioning himself as a reliable ally and trusted partner.

In his free time, he actively serves as a youth baseball coach, sharing his knowledge and instilling important values such as teamwork, discipline, and perseverance. Additionally, Francisco finds joy in road cycling, as it allows him to recharge, explore new surroundings, and find inspiration in the world around me.

City of Jennings
t. 337.821.5500

Over the past 30 years, this small southern town has been revamping its downtown core. When the opportunity arose to create a new city hall, the city chose to further reinforce and enhance the downtown by moving their administrative offices and water revenue department to Main Street. The building they chose sits on a major Main Street axis and provides a crowning jewel in their efforts to revitalize the previously decaying urban center.

The existing 15,000 square foot building has been many things in its 114-year history from a farm implement company to an office supply retailer. Approximately 1,600 square feet were added to accommodate the Water Revenue department and drive-up services. A significant portion of the building also houses a local art museum with a gallery space, offices, staging and storage spaces. The museum has a long history with the city and represents years of acquisitions by one of its major founding families. While the exterior of the building focuses on history and revitalization, the interior is about a bright and modern future.

This adaptive reuse project revitalizes a building that has a varied history spanning over 100 plus years, housing various local businesses. The historic façade has been completely refurbished, maintaining historic elements.

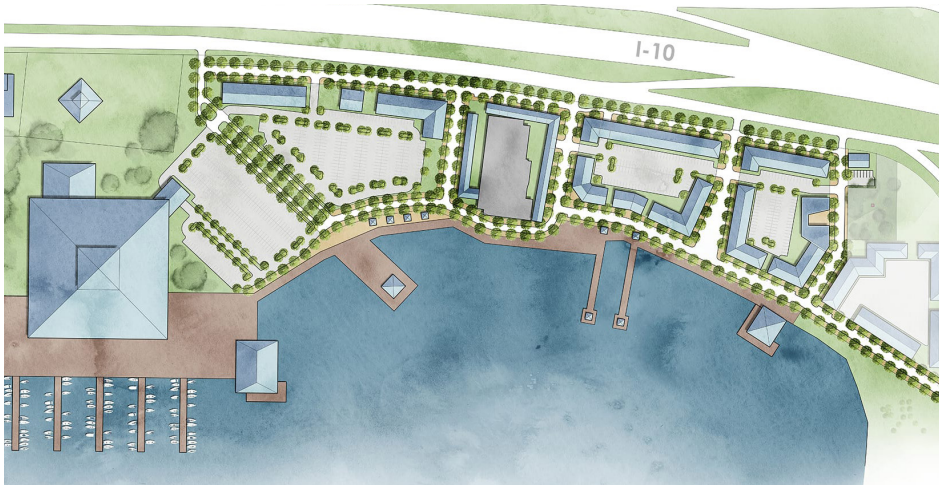
Team Members: Wesley Thiele served as a Project Planner
Client: Lauren Bynum
City of Lake Charles,
t. 337.491.1542

The Lakefront Project in Lake Charles aims to unify two distinct areas of the lakefront—the northern side and the eastern shoreline near downtown—through an innovative and thoughtful development plan. By promoting walkability, reestablishing a historical architectural character, and focusing on the water, this project aspires to be a catalyst for future development and a model for smart growth strategies. This essay explores the urban strategies employed in the project and the broader benefits of smart growth and downtown revitalization.



One of the core principles of the project is enhancing walkability. Walkable neighborhoods offer numerous benefits, including improved public health, reduced traffic congestion, and stronger local economies. By creating pedestrian-friendly environments, the project encourages residents and visitors to engage with the area more intimately, fostering a sense of community and place. The development will feature interconnected pathways, ample public spaces, and mixed-use buildings that blend seamlessly with the historical architectural character of Lake Charles. This approach not only preserves the city's heritage but also enhances its aesthetic appeal, making it a more attractive destination for both residents and tourists.

Waterfront developments inherently possess unique advantages, such as scenic views and recreational opportunities. By focusing on the water, the the development aims to maximize these benefits, creating a vibrant and dynamic environment. The continuation of the boardwalk is a critical component of this strategy, providing a continuous public space that connects different parts of the lakefront. This seamless connection encourages outdoor activities like walking, jogging, and cycling, promoting a healthier lifestyle among residents. Moreover, the boardwalk serves as a social and cultural hub, hosting events and activities that bring the community together.

The goal of the development was to create a more meaningful connection between the northern lakefront area and the downtown eastern shoreline and promote walkability throughout.

t. 940.224.8156

A place for nested growth, change, and creative learning.
The existing Forest Meadow Junior High School is approximately 150,000 SF and was originally built in 1960's. The school has been added on to over the decades, creating a campus that did not have clear wayfinding, had a lack of daylight, inadequate learner spaces, and maintenance issues.
The community was actively involved during planning to help the team identify what works well, what needs to change, and discuss the existing traditions and aspirations of the community. Our team worked with district stakeholders to identify a vision for the future of Forest Meadows Middle School. The result was reconfiguring existing spaces to create a central circulation spine that connects the entire school, including the new 6th grade house, and provides a clear wayfinding path for daily use. This central spine is also designed to accommodate the vendor booths during the "Market in the Meadows", a tradition as old as the school.
The new addition and renovation will create an equitable facility to the planned replacement at the Lake Highlands campus. Spaces to be added include classrooms, art rooms, specialty spaces such as STEM and CTE reconfigurations, and the expansion of the dining facilities and food service area.

When asking community members “What makes FMJHS special?” they said, “This school is tradition rich. It’s a place where everyone fits in. There is so much diversity within the students — a kaleidoscope.”

A new vibrant Student Success and A new vibrant Student Success and Learning Commons becomes the new heart of the Campus.
The existing building consisted of one large building with multiple entrances and no clear definition of a front door, wayfinding, brand, and lacked connections to the outdoors. The design strategy of this addition and renovation project was to create a modern learning environment that is designed around student and faculty experience, create a new campus gateway, and enhance connectivity with the community.

Our team designed two additions along the north and south axis to the existing building. The north building houses student services functions and creates a the primary entrance to the campus. The building sits in a formally landscaped quad and creates a well defined axis through the existing building. The second building is located on the south side and is separated from the existing building with a student centric landscape garden, and houses a café that spills into the outdoors. The south building is lifted from the ground to create a second entry portal into the campus.

Student experience is central to the design. This unique education building design will meet the needs of a diverse student body while empowering and engaging them in a broadly supported, and self directed learning experience. Robust vertical and horizontal movement, including the north / south spine through the new learning commons conceived as a dynamic marketplace will eliminate barriers to interaction maximizing the freedom of personal choice for each student. Inclusive and engaging learning environments will help students thrive and graduate as well rounded citizens.

Together with TCC we re-imagined the entire sequence of student flow to provide the best in class student services and student support to all students of the TCC campus.

CONFLICT OF INTEREST
DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☒ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

SENATE BILL 19 VERIFICATION

I, Kathryn Petrauskas, the undersigned representative of

Diverse Studio PLLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

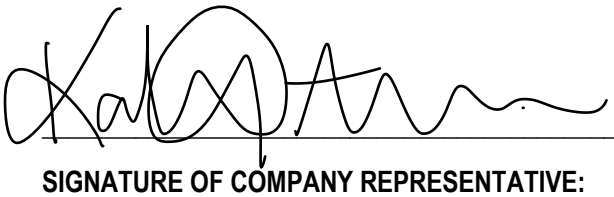
Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - a) *means, with respect to the entity or association, to:*
     - i) *refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - ii) *refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - iii) *terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - b) *does not include:*
     - (i) *the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - (ii) *a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.



4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

NEW PARKING GARAGE
City of Edinburg

July 16, 2024

Mr. Mardoqueo Hinojosa, PE, CFM, CPM, City Engineer
City of Edinburg
415 W. University Drive
Edinburg, Texas 78541

Re: RFQ 2024-8 Architectural Services Rotation

Dear Mr. Hinojosa:

ERO Architects (ERO) is pleased to present the City of Edinburg (City) with our professional service qualifications to assist your architectural needs on a rotation list. Our staff is interested and excited about the possibility of continuing to work for the City of Edinburg and wholly committed to serve your needs. ERO will work with City leadership and department heads to ensure the best interests of the City are met by providing competent services and staff. **ERO has several on-call clients and has the experience and ability to quickly ramp up our services and team for small or large projects with fast-track schedules.** ERO has a staff with superior background, training, qualifications and licenses to meet all the requirements of the scope of services requested. ERO abides by all mandated federal and state facility requirements.

ERO is familiar with Edinburg projects and has served as the architect-of-record for the City's ACE building, Downtown Parking Garage and Retail Center and the Police Department's Training Facility. Other projects ERO is currently involved with are the Hidalgo County Courthouse replacement building, as well as several other Hidalgo County, Edinburg CISD and UTRGV buildings in Edinburg. We believe the City always seeks cost-effective, functional and durable municipal facilities, a commitment we share with the City. We are knowledgeable about how city government operates, and we know it is important that all parties "be on the same page" as any important project gets underway. Our design team will analyze sites and programs in order to present plans that reflect local conditions, environments, and cost challenges while considering safe and seamless movement within and outside the facilities. With our vast experience of local area projects, ERO has gained valuable work insight and knowledge such as:

- Facility requirements, operations and maintenance expertise.
- Familiarity with the geographical area and facilities of the City of Edinburg.
- Familiarity with the City's design standards and codes.
- Proficiency with area permitting processes and procedures.
- Successful working relationships with local area sub-consultants and contractors.
- Public involvement strategies for project transparency and awareness.

ERO principals live in Hidalgo County and have first-hand experience with planning, architectural and engineering and communications services suitable for the City. **We are a local company with our office in Edinburg just a few minutes away from downtown Edinburg.** We understand the Lower Rio Grande Valley public-sector fiscal demands having completed more than 320 projects in the region. ERO's planning and design team have planned, programmed, designed and/or construction administered several RGV municipal building projects including two city halls, two fire stations, four police stations, two office buildings, four events centers, two mechanic shops, one parking garage, one land fill scale house and two city parks.

We are particularly proud to be the architect-of-record for the new City of Weslaco public safety complex, City of Mercedes police department building renovation, new San Juan city hall/transit terminal building, new fire station, PD facility expansion, new park and recreation center, and the recent modernization of Pharr's city hall. Past municipal projects include the McAllen Performing Arts Center, and the new Brownsville Public Utility Board's Service Yard and new four-story Annex Building. **We are renowned for meeting project objectives with realistic programs that match budget expectations and strive to deliver on Edinburg's promise of good tax dollar stewardship.**

What sets us apart from other professional services firms is our holistic approach to each project. Our clients are strategic design partners during each phase of the project. The result: design solutions that meet or surpass client needs and expectations. ERO believes that high-quality communications and documentation lead to better project outcomes and costs. We know that when all partners and disciplines are involved throughout the entire design process, designs become more pragmatic, economical and delivered on time.

We have searched online for addendums to this RFQ and have not found any, but if we do, consideration of their content will be included in our statement of qualifications. I am the primary contact for Edinburg projects and all correspondences serving as the Principal-in-Charge, as well as Edgar Villanueva, AA. I am responsible for our statement of qualifications clarifications and authorized to bind the firm to a contract. We are located at 135 Paseo del Prado, Suite 58, Edinburg, Texas, 78539. My email address is bgodinez@goERO.com. My contact phone number is 956.655.4655 and fax number is 956.322.3733. ERO is HUB and MBE certified and we remain committed to using subconsultants who are local. We look forward to continue serving the City of Edinburg. Thank you for the opportunity.

Respectfully submitted,

Brian Godinez

FIRM EXPERIENCE AND HISTORY

ERO is a Texas-based, multi-disciplinary architectural and engineering firm specializing in public-sector design. Originally established in 2001, ERO focuses on creating municpal facilities that are durable, cost-effective and create pride within the community. On December 13, 2013, Eli R. Ochoa, PE, AIA formed goERO International LLC dba ERO Architects with two of his long-term coworkers: Brian Godinez and Octavio Cantú, Jr., AIA, NCARB. ERO is 100% Hispanic-owned and HUB-, MBE- and DBE- certified. Eli retired February 29, 2024.

ERO is headquartered in Edinburg and the staff who will be working on City of Edinburg projects primarily office and live in the Edinburg area. A highly diversified, professional team manages ERO with the leadership possessing more than 200 years of combined experience in planning, architecture, structural engineering, construction and communications.

Our staff of 25 highly skilled individuals is comprised of six licensed professionals and 11 associate architects, one structural engineer, two interior designers, three visualization specialists and one Autodesk Revit certified professional. **Our workload occupies about 75% of our capacity. ERO has the flexibility and capacity to assign part-time staff to Edinburg projects that may be smaller in scale and scope.**

Many of our projects are located in dense urban environments and were operating during construction. Projects such as these as well as many renovation projects have given us in-depth experience with design challenges, occupied buildings, phasing, staging, fast-tracking, high-quality construction documents and the standards and codes making us a smart choice.

Today, ERO is an award-winning architectural firm with major successes in modernized, renovated and re-purposed spaces that deliver flexible environments supporting community needs. We designed the LEED Gold, Texas State Technical College University Center joint-use facility for graduate student studies. Since 2011, we have won 16 awards. The most recent is 2017 Architectural Firm of the Year from Allied General Contractors Lower Rio Grande Valley.

REdgarding our quality of work, Chuck Smith, PE, Fiscal Initiatives & Capital Projects at San Jacinto Community College, publicly commented, *"ERO understands structural and construction concerns better than most other firms, while still exhibiting excellent design sensibilities."*

ERO completed more than 320 public-sector projects comprising more than 10,000,000 total square feet. In the last five years, our accomplishments include the design of the new Edinburg ACE and Downtown Parking Garage facilities, Brownsville PUB new Utility Service Center and new Annex building. We have designed city halls, public safety buildings, performance and events centers and other city facilities for McAllen, Edinburg, San Juan, Pharr, Mission, Mercedes, Weslaco, Brownsville, Combes and Port Isabel. We are currently working on several Hidalgo County and Edinburg CISD facilities.

The firm offers project management, full-service architectural and engineering services, interior design, community engagement, master planning, programming, feasibility studies and facility assessments, 3D modeling, visualization and renders, cost estimating, code compliance, preparing specifications, 3D scanning and construction administration. We find these additional services, a detailed list which follows, provide the client a much more cohesive project:

- Facilities Assessments
- Master and Facilities Planning
- Bond Planning
- Bond Strategies and Community Engagement
- Pre-planning
- Community Engagement
- Programming
- Conceptual Design
- Schematic Design
- Design Development
- Construction Documents
- Structural Engineering
- Roofing Design
- A350 Revit 3D Design and Engineering including Point Cloud Data
- Cost Estimating
- Code Compliance
- Specifications
- Bid Preparation and Negotiations
- Contractor Selection (or CM@R collaboration)
- Construction Administration
- Warranty and Close Out

ERO ADVANTAGES AND UNIQUENESS

- Public sector focused with more than 320 projects successfully completed since 2001.
- Familiarity with the geographical and environmental Edinburg area, including downtown.
- Thorough knowledge of municipal planning, design, construction, finance and fiscal constraints.
- Proficiency with Edinburg ordinances, environmental issues and local permitting processes and procedures.
- Familiarity with municipal and government facility design standards, specifications and codes.
- Experience in the preparation of bid packets to meet all city of Edinburg requirements.
- Understand Edinburg facility requirements, operations and maintenance expertise.
- Successful working relationships with Edinburg-area consultants and contractors.
- Earned several regional and national design and construction awards during the past several years.
- Culturally connected design (embed the best of the Edinburg community into the fabric of our cultural designs).
- Award-winning, sustainable and durable designs.
- Certified 100% minority-owned firm: HUB, MBE, DBE & SBE certifications.
- Local-owned firm with principals and staff proud residents of the Edinburg-area.

STAFFING APPROACH

ERO's methodology and hierarchy of our projects is centered on a strong and ongoing collaborative effort among the City's staff representatives and all design team members and partners, led by Octavio Cantu and Edgar Villanueva. This team has the experience needed for the design of on-call projects. ERO is comprised of a capable, best-in-class team that works its way down the chain of command from the project architect to the project manager and the design and production team; along with our consultants. The meetings serve as a forum for sharing ideas and building on design concepts. Issues are discussed and resolved through collaboration. The meetings assist in keeping lines of communications open between the project team displayed below and with City staff and stakeholders. ERO has the flexibility and capacity to assign part-time staff to Edinburg projects that may be smaller in scale and scope.

PHILOSOPHY

ERO has a philosophy of measure twice and cut once. We make it our priority to understand the scope, Owner values and requirements, community needs, and costs of our projects, before any design ever begins. We know that relationships foster success and they are built around people using a high degree of listening and collaboration—two values stress adamantly at ERO. We emphasize responsiveness, creativity, collaboration and innovation in design as well which are fueled by communications and high-powered technology. We use the following steps to ensure full understanding of the project and process for successful coordination:

- Understand the needs, requirements and costs of the project before design ever begins (alignment of attributes, timing and capital constraints at the same time)
- Delineate an explicit record of stakeholder expectations (client acknowledged)
- Account for risks as a part of cost estimating in the programming phase
- Apply quality management principals
- Verify the Design Team's understanding of philosophy and expectations.
- Verify the Design Teams' understanding of current design standards, guidelines and codes
- Revisit the project status against the project plan during weekly meetings, at project milestones and at the end of each phase
- Collaborative design (holistically) throughout the project
- Engage the advanced aspects of Autodesk BIM and Revit 360 to improve the project quality.

PROJECT APPROACH

We follow an established management plan that has mutually agreed on milestones throughout the project schedule. Formal meetings and reviews occur at those milestones. Informally, for the client, the Feasibility/Design Team meets weekly to discuss issues, advance concepts, test adherence to the plan and seek and

solve problems. All meetings are documented and the findings or minutes are posted for 24/7 access on Owner InSite.

We see ourselves as tasked with the heavy-lifting, hired based on our technical experience and ability to coordinate a large team of consultants. We are responsible for specific tasks including checking the existing plan for issues, working with county agencies to achieve zoning and code compliance, and implementing the filing strategy, informing all parties including developers and financial backers of progress and delays during the build-out, and creating all of the construction documents.

The most important way to make a project a success is to embrace the collaboration and build long-term relationships with other professionals in the field.

ERO believes that the most important factor to consider in accomplishing this project is to maximize the scope and quality in order to give the greatest value to City of Edinburg.

Achieving a project on time and on budget is fueled by our practiced innovation. Early decisions affect the quality of outcomes so these elements are revisited and refined, if necessary during every phase throughout the development process. Risks critical to cost containment are identified as well as possible solutions. Problem seeking is a technique used during every phase of the project.

The planning approach can generally be organized into basic fundamentals. While these components are organized and discussed in a particular sequence, it is important to understand that they all are closely intertwined and generally overlap in sequence.

- **City of Edinburg values and measures of success**
- **Determining the Need**
- **Seeking an Optimum Facility Program Mix**
- **Building a Project Cost Model**
- **Develop a Financing Approach and Plan**
- **Create an Implementation Plan.**

MANAGEMENT PLAN

ERO has a proven workflow process from feasibility/planning to programming to warranty assistance and close out. ERO's methodology is centered on a strong and on-going collaborative effort among the client's representatives and all design team members and partners. The process results in a comprehensive understanding of the design goals and fully addresses form, function, cultural aspects, budget and schedule. Other results of the collaborative effort are:

- **Collection of all relevant data**
- **Joint development and understanding of operating parameters**
- **Common definition of project needs and values**
- **Meaningful metrics to measure success, iteratively and cumulatively; and,**
- **Accurate and timely conveyance of the architectural challenges and optimum solutions.**

ERO develops a project management plan for each project. We establish clear lines of authority, roles and responsibilities for task delivery. Similarly clear lines of communication provide complete information exchanges and rapid responses to inquiries, questions, comments and project needs. Our management team maintains constant and frequent contact with the client to ensure the engagement during all phases of design and has full understanding as the process unfolds.

We are comprised of a capable, best-in-class team that emphasizes responsiveness, creativity, community collaboration, innovation and performance. Our firm's public-sector focus has given us a deep understanding of clients' needs and gives us the expertise needed when helping them develop a strategy for their capital program. The team's commitment to quality stems from our emphasis on pride of performance.

Quality assurance and controls procedures are designed into all processes to ensure that each discipline and each project phase—from design through construction—are coordinated, complete and technically accurate.

Whether the project is large or small, ERO's time-tested approach is applied consistently to integrate our best practices for use by all staff and working environments. The basic tenets of our approach are applied to programming, cost estimating, design, visualization, production, structural engineering, interior design, construction administration, close out and warranty assistance. ERO uses communication and technology-supported decision-making procedures, always revisiting progress and providing documentation.

All partners are kept informed of progress at weekly meetings. The meetings serve as a forum for sharing ideas and building on concepts. Issues are discussed and resolved through collaboration. Outstanding issues are logged and tracked until resolved. Meeting minutes are distributed within 24 hours and available on Owner InSite. The minutes not only record decisions but all the reasons leading up to the decisions. The meetings assist in keeping lines of communications open, build a sense of efficacy and maintain the trust in the relationship. All information is available online on a 24/7 basis.

PROJECT ORGANIZATIONAL APPROACH

ERO's approach for architectural and engineering services is the culmination of many years of experience and training. Success in any endeavor comes from the application of our experience and training. ERO's approach and best practices are principles that are applied consistently and integrated into all staff and working environments. The basic tenets of our approach are applied to programming, cost estimating, design, visualization, production, structural engineering, interior design, construction administration and warranty assistance and close out.

ERO uses communication and technology-supported decision-making procedures, always revisiting progress and providing documentation. Each project begins with four core principles to guide ERO toward consistent and successful outcomes:

- **Communication—Clear and open communication is the first priority. Without this, nothing else is possible. Good communication is getting the right information to the right people at the right time. Use technology to provide immediate and continuous access to information.**
- **Integration—Optimize working practices, methods, and behaviors to get maximum value. Create a culture where the team is able to work together and share and build on one another's successes.**
- **Interoperability—Build practices to capture all information and share it to avoid repetition.**
- **Knowledge—Capture everything in dependable archives. Use real-world rules about how things relate to each other to improve efficiency. Use knowledge to eliminate the mundane and speed up critical decisions. Pay attention to the details. Record information to confirm decisions or to create future value.**

BEST PRACTICES

ERO sees best practices as an integrated practice requiring new skills in communication and collaboration with all partners at all stages and levels and working together to define mutually beneficial objectives while increasing value. The basis for communication and collaboration is data. ERO has the technology and processes for capturing and converting the data into practical business intelligence. ERO is a collaborative organization. All partners are kept informed of progress at weekly meetings. The meetings serve as a forum for sharing ideas and building on concepts. Issues are discussed and resolved through collaboration. Outstanding issues are logged and tracked until resolved. Meeting minutes are distributed within 24 hours and available on Owner InSite. Also, minutes not only record decisions but all the reasons leading up to the decisions. The meetings assist in keeping lines of communications open, build a sense of efficacy and maintain the trust in the relationship.

Our technology is shared by our partners resulting in Autodesk containing all building systems, quantities and materials as well as all information from various design versions. Navisworks is run to help identify any clashes. We find that when all disciplines are involved throughout the design, particularly early on, the designs become more pragmatic and economical as well as avoiding large design alternations or change orders. It is during these meetings that discussions on quality, timeliness and budget occur.

The client, building occupants, and operation and maintenance personnel re involved to contribute each's understanding of how the building and its systems will work for them once they occupy it. The fundamental challenge of "whole building" design is to understand that all building systems are interdependent.

FEASIBILITY/PLANNING

With every project, ERO is mindful to design what the Owner needs and wants at the cost agreed on. Our holistic/collaborative approach, programming process and innovative solutions make this happen on every project. Projects such as these as well as many renovation projects such as the Pharr City Hall interior remodel have given us in-depth experience with dense urban environments, design challenges, occupied buildings, phasing, staging, fast-tracking and the standards and codes we need to be a smart addition to your team.

ERO's approach for architectural and engineering services is the culmination of many years of experience and training. Success in any endeavor comes from the application of our experience and training. ERO's approach and best practices are principles that are applied consistently and integrated into all staff and working environments. The ERO team begins the planning by assessing needs from two approaches. The first approach is the physical evaluation and the second approach is evaluating space uses and adequacy. Then ERO creates concepts using the as-

sessment information and through various meetings with the City staff. ERO uses Programming Principles and creates a living document for each and every campus to follow.

ERO is experienced at leading the assessment, development and implementation of effective strategies to make a compelling presentation of the evidence of need to engage your community and win its support. The steps we go through encompass:

- Involvement of interested parties in the definition of the scope of work prior to the design effort for research
- Establish goals
- Gather and analyze relevant data early in the process so that the design is based upon sound decisions including how the facility functions, site considerations and sustainability targets
- Identify applicable codes, standards and risks
- Determine quantitative requirements
- Iteratively review to determine whether the plan remains within budget
- Finalize a plan for Owner approval.

COMMUNITY ENGAGEMENT

ERO feels so strongly about the need for collaborating with community stakeholders that we maintain professional staff for community engagement. The greater the cultural relevance of a project, the greater the community support for the expenditure of public monies and the leadership decisions. ERO sees it role in working with community committees to professionally lead discussions, presentations, charettes, focus groups and the like to gather input and gain understanding and support for master plans and design concepts leading to programming and schematic designs. We feel it is important to keep the community informed throughout the entire process until close out. During contracting, ERO works with City leaders to define ERO's exact community engagement role for the project.

PROJECT STARTUP – INITIAL REVIEW PROCESS WITH ADMINISTRATORS AND STAFF

- Defining the project vision
- Clearly identify and define the goals of the vision with a kickoff/visioning session with stakeholders including:
  - Confirm the project vision and overall goals.
  - Identify the type of data to collected and the collection method/approach
  - Articulate the format and content for reporting
  - Discuss the structure and security of the data
  - Develop a Site-Specific Project Master Plan
  - Refine the lines of communication to the leadership and staff to the community.

PROJECT LAUNCH AND BACKGROUND DATA VERIFICATION

- Verifying existing data on location of new facility
- Develop master plan for facilities
- Couple Specifications and with Design Standards along with the building assessments to create the basis for a written draft of a concept.
- Determine the safety, structural, mechanical and code compliant issues. Define physical scope through the development of a matrix with estimated cost values for leadership decisions
- Review and determine the goals and adequacy with the greatest amount of flexibility to address multiple approaches to the delivery or evolving civic , public safety needs
- Review and update (or create) a set of design standards through a collaborative process.

QUALITY CONTROL

We believe that quality assurance and control procedures are an integral part of the design and production process to find and correct errors before the design goes to the field. Quality concepts are designed to ensure that each discipline and each project phase—are coordinated, complete and technically accurate. The planning team, from creation of the Design Standards t document development, strive for the highest quality control / quality assurance of all documentation. This protects the City's financial interests by minimizing the risk of programming cost extras and delays.

PLAN TO UNDERTAKE THE SCOPE OF WORK

ERO uses a proven strategy to guide the feasibility and planning resulting in a municipal complex Master Plan. The Master Plan is a compilation of information, policies and statistical data about municipal spaces. The Master Plan is a "road map" organized to provide a continuous basis for planning that address and meet the requirements of an ever changing and future-focused demands of public spaces. Health, Safety and Security is the top priority in designing new buildings, followed closely by flexible and right-sized spaces.

PROJECT PROGRAMMING

Our holistic approach to every design project sets us apart in our industry. We view our clients and members of the community as design partners during each phase of a project. We believe their input and influence are critical to the success of our projects. The result: design solutions that meet or surpass client's needs and expectations.

ERO is a collaborative organization. Early in the pre-design process ERO, as directed by City of Edinburg will engage the community and other stakeholders to hear about views, expectations and concerns. Our photo-realistic renders will act as validation of our interpretation of their design expectations.

Programming is the research and decision-making process that identifies the scope of work to be designed. We approach program-

ming as a client management process that is focused on problem seeking which ultimate solution provides a cost-efficient solution for the long-term arrangement, appearance, harmony, functionality and location of buildings or additions. The solution also finds the best way for staff, students and the community to experience, access and use the buildings. The aim of programming is to provide a single, clear roadmap for all project partners to use in successful project delivery.

Additionally, ERO has in-house staff and experience to perform a needs analyses, facility assessments, photo realistic 3D renders, spatial concepts, interior design and structural engineering. Our design team participates in the programming process to ensure as many risks as possible are identified such as site adequacy and costs are as close to actual as possible. Prior to any design ever beginning a clear-cut program is detailed and approved by City of Edinburg.

ERO is experienced at leading the assessment, development and implementation of effective strategies to make a compelling presentation of the evidence of need to engage your community and win its support for a bond proposal. The steps we go through encompass:

- Involvement of interested parties in the definition of the scope of work prior to the design effort for research.
- Establish goals
- Gather and analyze relevant data early in the process so that the design is based upon sound decisions including how the school functions, site considerations and sustainability targets
- Identify applicable codes, standards and risks
- Determine quantitative requirements
- Iteratively review to determine whether the plan remains within budget
- Finalize a plan approved by the client.

ERO is a collaborative organization. Our technology is shared by our partners resulting in Autodesk containing all building systems, quantities and materials as well as all information from various design versions. Navisworks is run to help identify any clashes. We find that when all disciplines are involved throughout the design, particularly early on, the designs become more pragmatic and economical as well as avoiding large design alternations or change orders. It is during these meetings that discussions on quality, timeliness and budget occur.

The client, building occupants, and operation and maintenance personnel re involved to contribute each's understanding of how the building and its systems will work for them once they occupy it. The fundamental challenge of "whole building" design is to understand that all building systems are interdependent and to deliver a building tailored to the people who use it.

INNOVATION

For all ERO projects, the project is scoped through programming. Achieving a project on-time and on-budget is fueled by our practiced innovation. Early decisions affect the quality of outcomes so these elements are revisited at every stage through the development process and refined. Risks critical to cost containment are identified as well as possible. Many risks are classified as known unknowns. It is an iterative, integrated and collaborative process that uses innovation to solve challenges. ERO is superlative at 3D structural modeling. Modelers construct existing buildings, partial structures or proposed buildings in a computer model and evaluate the design for performance and serviceability. To deal with complexity ERO uses 3D finite element modeling to obtain practical and economical solutions. Irregular geometry, large openings in walls or floors, and even concrete crack widths can all be modeled and analyzed for deficiencies or verified against applicable building code. The current conditions and performance of existing structures can be as studied, observed, and investigated.

The interchangeability of Revit 3D models to ERO's 3D structural modeling software packages expedites changes in geometry, load conditions, and detailing. BlueBeam Revu allows collaboration real-time. ERO is fully equipped and power users of the latest BIM 360, rendering and computing technologies. The team uses an extensive integrated IT system to facilitate all design, production, documentation, whether local or long-distance. ERO staff have gained valuable expertise in engaging talented minds to work collaboratively in creating innovative solutions for highly complex, multi-faceted, and often first-of-their-kind projects.

PROBLEM-SOLVING

Our approach to problem-solving begins with problem seeking and asking what-if questions. Problem-solving is a technique used during every phase of the project and is an activity at our weekly design team meetings. Peers ask what-if questions and question whether the design is optimal or can be improved. For example, in order to reduce overall construction costs (and footprint), all Seguin High School academic classrooms were placed under one roof— four stories high. Lack of as-builts for the renovated area was solved by applying the use of a 3D Scanning tool (laser scanner) which produced accurate building systems information faster and less costly than a manual inspection.

TECHNOLOGY FOR ACCURACY AND SPEED

When Autodesk Building Information Modeling (BIM) became available to architects in 2010, we were quick to adopt the new platform seeing the benefits that the new Autodesk Revit software would bring to the firm and to its clients. ERO was one of the first architectural firms in Texas to make the investment and transition from the old way of doing things, via AutoCAD, to the new way, via BIM. BIM has become a powerful tool that has revolutionized the drawing production process. It enables ERO to look at 3D views

of the project, refine the design to make it more efficient, and isolate sections, structures and systems. Our employees are all Autodesk Revit, AutoCAD user. On staff we have some of Texas' few AutoDesk Revit Architecture and AutoDesk Revit Structural Certified Professionals and serve as a testing community.

With BIM 360 utilization on over 40 recent design projects, ERO strengthens workflow in the design, detail, production, coordination and submission processes. All project participants are able to access the design and construction information in a single database to collaborate and efficiently manage all disciplines involved in the process and reduces the likelihood of additional costs.

ERO staff are fully-equipped and are power users of state-of-the-art design and information software and hardware technologies. BIM-based workflow allows all project participants to access the design and construction information in a single database. BIM project success provides the operations and facilities team with tools that enable end-users to analyze space-related data, life-cycle data, preventative maintenance scheduling, and perform cost needs analysis. A BIM-based approach allows ERO and its team members to collaborate and efficiently manage all disciplines involved in the design process. We use Navisworks to identify systems clashes to eliminate design errors and coordinate system performance.

By working on a BIM database all disciplines have the opportunity to make sure that information is accurate and coordinated to reduce the likelihood of additional costs to the end user. Furthermore, our technology facilitates the production of documents, coordination of all drawings and design documents relating to the design and coordinated across disciplines.

We use an extensive, integrated IT system to facilitate all production and documentation work for all types of facility projects. Most design and all construction documents are produced in-house using the latest software applications: Autodesk Revit, AutoCAD and SketchUp. Besides the Microsoft Office Professional Suite and ArchiOffice, many of the ERO computer workstations and notebooks are equipped with Adobe Photoshop CS6 Design Suite software applications for professional graphic design and presentation. ERO uses a 3D printer to produce large physical scale models that help improve communications among owners and stakeholders. Additionally, our structural engineers use technology to improve design accuracy in replicating actual building performance. We are power-users of RISA-3D, RISA-Foot, SAFE 2014 and EnerCalc as well as our own in-house programmed macro-enabled Microsoft Excel spreadsheets to accelerate calculation computations. We perform forensic analysis and model concrete cracks, foundation settlement, vibration of floors and building sway and perform seismic analyses.

Today's environment is different. 3D scans and modeling are not just for something nice to have and fun; they now become the working drawings which make field work so much more accurate and save so much time. We can compare our designs against the contractors' programs and get quicker feedback on possible problems before a single spade of dirt is turned.

ERO's 3D modeling capabilities help ensure that the needs of the owner, for any building type, are possible from the outset and not just done with a guessing game where costly disappointments can occur later in the projects.

QUALITY MANAGEMENT

PROJECT QUALITY MANAGEMENT PLAN

Our Quality Management Plan (CMP) is designed for three key desired outcomes:

- Improving project outcomes by making confident decisions and reducing errors.
- Maintaining one repository for project information so that current information is available to all team members from anywhere and at any time.
- Sharing and managing the development of the design, construction drawings, documents and models for viewing and markup by all team members.

We accomplish these desired outcomes by hosting our Revit 2020 project models and information in a single cloud-based Autodesk BIM 360 Docs platform. This allows the team to easily control and transfer project information from initial design to final construction. Our workflow is centered on three key tenets of operation designed to keep the client, designers and constructor informed and engaged throughout the design and construction processes. These outcomes are: Information Management, Design Review and Document Control.

INFORMATION MANAGEMENT

Information Management keeps the entire team informed and in sync by utilizing a standard and structured approach to document management. Using our BIM 360 Docs platform we can manage and control the sharing and access of documents, models and drawings throughout the project's development in real-time. The following flowchart shows how information is loaded and made available to project parties. (See Fig. 1)

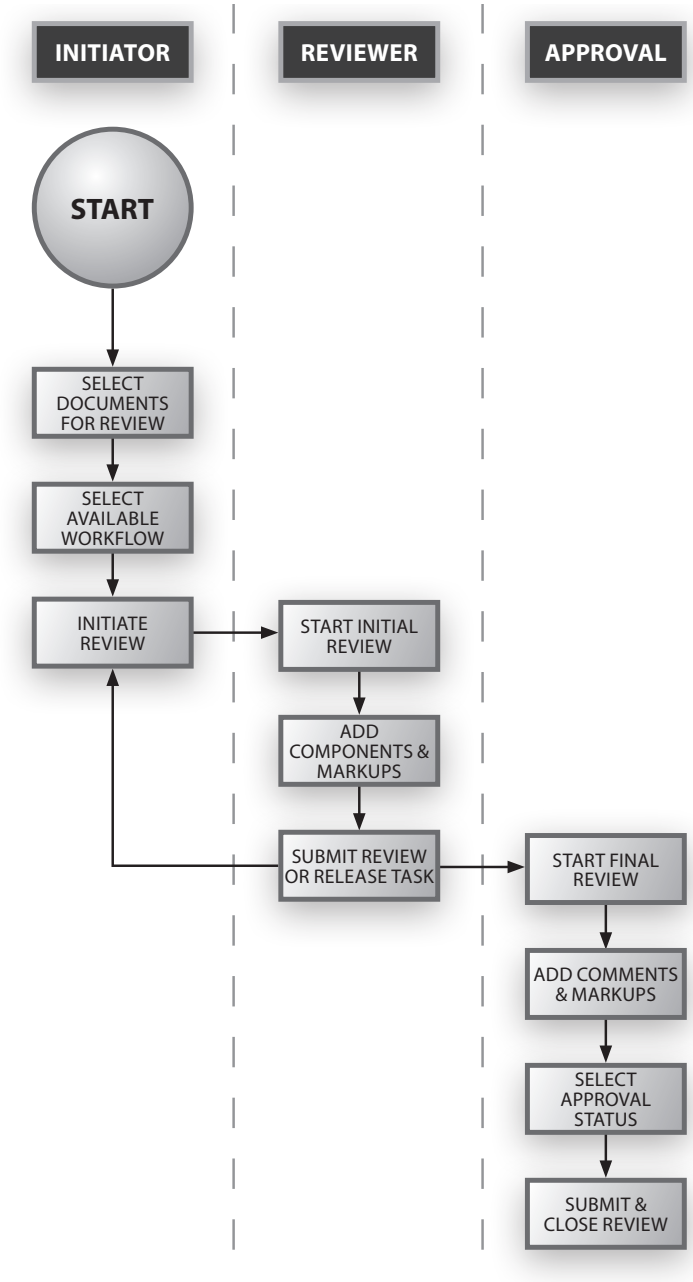

Fig. 1

DESIGN REVIEW

All team members, client, designer and constructor, get real-time access to every 3-D model, drawing and document to ensure that information is accurate and complete prior to the start of construction. With anywhere and anytime access of the platform, individual team members are afforded the opportunity to review and comment utilizing collaborative tools that support viewing, commenting and comparing design versions and revisions in real-time sessions. The following flowchart shows how information is initiated, enabling it to pass to reviewers and through approval. (See Fig. 2)

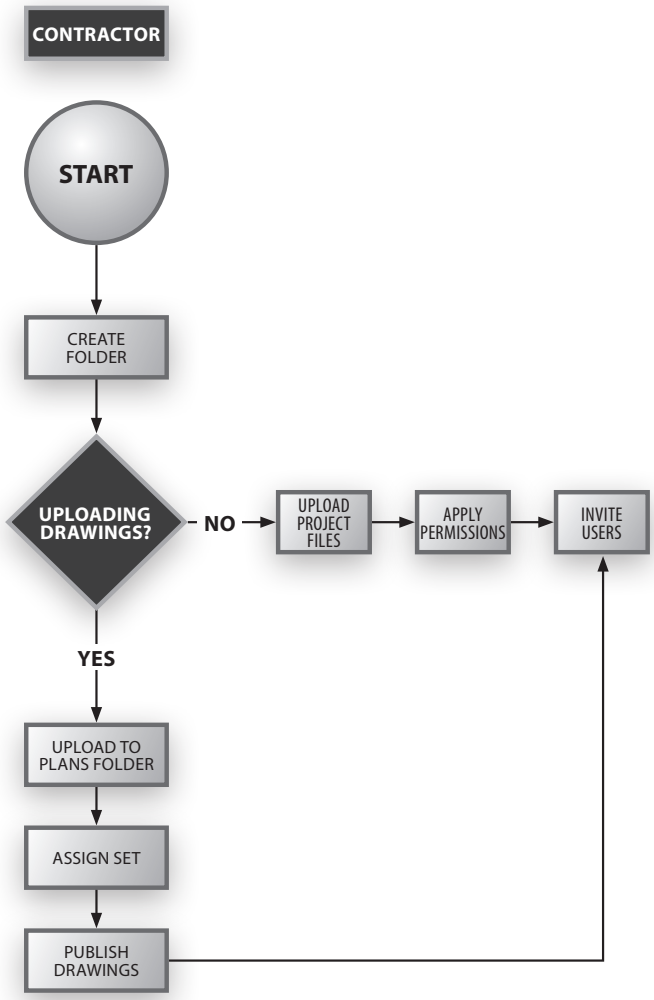

Fig. 2

DOCUMENT CONTROL

Our Autodesk BIM 360 Docs platform improves project controls for communication, visibility, tracking and management of project processes such as Requests for Information (RFIs), Shop Drawing Submittals (Shops), Change Proposal Requests (CPRs), Construction Change Directives (CCDs), etc. to help ensure the flow of information to meet our contractual obligations. The quality management platform will keep team members on-track with a structured approval process, tight permission controls and activity tracking. The following flowchart shows how information moves forward through changes and tracking those changes to the documents. (See Fig. 3)

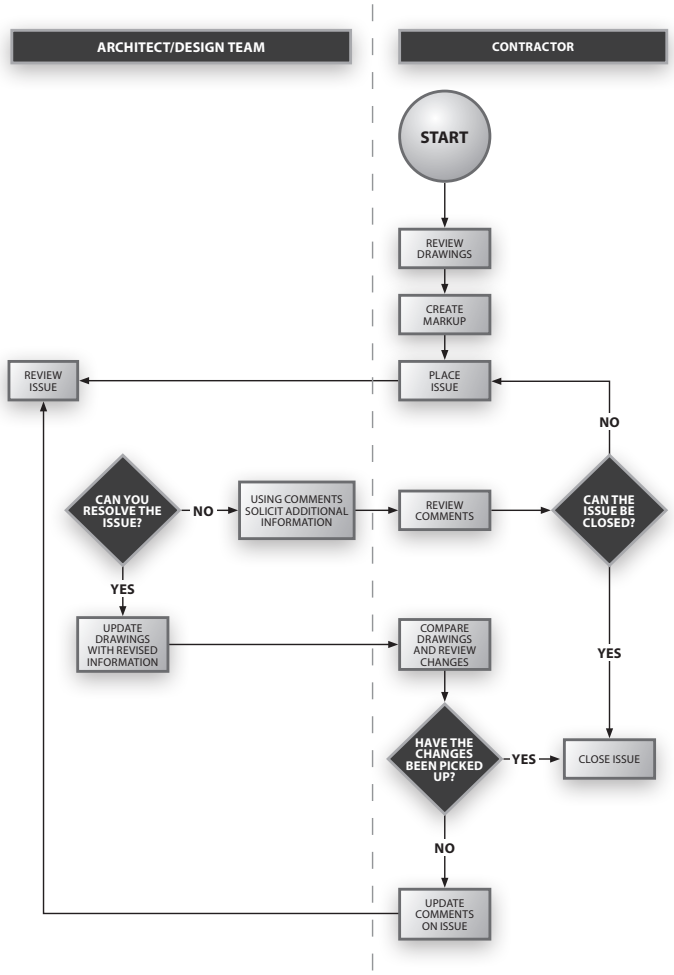

Fig. 3

Our goal is to keep the client, constructors, engineers and architects fully engaged and integrated throughout the entire design and construction process. The QM process is continuous from contract start to construction finish. It is never handed off from one partner to another nor has start and end dates passing from one phase to another. To that end, our documents are available to the client and client representatives, all design partners and for the design-build project to the contractor for whom we work at all times. All parties are encouraged and welcomed to comment at any time throughout the processes. For example, engineers collaborate

during weekly design team meetings and inspectors in the field have tablets available to compare construction documents with the actual construction work. As the architect, ERO is responsible for acknowledging, addressing, tracking and resolving all quality issues brought out through the QM processes.

In addition to the on-going QM process the client is formally engaged in the QM process as delineated in the contract. These formal engagements are generally the milestones and deliverables. The client-approved project schedule provides time for reviews, subsequent alterations and Board approvals to move forward to the next phase.

QUALITY MANAGEMENT PROCESS

A description of the quality management process for design and construction phases Quality Management (QM) is an ongoing process and there is a plan for each phase. Ultimately, the QM program encompasses achieving functional and programmatic expectations and avoidance of project changes during construction. QM becomes an integral part of the development of the project by setting goals and expectations up front and following through with quality reviews. Each of our team members is committed to the QM program and empowered to act in the best interest of the project which results in highly successful projects. The first formal QM phase begins at the project's inception and proceeds through the completion of Conceptual Design.

The second phase follows immediately thereafter and continues at select intermediate submittal stages through the final acceptance of the construction documents. QM concepts are designed to ensure that each discipline and each project phase—from design through construction— are coordinated, complete and technically accurate. Construction documents, when carefully executed, provide for accurate bidding and construction by the design-builder. The QM approach protects the client's financial interests by minimizing the risk of construction cost extras and delays.

Octavio Cantú, AIA, as Project Architect & Senior Project Manager, is the corporate officer for QM Quality Assurance/Quality Control (QA/QC) processes for the ERO team. Octavio manages the QM process and ensure that experienced senior employees provide input, and coordinates input from all project partners and consultants. The staff uses check lists to ensure all parts and tasks of the design process are followed.

PROGRAMMING, DESIGN & CONSTRUCTION ADMINISTRATION PROCESS

ERO seeks guidance from AIA for its project development process including the D200 Checklist and Integrated Design Process as well as following the AIA B101-2017 Architect-Owner contract document. These tasks include:

- Plan, manage and document all project meetings between the client and design team
- Analysis of Facility Program Objectives of scope cost and schedule
- Site and Facilities Visits to review existing conditions
- Schematic Design Phase
  - **Preparation of sufficient "alternative approaches" or "design scenarios" for client review**
  - **Submittal of client approved design documents for review**
  - **Submittal of probable cost estimates**
  - **Coordination with client's selected Construction Manager (if CMAR delivery method is chosen)**
  - **Respond in writing to all client-provided review comments**
- Design Development Phase
  - **Continuation of SD into DD documentation and design refinement**
  - **Submittal of design documents and preliminary specifications for review**
  - **Coordination with client's Construction Manager to assist in developing the Guaranteed Maximum Price (GMP)**
  - **Submittal of probable cost estimates to review against the GMP**
  - **Respond in writing to all client-provided review comments**
- Construction Document Phase
  - **60% complete construction documents for client review, and design team coordination**
  - **Coordination with Construction Manager and client for determination of construction phasing**
  - **Submittal of probable cost estimates**
  - **100% complete construction documents for client review, and design team coordination**
  - **Submittal of probable cost estimates**
  - **Respond in writing to all client-provided review comments**
  - **Finalize Bidding Documents and any necessary Addenda (if CSP delivery method)**
- Bidding and Proposal Phase (if CSP delivery method is used instead of CMAR)
- Assist client and Construction Manager by receiving and recording requests for bid and request for proposal documents.
- Assist in issuance of bid and RFP documents
- Preparation and accounting of addenda
- Attending pre-bid and pre-proposal conferences
- Respond to any inquiries and prepare needed documentation for clarification
- Assist in preparing and awarding multiple contracts.

PROJECT SCHEDULING

ERO is committed to staying within budgets by providing a well-thought out schedule with very specific tasks for staff and consultants, with submission requirements at set milestones. ERO develops a project schedule that responds to the design and construction demands, in consultation with all parties. Schedules indicate the start and end dates for each project phase and construction start and completion. Scheduling disruptions can occur during milestone reviews or with a change of project parameters. More likely, a delay occurs during construction with adverse weather or physical challenges. We anticipate and streamline this process as much as possible.

At the end of each phase, the schedule is reviewed and reconciled. ERO, historically, meets the work schedule during design by closely coordinating with the client (planning, designing, reviewing) and during construction by working closely with the general contractor (permitting, documents).

As we develop the schedule, we will seek input from the entire team to establish early deliverables during the schematic design, design development and construction document phases. For several recent projects, ERO maintained design schedules by providing advanced technology and manpower necessary to complete the construction documents within the scheduled time. During construction, ERO worked closely with the contractor to ensure that submittals, request for information, and general construction questions were answered in a timely manner.

As with the design schedule, construction schedules require constant review. Schedule compliance assessment is an integral part of every construction coordination meeting with construction staff, and detailed recovery plans are required from the contractor if "schedule slippage" is detected. All of this encompasses a collective effort to recognize problems early and implement corrective measures before critical construction delays occur. ERO makes substantial efforts to mitigate the risks of forces beyond its control and attempts to prevent avoidable delays because every aspect of the construction process contributes to the timely completion of construction. ERO's primary measure of schedule control is the vigilant and critical evaluation of the critical path and tracing of schedule information in the records log. We have delivered virtually every project on time that we programmed. Due to ERO's experience working with government projects, we have extensive experience in innovatively accelerating schedules.

COST CONTROL

Performing work within a specified budget requires vigilant cost control measures that begin with a clear understanding of the project scope. Communication with all stakeholders is critical during the initial phases of design to gain a thorough understanding of the scope and establishing clear programming parameters.

ERO estimates the project cost repeatedly throughout the design process. ERO updates the cost estimates five times; but at a minimum, estimates are developed at the completion of schematic documents, design documents and at 95% of the construction documents.

From the performance perspective, quality assurance is the first step in controlling costs. If personnel are functioning on schedule then delays and the attendant claims and change orders are minimized. ERO meets weekly to review progress and discuss any conditions that may adversely affect the budget. Members also bring cost saving design concepts forward for consideration. Together, we analyze systems and develop alternatives to meet the budget, program and requirements without diminishing the design quality and parameters. Cost-cutting alterations such as different materials, changing the footprint or eliminating such amenities such as a "porte cochere" are considered.

If something occurs of an uncontrollable nature, the project architect sits down with the client and options are considered and formally the scope may be changed. REdgardless, any change to the budget receives full consensus and client approval before implementation.

Another cost control strategy is establishing correct and accurate estimates at the start of the project to set realistic expectations for the client. Currently we are experiencing fast growth which drives prices up and causes labor shortages. ERO tends to set cost estimates at the higher end of the cost range to avoid situations where the project falls outside of the client's budget. When estimating the cost for a project there are always unknowns. These uncertainties are risks to the project. The estimator may be aware of some them based on past experience and can estimate the probable costs. The estimated costs are referred to by cost estimators as cost contingency

ERO project budgets include escalation factors that are typically within 2–5% of the actual cost of the project when bid. This is a record of which we are proud. ERO develops estimates from detailed quantity takeoffs utilizing unit costs established from previous projects. Owners are always updated at the end of each phase of work. ERO strives to have bids submitted slightly lower than our anticipated probable cost of construction.

COST ESTIMATING

From a programming perspective and to mitigate the unpredictable costs of construction, ERO maintains a database of regional costs based on actual bids. We maintain relationships with area contractors, vendors and suppliers to obtain current costs. We track marketplace trends and understand the variability and relative supply and demand affecting materials and supplies purchase price.

We develop a document that describes the scope basis, pricing basis, methods, qualifications, assumptions, inclusions, and exclusions. The information is stored in our databases for reference, review and reuse. We refer to RSMeans' published city cost index. We uses UniFormat and Cost Link in the estimating process. Uniformat estimating applies unit-cost data to building-system and component site elements. This systems approach uses a hierarchical structure of cost elements, beginning at Level 1 with basic systems, such as Substructure, Exterior Enclosure, and Interior Construction, and proceeding to successively more detailed subdivisions of these systems at Levels 2–5. The resulting levels of detail not only serve to structure cost information but also facilitate estimates to whatever level of detail the design team can provide as the project is developed through the design submission phases.

SPECIFICATIONS DEVELOPMENT

ERO design team develops specifications after evaluating building products and systems selected by the client and the team to verify that selections are appropriate to the design. Through collaboration, options may be suggested that might be more effective in achieving the program. Product data and contacts with building products are included in the specifications. As we develop the specifications for the building, we typically use a commercial master specification, but our office also has a experienced-developed suite of "office masters" that we developed for various building types. We have the skill to develop a custom specification, if needed. We adhere to the principles of specifying established by CSI and as published in various practice guides, and we follow the "CSI Format" with particular attention to MasterFormat and SectionFormat which helps us to develop specification which are consistent and easy to use.

CONSTRUCTION DOCUMENT PRODUCTION

ERO strives to provide products that meet or exceed the client's design requirements, and to see that these are cost effective and concise. Document coordination is performed at every project milestone and achieved through several established processes, using Revit A360 models from each design discipline. Navisworks is employed for clash detection.

BIDDING PREPARATION

Following the approval of the Construction Documents, ERO can assist the City of Edinburg in obtaining competitive bids, confirming responsiveness of bids, determining the successful bid, recommending for contract award to the Board of Trustees and assisting with the preparation of contracts for construction.

The bidding phase of the project involves intense communication between ERO and prospective bidders to provide for accurate bidding of the project. This communication allows us to incorporate any last minute or outstanding issues into the contract documents through addenda; avoiding change orders and excessive costs during the construction phase. After bids are received, ERO evaluates the bid amounts in comparison with the project budget, evaluates the prospective contractor's qualifications and reports to the client with recommendations.

ERO is able to assist the Purchasing Department in establishing and implementing procedures for the bidding process including the assistance in issuance of addenda, pre-bid conferences, the bids opening and the tabulation sheet (verification of submittals).

CONTRACTOR SELECTION

If delivery method is competitive sealed proposal, ERO can assist in publicly opening sealed proposals, reading aloud the names and monetary proposals made by the offerors and documenting the information for the district. ERO can assist in the ranking of the offerors according to the best value to the City of Edinburg based on the city's ranking criteria and the weighted value for those criteria as cited in the Request For Proposal. ERO can assist in negotiating a contract with the selected offeror to provide the scope, schedule and price satisfying the District within the allowable 45 days.

ERO, working with the Procurement Director, City staff, and legal department, is able to assist in the preparation and coordination of all construction contract documents.

CONSTRUCTION ADMINISTRATION

ERO maintains in-house construction administration (CA) staff to provide consistency and facilitate the CA process. The CA team is responsible for coordinating continuous communications utilizing in-person meetings, telephone, email and virtual online meetings during construction, including documenting, photography, tracking and responding to RFIs and Submittals, as well as reviewing applications for payment and field observation reports. The CA Team holds a pre-construction meeting to kick off the construction. Then we hold weekly construction meetings.

We communicate to our Owner directly and document each of our field visits (once per week minimum) with observation reports that include photographs, plans for any on-site clarifications, document conversations and decisions and document the overall

progress of the work. More importantly, we are there at every concrete pour, before any cover ups, to review mockups, at pre-installation meetings with sub-contractors etc. All these processes are extremely important in not only ensuring we have a well-built building according to our documents, but so the project also moves along at a good and proper pace.

Our Team's key individuals, including the Project Manager, attend every construction meeting and walk the project prior to the meeting with the superintendent in order to review any issues, verify quality of the workmanship and that the project is being built according to the District's standards and the project's contract documents. Frequently all consultants are required to attend the construction meetings.

Offsite, we hold in-house weekly construction meetings. We avoid construction claims by brainstorming risks and mitigation strategies and monitoring progress. We mitigate claims costs by addressing problems swiftly, negotiating fair prices for changes and providing continuous, accurate documentation. We facilitate construction by managing the flow of information and reducing the potential of "dropped balls." We save time by monitoring progress and schedules and working cooperatively with the general contractor. Our CA Manager stays in contact with the Owner's Construction Manager and provides written notification and reports concerning the progress of construction. Any contractor slippages trigger a plan from the contractor for getting the project back on schedule.

It is our goal to produce plans so clear that RFIs will not be requested. However, each and every information request is logged electronically in the project file for reference and is accessible at all times by all project partners. The Construction Administrator provides a formal response after consultation with the Project Manager and appropriate design team member(s). The target is a 24-hour turn around, when possible. An RFI will provide the basis of the determination and any code references when deemed appropriate and an ASI includes the reasons for any decisions made in addition to instructions. The responses (including contract amendments) are posted to Owner InSite for 24/7 availability.

CA maintains copious notations in record logs on all observations during inspection as the basis for change orders, accuracy of construction documents, and protection from claims. The process for identifying, documenting and reconciling a "non-conforming" item is as follows:

- Thorough observation of the actual construction site
- Define any items observed as "non-conforming"
- Record information into the record log
- Notify the manager on the site
- Draft a letter to the contractor noting the non-conformity and it remedy. Send the letter to the contractor and copy the Owner. The letter stipulates what is require to conform and sets s timeframe for compliance. The letter is uploaded to Owner Insight.
- Continue to follow up through additional site observation
- Close-out documenting the record log.

NEW HIDALGO COUNTY COURTHOUSE
County of Hidalgo

PROCESS CONSTRUCTION DOCUMENTS

In consultation with the Purchasing Department, end-user department and Construction Managers, the ERO Project Manager establishes and implements procedures for processing and approving shop drawings, product data, samples, and other submittals from the contractors (e.g. including contracts, specifications, schedules, correspondence, meeting, minutes, catalog data, directives, change orders, etc.). We establish and maintain a submittal log to ensure contractor compliance with the contract documents.

We provide administration, management and related services necessary to coordinate the construction activities of the contractors with each other and with City of Edinburg's designated Contract Manager, Construction Manager or representative(s).

MONITOR CONSTRUCTION PROGRESS

We observe the construction progress and report deviations from the schedule that might delay project completion. We consult with contractors and City of Edinburg, the ERO Project Manager and CA representatives develop and implement corrective actions necessary to meet the project schedule.

CONTROL CONSTRUCTION QUALITY

We monitor and inspect all work in progress to ensure the quality of the work and compliance with the contract documents. We document and report all deficiencies and make recommendations for corrective actions.

PROCESS APPLICATIONS FOR PAYMENT

We coordinate with City of Edinburg to develop and implement a procedure for the review and processing of contractor payment applications.

PROJECT MEETINGS

We participate in meetings with consultation with City of Edinburg and applicable parties, conduct meetings as necessary at the job site to discuss job progress, problem resolution, and decision making.

PROCESS CHANGE ORDERS

In consultation with the Procurement Director (Contract Manager), the ERO Project Manager develops and implements a system for review and processing of change orders.

COORDINATE INSPECTIONS AND TESTING

In consultation with City of Edinburg (representatives), we coordinate the selection of independent inspection and testing agencies, review inspection and testing reports, and make recommendations rEdgarding the results of inspections and testing activities.

WARRANTY AND CLOSE OUT

Project closeout begins as soon as a construction contract is signed. All projects contracts, communications, documents, reports and logs are digitally stored and available to the client, Project Team and Contractor. Some of the more common and very important activities such as RFIs, ASIs, Submittals and Change Proposals have specific processes to track, log and store them. The project modification process is a formal one. The contractor is provided a list of all documents that will be required, via email and web file transfers, allowing the contractor to begin work compiling and completing all required documentation and managed with Owner InSite and New Forma project management tools.

As a part of Warranty we prepare an O & M manual for the client that contains all product and warranty information for reference. We prepare a comprehensive list of warranted products with the warranty period, warranty supplier, key contact and contact information listed, also. We review all operations and maintenance manuals as well as copies of warranties for completeness and compliance with the contract requirements. Between 10–11 months after the warranty period begins we conduct an inspection to identify any non-compliant performance. We document all findings and assist in the remediation process to achieve compliance in a satisfactory way.

Over the contract period, ERO is willing and able to expedite design services and construction administration for the projects. It is not anticipated that at any time ERO will need to use supplemental production in order to meet schedule demands. As stated earlier, ERO uses technology to the maximum implementation level that enables rapid and error-free designs. That same technology capability also checks for design clashes and permits rapid document changes, if required by the client.

OTHER ARCHITECTURAL SERVICES

MASTER PLANNING, BOND PLANNING AND FACILITY ASSESSMENTS

Development of facility planning begins with defining the theory, principles and techniques related to the building's intended use. Establishing a timely and practical master plan should reflect a systematic process in planning. Robert Sands, with 29 years of experience, provides facilities assessments, master planning, and even bond planning services..

Tool Box:

- Site Analysis
- Facility Needs Assessments
- City Visioning
- City Goals and Specifications
- Short- & Long-term Facilities Master Plan
- Bond Referendum Workbook
- Bond Election Services

The elements of the process: strategic analysis, strategic choice and strategy implementation. The application of a strategic process attempts to utilize best practices.

Tool Box:

- Discovery and Data Analysis
- Organizational Review and Study
- Re-engineering Strategy
- Compliance Study
- Strategic Plan.

ERO believes that it is paramount to plan early and develop a step-by-step strategic bond referendum program to win broad-based community support sooner than later to pass a bond referendum. ERO and our principals have managed bond referendums with a proven success rate, all due to well-organized early bond planning: from facility programming to community engagement. We assist with the development of facility planning and programming, and all community engagement data and marketing tools, as well as help coordinate and implement the bond campaign. We have had success even when the community had previously rejected bond referenda.

Tool Box:

- Bond Committee Facilitation
- Bond Planning
- Programming and Cost Estimating
- Design, Renderings & Materials
- Community Engagement Strategy
- Implementation of Bond Plan.
- Planning and Site Analysis

Planning and site analysis are the informational foundation on which successful projects are built. Facility assessments and site analysis study building and location conditions to establish the data Owners need to understand the physical condition and adequacy of the buildings and site to serve the needs of users and the community.

ERO adds value to this process with our vast design and construction experiences and knowledge of building and other codes. Our skilled staff uses such technology as the 3D laser scanner to determine what systems are hidden behind walls and assess the condition of the structure. We use model analysis to replicate real-world building performance. We compare costs for repair and renovation against new construction. The facility and site data allows problems to be defined, creates baselines for master planning and ensures dollars are optimized to the extent possible.

Programming is the research and decision-making process that identifies the scope of work to be designed. We approach programming as an Owner management process that is focused on problem seeking which ultimate solution provides a cost-efficient solution for the long-term arrangement, appearance, harmony, functionality and location of buildings or additions that finds the best way for staff, students and the community to experience, access and use the buildings. ERO has a successful record of programming whether district-wide or a single campus across Texas. The aim of programming is to provide a roadmap for on-target, on-budget and on-time design.

ERO is experienced at leading the assessment, development and implementation of effective strategies to make a compelling presentation of the evidence of need to engage your community and win its support for a bond proposal. The steps we go through encompass:

- **Involvement of interested parties in the definition of the scope of work prior to the design effort for research**
- **Establish goals**
- **Gather and analyze relevant data early in the process so that the design is based upon sound decisions including how the building functions, site considerations and sustainability targets**
- **Identify applicable codes, standards and risks**
- **Determine quantative requirements**
- **Iteratively review to determine whether the plan remains within budget**
- **Finalize a plan approved by the Owner**

3D LASER SCANNING

The 3D laser scanner is an important advancement for the modern technology-assisted architectural and engineering design processes. The laser scan provides a non-contact, faster, higher-accuracy, practical and cost-effective technique to produce 3D point cloud information on existing structures that is easy to retrieve. Heretofore, manual reporting and interpretation of such data have been labor intensive and subject to personal judgment and experience, and prone to error.

With 3D laser scanners, the x-y-z coordinates of the spatial data are collected in the time it takes a laser beam to hit the surface and return. The 3D point cloud data sets are comprised of a significant number of data points that are unstructured and densely and non-uniformly distributed. The data create high resolution images, either in gray-scale or color; color for reflex intensity information. Computer vision algorithms are used to analyze the data to recreate building systems or assess conditions accurately with identification of structural or other such engineering condition indicators as cracks, displacements, and deflected shapes point. The data sets facilitate historic preservation, as-built documentation, and direct query of 3-dimensional spatial data. The post processing of the data sets develops architectural drawings and building models as needed for the design process.

SUSTAINABILITY

ERO applies sustainability principals in all of its work. We recently completed the first LEED Gold education facility south of San Antonio – the new Texas State Technology College University Center in Harlingen. This unique facility was awarded the Associated Builders and Contractor's Excellence in Construction and the Engineering News Record Excellence in Design. Other award-winning sustainable designs include EL Furr High School, (LEED Silver) in Houston, Donna 3D Academy in Donna, Zapata County Museum of History and Zapata County Educational Technology Center.

Our building sustainability measures are intended to lower energy; water; waste disposal; emissions; operations and maintenance costs; and construction waste, while increasing the productivity of the building and health of building occupants. ERO has extensive experience including incorporating strategies into our designs such as:

- Building orientation for increasing natural lighting, maximizing structure angles in harsh environments to avoid extraordinary heating; gathering solar energy; and using prevailing winds for cooling
- Landscaping features to create natural cooling
- Passive systems to reduce energy consumption (daylighting, natural ventilation, and solar energy)
- LED lighting (reduce energy and improve health)
- Energy-efficient MEP systems (reduce energy consumption)
- Incorporating wall systems for thermal mass and fenestrations (windows, glass, and doors)
- Construction materials such as low-VOC paint, paperless gypsum wallboard, recycled-content insulation, galvanized metal studs, finishes without formaldehyde, brick or block and finishes of recycled materials
- Low water consumption landscaping
- Low-flow restroom systems
- Building envelops such as high EV concrete to remove heat passively or air barriers that assist air permeability and reduce uncontrolled air movement through the envelope
- Highly reflective roofing systems.

CODE COMPLIANCE

As a full service architectural/engineering firm we constantly encounter Federal, State, and Local rules and regulations in order to earn plan approval and construction acceptance. We work with cities for zoning, building permitting, inspecting and record keeping. We assist building owners with complying with energy consumption, energy efficiency and catastrophic area wind standards the State of Texas promulgates. ERO understands the goals of the Federal government requirements for complying with the Davis-Bacon Act for remuneration, Small Business goals for inclusion requirements or OSHA for workplace safety. We use third-party design standards, sometimes adopted by governments, whether as International Commercial Code, Whole Building Design Guide or Texas Accessibility.

Although occurring during every phase, a very intensive building code checking process covers every building code related items and details during the design document phase. Design documents are checked rigorously against locally- adopted building codes and design criteria related to circulation, energy, lighting, and others.

The building code review process continues by revising previous building design data and checking design compliance at floor and space level. The building area, height and the number of stories, affect the fire protection systems required, means of egress and so on. Floor areas determine occupant loads for each floor level and the number of required exits for each floor and the travel distance between exits. The data for each space, defined during the programming phase, is applied and tested through room-by-room layouts that suggest furniture arrangements and illustrate reflected ceiling plans. This is done to initiate coordination with mechanical and electrical disciplines. These data include but are not limited to:

- Occupancy and construction type of all spaces
- Construction details that reflect the relation and connection between building materials and components
- Layout and height of the building
- Number, height, and area of floors
- Circulation routes including location; type and size of elevators; and stairs and ramps
- Intensive occupant load analysis
- Number, type, and size of exit doors
- Travel distances to exit doors and areas of refugee
- Locations, sizes and types of openings in exterior and interior walls
- Level of fire hazards among adjacent spaces
- Topological information (i.e. spatial relations between building components such as separation, adjacency, connectivity, and intersection)
- Zoning Ordinances and ADA related items.

PERMITTING

ERO has completed more than 325 public sector projects engendering extensive governmental permitting experiences. These projects include new construction, additions, renovations, rehabilitation, code compliance, improvements, re-roofing, and repairs. We have worked in dense urban environments where staging is required and safety considerations are heightened. We have worked in occupied buildings where the users and visitors need to be protected from noise, pollution, physical dangers and construction scheduling interrupting operations. We accelerate project schedules to minimize the time the public is exposed to construction conditions and meet opening events.

Value Engineering is a creative, organized effort directed at analyzing designed building features, systems, equipment, and material selections for achieving essential functions at the lowest life-cycle cost consistent with required performance, quality, reliability, and

safety. Value engineering is a systematic method to improve the "value" of the project by using an examination of function. Essentially, value is the ratio of function to cost. Value is manipulated by either improving the function or reducing the cost.

VALUE ENGINEERING

Value engineering is a structured technique commonly used in project management. Some methods used in value engineering include reducing production time, reducing expenses, using existing resources more efficiently, and improving product quality. As project managers, we seek to maintain the quality and aesthetics of the project while containing or minimizing costs. As structural engineers seek to reduce costs, minimize the schedule, or increasing design economy. When applied to the construction process, value engineering has enormous benefit for developers. We work with local governments to gain zoning approval; zoning compliance; health and safety permitting; water permitting; utility permitting; and inspection for all of our public-sector projects. We work with the State of Texas on transportation, environmental, energy and such special regulations as wind hazard permits. We seek federal permits for such activities as 404 for Discharge of Dredge Material or Fill or modifications to federal public works and military bases.

OUR PROGRAMMING, DESIGN AND CONSTRUCTION ADMINISTRATION PROCESS

- Analysis of Facility Program Objectives of scope cost and schedule
- Site and Facilities Visits to review existing conditions
- Schematic Design Phase
- Preparation of sufficient "alternative approaches" or "design scenarios" for Owner review
- Submittal of Owner approved design documents for review
- Submittal of probable cost estimates
- Coordination with Owner's selected Construction Manager (if CMAR delivery method is chosen)
- Respond in writing to all Owner -provided review comments
- Design Development Phase
- Continuation of SD into DD documentation and design refinement
- Submittal of design documents and preliminary specifications for review
- Coordination with Owner's Construction Manager to assist in developing the Guaranteed Maximum Price (GMP)
- Submittal of probable cost estimates to review against the GMP
- Respond in writing to all Owner-provided review comments
- Construction Document Phase
- 60% complete construction documents for Owner review, and design team coordination
- Coordination with Construction Manager & Owner for determination of construction phasing
- Submittal of probable cost estimates
- 100% complete construction documents for Owner review, and design team coordination
- Submittal of probable cost estimates
- Respond in writing to all Owner-provided review comments
- Finalize Bidding Documents and any necessary Addenda (if CSP delivery method)
- Bidding and Proposal Phase (if CSP delivery method is used instead of CMAR)
- Assist Owner and Construction Manager by receiving and recording requests for bid and request for proposal documents.
- Assist in issuance of bid and RFP documents
- Preparation and accounting of addenda
- Attending pre-bid and pre-proposal conferences
- Respond to any inquiries and prepare needed documentation for clarification
- Assist in preparing and awarding multiple contracts.

Project closeout begins as soon as construction begins. All incoming documents, such as RFIs, Submittals and Change Proposals, are tracked, logged and stored digitally in Owner Insite and our backed up in our data center. Project modifications are documented and processed and the contractor is provided a list of all documents that will be required, via email and web file transfers, allowing contractor to begin work on compiling and completing all required documentation managed with Owner Insite and A360. SharePoint, Microsoft Project, and Deltek Vision manage the project.

ERO's methodology and hierarchy of our projects is centered on a strong and ongoing collaborative effort among the City's staff representatives and all design team members and partners, led by Octavio Cantú and Edgar Villanueva. This team has the experience needed for the design of on-call projects. ERO is comprised of a capable, best-in-class team that emphasizes responsiveness, creativity, community collaboration, innovation and performance that works its way down the chain of command from the project architect to the project manager and the design and production team; along with our consultants. ERO has the flexibility and capacity to assign part-time staff to Edinburg projects that may be smaller in scale and scope.

Our firm's government sector focus has given us a deep understanding of the City of Edinburg's needs and gives us the expertise needed when helping develop a strategy for your on-call projects. All design team members are kept informed of progress at weekly meetings. The meetings serve as a forum for sharing ideas and building on design concepts. Issues are discussed and resolved through collaboration. The meetings assist in keeping lines of communications open between the project team displayed below and with City staff and stakeholders.

CSI, CDT, AIA, NCARB–PROJECT ARCHITECT & SENIOR PROJECT MANAGER

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Since 2008/Since 1996
Licensing: TBAE #20909
Education: B. Environmental Architecture–Texas A&M University

"I ensure ERO designs satisfy budget, owner's program requirements, end user needs and aesthetically enhance the community."

Octavio is a foremost expert in design and project management who adds elements of community into his work. He is both a principal and the chief operating officer for ERO. With more than 20 years of experience, his projects reveal his versatility. Octavio is adept at working within owners' budget and program requirements while incorporating cultural references into a building's design. He has led complex commercial and apartment home projects, along with an extensive list of city and government projects. Octavio enjoys overcoming project challenges while working with clients during the construction and facility improvement process.

PROJECTS

City of Edinburg
- New Police Department Training Facility
- New Arts, Cultural and Events Center
- New Parking Garage and Retail Center

Hidalgo County
- Jail Expansion Feasibility Study
- New Courthouse Replacement with Detention Center
- New Courthouse Master Plan
- New Bio-Safety Testing Laboratory
- Precinct 3 New Community Resource Center and Healthcare Center
- New Elections Department Expansion Building
- Precinct 4 New Mechanics Shop
- Precinct 4 New Multi-Purpose Facility
- Precinct 2 New Vehicle Maintenance and Admin Buildings

Brownsville Public Utilities Board
- Annex Building
- Service Yard
- Administrative Building Renovation

City of McAllen
- McAllen Performing Arts Center
- Waterline Maintenance and Meter Reading Facility

City of Mercedes
- New Police Department Building

City of Pharr
- City Hall First and Second Floor Renovation
- New Events Center

City of Port Isabel
- Visitor and Events Center

City of San Juan
- New City Hall/ Transit Terminal Building
- New Main Fire Station
- North Park and Recreation Center
- Downtown Revitalization Master Plan

City of Weslaco
- New Central Fire Station
- New Police Station with Municipal/ Judicial Court

County of Zapata
- New Museum of History
- New Technical and Advanced Education Center

Town of Combes
- Recreational Community Center

EMPLOYMENT

- Present: ERO, Principal and COO
- Oct 2005–Oct 2008: Jacobs Engineering Group, PM
- Nov 1997–Sep 2005: PBK Architects and Engineers, PM

PROFESSIONAL ASSOCIATIONS

- AIA Council of Education Facility Planners
- AIA, Texas Chapter
- AIA, Lower Rio Grande Valley Chapter

EDGAR VILLANUEVA

AA–PROJECT MANAGER

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Since 2015/Since 2012
Licensing: Associate Architect
Education: B. Architecture - University of Texas at San Antonio, M. Information Technology - UTRGV

"I serve as the client's right hand to make our drawings on paper into a built reality."

Edgar Villanueva, an associate architect, is a design and visualization specialist for ERO. Edgar has more than five years of experience in design and specializes in 3D design and visualization for architectural and interior design. Through collaboration with the design and production team he provides leadership in the production of the highest quality design studies and design visualizations possible. Villanueva's exceptional software skills allow him to rapidly test a variety of possible concepts using Rhino/Grasshopper, Sketch Up, 3ds Max, Revit, and Adobe Creative Studio. His IT background facilitates designing directly in 3D and working with scripts to customize design processes for the team. Since his arrival, Villanueva has contributed to every major project ERO is producing including 21st century high schools, performing arts centers, university facilities, courthouses and schematics for urban planning for community economic development.

JUAN J. CANTU

LEED AP® BD+C–PROJECT MANAGER

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Currently and 2009–2015/Since 2009

Licensing: TBAE 2020 - #28594; OK BA #a7489; NCARB Certificate 2020 - #97616

Education: B. Architecture–UT San Antonio

"I create public buildings that represent an institution's and community's unique culture that positively impacts the experience of end users."

Juan believes in creating buildings that represent owner and their community's unique culture in positively impacting users. Juan is a senior project manager and architect for ERO. He has more than 15 years of experience in architectural design and conceptualization. Juan has been leading production teams for over 11 years and acts as ERO's building information modeling coordinator throughout the design and construction process. Implementing company standards for quality control and project delivery are among Juan's strengths.

ROBERT PRUNEDA

RID, NCIDQ–DESIGN LEAD

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Since 2011/Since 2011
Licensing: RID: 12566; NCIDQ: 35208
Education: M. Architecture, University of Idaho; B. Architecture, University of Idaho

"I like to create modern scholastic environments that provide learner-centric environments empowering students to innovate and problem solve."

Roberto, blends artistry with technical expertise in bringing out the best in modern design and visuals. He leads design and visualization efforts for ERO. He excels in 3D visualization, interior, -furniture, fixture, and equipment design. For ERO's government designs, Roberto believes in empowering users via modern designs that provide innovative and accessible spaces. He strives to use space efficiencies and reduce footprint costs in his interior design. A thorough researcher, Roberto's designs reach high aesthetic standards while reflecting the culture and values of local communities into each design, respecting their land, people, and history.

MANNY ZAMORA

AA–PRODUCTION MANAGER

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Since 2013/Since 2003
Licensing: Associate Architect
Education: Masters of Architecture (5-year program)–2003, Texas Tech University

"I leverage automation to provide drawings and documents that answer all construction questions before they are asked."

Manuel Zamora is an associate architect at ERO. Zamora is serving on the architecture team for design and production. He has more than 20 years of experience in all facets of the architectural field. His forte is 3D visualization, design and modeling in A 360. Zamora is a power-user of Autodesk and Revit 3D BIM. He creates databases in BIM for management of costs estimates, materials, life cycle costs and schedules. Zamora's success is founded in his critical thinking and problem solving. Being a self-starter, Zamora elected to serve as an adjunct instructor for 3D visualization and Revit BIM for South Texas College from 2009 to 2011. Zamora is a NCARB candidate having completed his Intern Develop Program.

ALBERT G. CHRONIS

AA–CONSTRUCTION ADMINISTRATION MANAGER

Assigned to City of Edinburg Projects

ERO Tenure/Experience: Since 2007/Since 1999
Licensing: Architectural Associate
Education: B.S. Architecture, UT San Antonio;
Associates Computer Drafting & Design, TSTC Harlingen

"My experience in the construction industry has prepared me to fully understand the importance of the relationship between Architect and Contractor on a project, and how true Teamwork transfers to a successful project to a client."

Albert is Construction Administration Manager for ERO Architects with more than twenty-two years of experience in the Architecture and Construction industry. He is well-versed in Architectural Design and Construction Administration. Software experience in Revit Architecture 2022 and AutoCad 2022. His experience with both construction operations, performance, and quality control, along with architectural design, construction drawings, serve for optimal results from design to construction. His experience with nine years in construction allows him to understand the importance in the relationship between Architect and Contractor. Albert is well respected by his colleagues due to his team approach and communication skills. He is always available to answer questions from the owner and his consultants.

TOTAL SQUARE FEET

77,196

BUDGET

$15,259,933

SHORT DESCRIPTION OF PROJECT

The four-story annex Building houses administrative, engineering and customer services offices. Also, it contains the entire BPUB energy control center and pump stations management in a Risk Category IV Essential Facility. ERO incorporated a high-performance insulated concrete block wall system for its impact resistant properties. The material is durable, healthy, and energy efficient. It minimizes the need for wood and provides a cost-neutral way to build green. The thermal performance is about four times that of ordinary insulation.

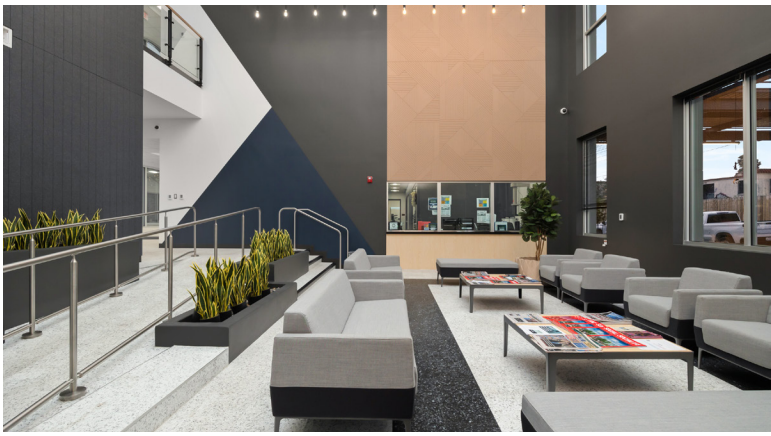
City of San Juan / 709 S. Nebraska Ave, San Juan, TX 78589 / Ben Arjona, City Manager / 956.223.2206

TOTAL SQUARE FEET

30,000



BUDGET

$7,000,000

SHORT DESCRIPTION OF PROJECT

The new City Hall and Transit Terminal will relate to the community by means of the construction of a U-shaped block that gives front to the terminal entry on Nebraska Avenue and towards 6th Street an interior receiving façade with an inner courtyard that naturally achieves passive heating and cooling design strategies. The aesthetic of the architecture weaves the community's history, culture, and land into the fabric of the building's design. It will house multiple city departments along with a coffee shop for employee and community service.

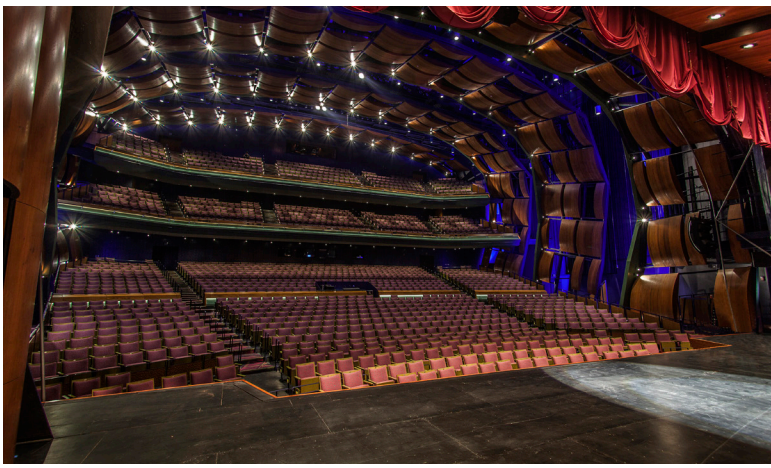
93,741

BUDGET

$44,823,533

SHORT DESCRIPTION OF PROJECT

ERO drew inspiration for the world-class 1,828-seat theater from McAllen. The faceted exterior walls mimic the woven trunks of native palm trees. The lobby is the vibrant blue of the Indigo Bunting, a brilliant migratory songbird. Richly hued seating and curtains are the color of local bougainvillea. Millwork pays homage to Texas mesquite and pecan trees and arches are solid pecan wood for acoustical smoothness.



"The McAllen Performing Arts Center is one of the most beautiful theaters I've ever performed in. They don't make them like this anymore. Whoever designed this theatre knew what they were doing."
– Legendary Recording Artist Tony Bennett

"The McAllen Performing Arts Center is going to be a place of memories, where our community can watch great performances from national organization to local entertainment including their own kids on a stage that could compete with venues in New, Chicago, or any big city in Texas. [It is] a community-inspired project that integrates family values."
– McAllen Mayor Jim Darling

TOTAL SQUARE FEET

25,000

BUDGET

$7,500,000

SHORT DESCRIPTION OF PROJECT

The City of San Juan's Parks and Rec Youth Center and Park will provide a much needed park in North San Juan for a rapidly growing community. In order to assess the viability of the project, ERO Architects worked with the City of San Juan to define its programming needs and generate cost estimates for the design intent. The new 25,000 square feet Youth Center and Park will house 2 basketball courts, gym area / boxing, and classrooms. Parks and Rec offices, outdoor basketball, soccer fields, splash pad, trails and an all inclusive playground. Located in North San Juan on Sioux Rd adjacent to the San Juan water treatment plant, the building will define a thriving and growing community. The aesthetic of the architecture weaves the community's history, culture, and land into the fabric of the building's design. The building becomes a structure that enhances public areas connecting them through a major park space that could bring the local community inwards the building.

Mario Gonzalez-Davis, Project Coordinator, Zapata County
200 7th Ave Zapata, TX / 956.765.5580

TOTAL SQUARE FEET

9,000

BUDGET

$2,573,661

SHORT DESCRIPTION OF PROJECT

The Zapata County Technical and Advanced Education Center is a distance learning center for such regional universities located in South Texas as Texas A&M International, Laredo College and South Texas College to provide education and training for Zapata County residents. It offers state-of-the-art telecommunications, networking and media technology. The project provides six classrooms and faculty offices with a flexible interior layout which support the college's mission to provide a diversified instruction complex. The design forms a strong sense of place and a campus-like community. The building's curved arrangement and passageway creates an indoor and outdoor environment. The curvature also lends itself to the landscaped courtyard creating a sense of campus. The Zapata County Technical and Advanced Education Center is certified Green. It features two alternate sources of energy, one of which is passive solar. The building, found along US 83, is keyed into the natural grade of the site that slopes down toward to the Rio Grande River. This creates an earth shelter on all its sides except for the southern exposure where a metal trellis provides high-quality filtered shading. In addition, the combination of energy-efficient interior lighting with exterior solar screens control the direct sunlight. Additionally, the well-insulated building envelope and a partial "green roof" contribute to low energy consumption.

Brownsville Public Utilities Board

PROJECT NAME AND LOCATION

PUB Service Yard / FM 511, Brownsville

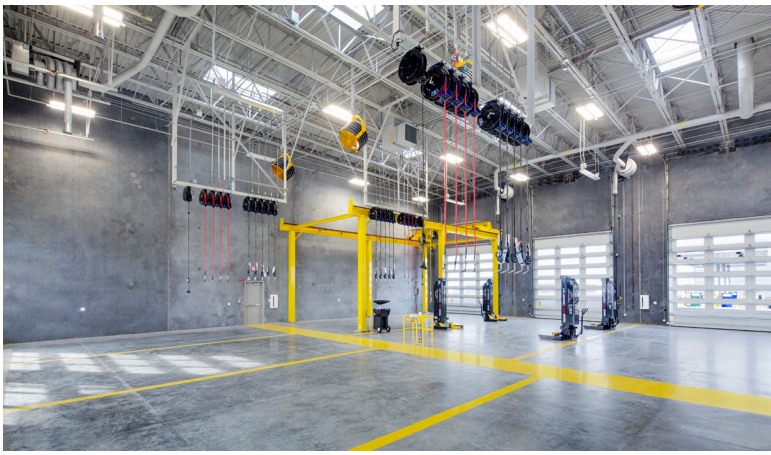
NAME, ADDRESSES, AND PHONE NUMBERS OF OWNER AND CONTACT PERSON TASKED WITH DAILY RESPONSIBILITIES OF PROJECT

Brownsville PUB / FM 511, Brownsville / Maria C. Leal, PE, Director of Water/Wastewater Engineering, Planning and Operations / 956.983.6275

TOTAL SQUARE FEET

55,000

BUDGET



$23,100,000

SHORT DESCRIPTION OF PROJECT

ERO designed the new Brownsville Public Utility Board's modernized Service Yard project. The new campus is situated on an 18-acre site located on FM511, near the Port of Brownsville. It features approximately 55,000 square feet of new office, warehouse and ancillary facilities to support the PUB's field operations. The new campus also features a fleet vehicle maintenance building, fleet fueling center, a fleet vehicle washing center and concrete drives, and paving for the Utility's 250 vehicles; and accommodates over 100 parking spaces for employee parking.

Dear Selection Committee,

The Gignac Architects team is pleased to submit our qualifications for architectural services for the New Service Center. Our team brings over 30 years of experience in similar projects, coupled with an extensive knowledge of Texas architecture.

OUR FIRM provides complete architectural services including master planning, from feasibility studies and facility assessments to conceptual design, through construction administration, including coordination of all necessary specialized and engineering subconsultants. Founded in 1988 and still owned by Raymond Gignac, Gignac & Associates, LLP (dba Gignac Architects) is a Limited Liability Partnership, with TBAE License number BR 1221. Our firm includes 20 employees, with four offices: in McAllen, Harlingen, Dallas, and our Corpus Christi headquarters.

Gignac Architects, with Principal Raymond Gignac, will have contractual responsibility with the City of Edinburg and will serve as Prime Consultant of the awarded projects. Our primary office for this project is located at 3700 N. 10th Street, Suite 205, McAllen, Texas 78501, and Raymond will be the main point-of-contact for contract negotiations with the City. He is most readily available by cell phone 361.442.4345 or email RGignac@gignac-associates.com.

OUR TEAM includes the expertise of a highly-qualified and technically-competent team of engineers and subconsultants. For this project, we have hand-selected a team with whom we have a history of successful projects, who are highly qualified, experienced, and have intimate knowledge of designing facilities in the Rio Grande Valley. We will include DBR on our team for MEP Engineering services, Green, Rubiano & Associates for structural engineering, Melden & Hunt for civil engineering. We have worked with each of these subconsultants successfully in the past, and we are confident this proposed team will be able to satisfy all of the requirements of this project.

I attest that all of the information included in this Statement of Qualifications is true and correct. We look forward to the opportunity to further demonstrate our approach and commitment, along with discussing the project in further detail with the City of Edinburg.

Sincerely,

Raymond Gignac, AIA

GIGNAC ARCHITECTS

GIGNAC & ASSOCIATES, LLP (dba Gignac Architects) has been serving Texas with Architectural, Interior Design, Landscape Design, and Construction Administration Services since 1988 when it was established by firm Principal, Raymond Gignac. The company is classified as a Limited Liability Partnership. Gignac Architects is a full service design firm, providing planning expertise in educational, institutional, municipal, and commercial work with an emphasis on quality design. We provide three office locations, in Corpus Christi, Harlingen, and McAllen to better serve our clients with quick, responsive expertise.

RAYMOND GIGNAC, AIA, Principal-in-Charge, has nearly 40 years of experience in Texas, Louisiana, New Mexico, California, Washington D.C., Virginia, and Maryland in all aspects of Architectural practice. As leader of the Gignac project team, Raymond personally oversees quality, cost control, staff and resource allocation, and commitment to project deadlines. With this leadership, Gignac Architects has successfully completed projects of all sizes—on time and in budget.

THE GIGNAC TEAM employs a full staff of design and construction professionals to promote quality in overall project management from project inception to completion. Since 1988, Gignac Architects has taken pride in providing a full range of services to meet the needs of our clients and to communicate both graphically and personally. We will commit the work force and resources necessary to complete your projects within the designated schedule. Each project team is tailored to address the unique challenges and opportunities to ensure a successful project.

Gignac Architects has successful experience with a wide-range of construction projects. We have extensive experience designing new construction projects, and an estimated 75% of our workload involves complex additions and renovations, and we are highly proficient in transforming existing structures into modernized, high-performance buildings with new purposes.

The Gignac team is a small business, a Minority Business Enterprise, and a Historically Underutilized Business (HUB) in the State of Texas.

CAMERON COUNTY

Isla Blanca Park Improvements, Sand Piper Pavillion, & Public Works Facility

South Padre Island, Texas

DESCRIPTION OF SERVICES

The project included design improvements to the existing pavilion and canopy at Isla Blanca Park in South Padre Island, Texas, which coincided with the existing Master Plan. Improvements include a multipurpose building, public works facility, outdoor amphitheater, restrooms and rinse stations, concessions areas and BBQ areas, RV area improvements, events and attractions spaces, parking, and pavilions.

Sand Piper pavilion included lighted beachfront boardwalks with shade structure. The pavilion was constructed 200 feet landward from the original site, with a conservation system of dunes to protect the structure.

One of the most important elements of the design of Sand Piper Pavillion is the historical relationship with the park. In the 1960's, a curved shaded structure existed on the site, which was a popular hang-out spot and reprieve for locals and tourists during the hot coastal summers. The new design of the structure reimagined the old, with updated amenities and utilities.

CORPUS CHRISTI REGIONAL TRANSPORTATION AUTHORITY

Staples Street Customer Service Center & Transfer Station

Corpus Christi, Texas

DESCRIPTION OF SERVICES

Gignac & Associates, along with Parsons Brinckerhoff, are providing full architectural and transit design services for the massive renovation of the Corpus Christi Transportation Authory's Staples Street Transfer Station. This is currently one of the largest transit centers in the city, and will be completely renovated to accompany the new customer service center that will be built next door. The station will be able to accomodate 8 full size CCRTA busses. The project will include reworking of the ingress and egress for busses as well as redesign of the massive canopy and flatwork at the station. Bus passengers will now enjoy anew transfer experience in a remodeled atmosphere with the ability to visit the adjacent customer service center between fares or stop-in to the retail or food verndor spaces nearby. The station will also be upgraded with state of the art technology and scheduling and display equipment to make the bus experience more efficient and enjoyable.

CITY OF CORPUS CHRISTI

Water's Edge Park Enhancements Design-Build

Corpus Christi, Texas

DESCRIPTION OF SERVICES

As part of a Bond Program for the City of Corpus Christi, the Gignac Architects team designed Water's Edge improvements on Shoreline Boulevard between Furman Avenue and Buford Street. After the City cut off a portion of Shoreline Boulevard to divert it around the new park area, we designed the new park improvements with restrooms, shaded pavilions, playgrounds, green spaces, utilities, landscaping, driveways and parking lots for future pedestrian events. The park also includes a dog park, which is the first dog park in the City of Corpus Christi.

CITY OF CORPUS CHRISTI

North Bayfront Park

Corpus Christi, Texas

DESCRIPTION OF SERVICES

Following a devastating Category Four hurricane in 1919, Corpus Christi filled a block into the Corpus Christi Bay to construct a seawall that would protect the community from future disasters. Since that time, the bayfront has been defined by Shoreline Drive—a wide boulevard designed primarily for automobiles—and provided limited spaces for pedestrians in the hot South Texas sun.

In 2004, Gignac Architects and a teaming firm prepared the overall master plan for the Corpus Christi bayfront—spanning from McGee Beach in the south to the ship channel in the north. The approved master plan called for the relocation of Shoreline Boulevard in order to accommodate green spaces along the water's edge, thus creating the vision for the North Bayfront Park. Situated next to the American Bank Center Arena, North Bayfront Park is the first of a series of parks to be constructed from the master plan.

A key feature of the park includes an interactive fountain to attract children and families. Parents can sit at the adjacent café in the park, protected from the wind with glass windscreens, while watching their children play in the fountain. The café is shaded by fabric stretched between posts while groves of palms and mesquite trees will grow over time to provide shady spots in the park. An arbor is designed to support colorful Bougainvillea planting that shade a walkway leading to the fountain. The arbor fronts a parcel identified for a future restaurant included in the design to activate and program the park.

Project Approach & Schedule

4

ADMINISTRATION BUILDING & TRANSIT TERMINAL, CORPUS CHRISTI, TEXAS

4

Gignac | Architects understands that this approach may need to be adjusted slightly to meet the needs of each specific project awarded for the City of Edinburg. The following approach ensures the program work under this RFQ would be developed and executed in a timely manner. This is a typical approach that we like to follow, but we work closely with each client to customize the plan based on the specific project needs.

STEP 1: CONSULTATION
The first order of business is listening. The objective in mind is to fully understand your goals and budget considerations.

STEP 2: VISUAL OBSERVATION
A site survey is conducted to understand space and any potential problem areas.

STEP 3: DIAGNOSTICS
Based on the visual observations we can recommend further testing to evaluate conditions not seen by the naked eye.

STEP 4: PROBLEM IDENTIFICATION
The expertise of our field representative and technical service personnel, enables us to identify concerns and offer solutions.

STEP 5: DEVELOPE FUNCTIONAL REQUIREMENTS OF THE PROJECT
This step includes defining the users and specific programming elements and scenarios of the facility.

STEP 6: RECOMMENDATIONS & BUDGETING
Once the project parameters are known, we are able to present schematic design options with cost-benefit analysis so that long and short term needs can be considered. The process of design begins with our on-site design charettes with the clients and the entire design team.

STEP 7: CUSTOMIZED PROJECT SPECIFICATIONS, PLANS AND DETAILS
The correct design for each unique project, along with the proper details, is provided in a standardized format to insure consistent quality. This plan will be built to meet all of the functional needs of the project, developed in step 5.

STEP 8: CERTIFIED CONTRACTOR RECOMMENDATIONS
To assure that designs are properly and correctly applied, contractors who are certified or approved are recommended.

STEP 9: PROJECT MANAGEMENT
Pre-bid meetings, pre-construction conferences, progress meetings, roof inspections, and field progress reports are all a part of the management process used to facilitate and insure proper construction on each and every project.

STEP 10: FINAL REVIEW AND CLOSE-OUT
Design team representatives provide a final walk-through and punch lists and insure proper design and construction standards and codes have been followed. Upon final completion a report summarizing the project from start to finish is provided.

STEP 11: QUALITY ASSURANCE PROGRAM
Throughout the entire design and construction of the project, the Gignac team conducts regular and periodic design & construction review meetings with any design team sub-consultants that are needed for the project, or with the contractors, to insure that the project is progressing successfully, and that all standards and codes are met. Our team ensures that all design criteria are met and designed to within our specifications to meet the specific requirements of the project.

BONUS: LOCAL OFFICE
The Gignac team has a local office that is easily accessible to clients, as well as team members and field representatives that are on-site, or available in office, at any time if any questions or concerns come up. We encourage and ensure regular communication with all clients to make sure goals, needs, and architectural intent are understood and accomplished.

CLIENT INPUT
*Our comprehensive commitment to providing the best possible architectural and engineering design services begins with our **ON-SITE DESIGN CHARETTES**.*

Through this process we forge a long-term relationship with our clients centered on an open dialogue, communication, and understanding of the goals and objectives. From there, we provide inspection and analysis, if required, which enable us to create design solutions specific and unique to the project at-hand. The open dialogue and understanding from the very beginning of the project insures continual communication throughout the life of the project, and makes sure that the client is comfortable with the design team and knows that the goals are being understood and accomplished.

The unique capabilities of the design team and the extensive capability of services we provide allow us to create designs that take all factors into account, including unique site obstacles, windstorm and hurricane standards, daylighting, accessibility, etc. With Design and Construction Peace of Mind as our ultimate desire, your needs and goals are placed first. The Gignac team will provide the best possible design & engineering solutions to insure that we meet and even exceed your expectations.

SPI Wave Multimodal Transit Station

SPI Wave Multimodal Transit Station

EXPEDITED CONSTRUCTION

The Gignac team is accustomed to working with expedited schedules for our clients. Through our experience, we have learned ways of overlapping project steps, where possible, to expedite the design and construction process.

We are experienced in working on projects of any construction delivery method, but for clients where timelines are very tight, we like to discuss the option of proceeding with a project using a Construction Manager at-Risk. This process gets a construction manager on board with the project from inception, which helps expedite scheduling and overall project timeframes. We will gladly discuss pros and cons of this delivery method in more detail with the City, as they pertain to your specific project needs.

PROPOSED PROJECT ASSIGNMENTS AND LINES OF AUTHORITY AND COMMUNICATION

Gignac & Associates, LLP (also known as Gignac | Architects) was founded, and is currently owned, by Raymond Gignac, AIA in 1988. As Principal-in-Charge, he will oversee the project team from the start of the project, through completion. We have successful working relationships with many local consulting firms, and we have worked with each of them on numerous past projects, including many other municipal projects in the area. Our project team is committed to providing the necessary staff to meet the goals of this project in a timely, efficient manner, and the designated personnel will remain committed to the project for its duration. The organizational chart below illustrates the lines of authority and communication that will exist between our project team and the City of Edinburg.

HOW THE TEAM FUNCTIONS

Gignac Architects will be the contracting firm with the City for all awarded projects. Raymond Gignac will be the main point-of-contact for negotiating contracts. Once the design process begins, Juan Mujica will be the local Project Manager, and main point-of-contact for the City during the design and construction phases of the project. Throughout design and construction, Gignac Architects will lead the project team, be in-charge of, and coordinate all required subconsultants, as outlined below. We will schedule and manage regular project meetings among the design team only as necessary throughout the design and construction phases, and at intervals decided upon with the City, we will schedule and manage project meetings with Gignac Architects and the City's design team, along with any subconsultants required at that stage.

RAYMOND GIGNAC, AIA, RID

PRINCIPAL-IN-CHARGE

Raymond Gignac, as principal of Gignac & Associates, is responsible for coordinating and overseeing personnel, consultants, and the management of projects. He has a wide range of experience in design of educational, institutional, commercial and municipal facilities. Raymond brings to the project team over 35 years of experience with completed construction costs approaching $1 billion. Raymond will head the project team as Principal-in-Charge and Project Manager with project oversight from the earliest stages of programming and design to project close out.

NICHOLAS GIGNAC, ASSOCIATE AIA, LEED AP BD+C
ARCHITECTURAL DESIGNER

Since joining the firm in 2010, Nick Gignac has gained valuable experience in programming, design, and project management across a broad spectrum of project sizes and types. Nick has worked on everything from small municipal projects to $100 Million high schools, and has become especially proficient in day-lighting, sustainable planning and design. As a LEED Accredited Professional, Nick often serves as a LEED Project Administrator. Nick also continues to learn and grow in his work and represents the future of architecture in South Texas as the second generation of Gignac | Architects. Nick is a LEED Accredited Professional.

DBR HISTORY

Founded in 1972, DBR Engineering Consultants, Inc. has evolved into the premier MEP engineering fi rm in Texas, providing mechanical, electrical, and plumbing engineering systems, as well as building commissioning, integrated technology, and security system consulting.

DBR's steady growth has been fueled by loyal clients who appreciate our willingness to listen, open-minded approach to problem-solving, and relentless commitment to service.

Now, more than 49 years later, DBR has a team of over 130 professionals in six cities across the State of Texas. While our history guides our growth, our talented team of consultants are focused on the future. We are helping to create healthy and comfortable environments that will stand the test of time.

GREEN, RUBIANO & ASSOCIATES

STRUCTURAL ENGINEER (HUB CERTIFIED)

GREEN, RUBIANO & ASSOCIATES provides sound, cost-effective structural designs for a variety of end-users and type of construction. Previous designs include reinforced masonry and concrete buildings, steel structures, concrete tilt-up panels, structural concrete slabs, and drilled pier foundations. Green, Rubiano & Associates provides forensic evaluation of existing structures, foundations and building envelopes. GRA's forensic evaluations seek to determine not only the probable cause of concern but realistic cost effective solutions for the facility owner. Established in 2000 Green, Rubiano & Associates currently earns more than $1,000,000.00 in design and consulting revenues. We are HUB Certified by the General Service Commission for the state of Texas and we are certified as a Texas Windstorm Insurance Association Certified Building Inspector.

MELDEN & HUNT, INC.
CONSULTANTS • ENGINEERS • SURVEYORS

CIVIL ENGINEER / SURVEYOR

Founded in 1947, Melden & Hunt, Inc. began business as a civil engineering and surveying firm providing diverse services to local municipalities, special service districts and the private sector throughout South Texas. For more than 67 years, our organization has continued to grow as one of the foremost consulting firms in the Valley specializing in the planning, design and construction of municipal facilities. Since the company's inception, the goal has always been to prepare cost effective designs while meeting clients site plan standards and municipality guidelines.

Our value engineering techniques begins with a thorough understanding of the client's needs, consideration of economic and market conditions and an in-depth analysis of the environmental constraints and opportunities affecting design. This information provides the basis for developing project plans, beginning first with preliminary conceptual studies and commencing with a comprehensive engineered site design package.

With our strong expertise in the civil site development field, Melden & Hunt, Inc. provides a wide range of services but not limited to:

- Site Investigation Feasibility Report (Due Diligence)
- Site Plan Engineering & Zoning Services
- Grading Plans
- Storm Water Drainage Plans
- Sanitary Sewer Design
- Permits

Furthermore, we are staffed by 50 professional, technical and office personnel providing the high quality service by maintaining responsive, informative, amiable relationships with agencies and you, our client. Our team will contribute to the successful completion of your proposed project. Key personnel will be directly responsible to the project and will be in close communication with the Project Architect and the City of McAllen. It is our opinion that the assignment of qualified, responsive, and experienced personnel is the single most important factor to ensure a project's success.
What distinguishes Melden & Hunt, Inc. from other civil firms is that we are equipped to provide all disciplines and services required, in-house, for site development ensuring that our clients experience minimal conflicts and maximum success.

What is more, we utilize engineering techniques along with our deep knowledge of regulatory code to solve site challenges and make recommendations for efficient and cost effective solutions. Using our vast experience and ability to confront and deal with our clients' obstacles, we provide creative yet practical solutions to each project we undertake.

At Melden & Hunt, Inc. we strive to provide you with the highest level of technical expertise with our depth of experience, responsive service and sound business practice. What is more, we have two well-equipped offices in Edinburg and Rio Grande City, Texas that permits us to respond to the client's needs and to offer the latest in technology. Our commitment to quality has guided our growth and earned our reputation as a leader in our profession.

MARIO REYNA, PE
SENIOR CIVIL ENGINEER

MELDEN & HUNT, INC.
CONSULTANTS • ENGINEERS • SURVEYORS

Mr. Reyna has 5 years of experience in the field of civil engineering. He has completed a wide range of projects for both public agencies and private developers. He has participated in a variety of development types, including mixed-use developments; healthcare facilities; municipal utilities; schools and universities; shopping centers; offices; industrial facilities; residential and multi-family developments; and state and local governmental agencies.

He has extensive experience in site civil design, including building, facility, and utility layout; site grading and earthwork; and design of paving, drainage, and utility improvements. Other areas of expertise include hydraulic and hydrologic analysis for open and closed storm drainage systems and floodplain reclamation studies; water distribution and wastewater collection systems.

Mr. Reyna's engineering experience has been with the City of Mission where he was part of a design team preparing plans and specifications for the expansion of Mission's North Water Treatment Plant and McAllen Public Utilities Boeye Reservoir Relocation Project. In addition to Mission and McAllen, Mr. Reyna was part of a second design team that prepared plans and specifications for the construction of the new Cimemark Theater, Main Event Center, Lubys, Clark Knapp Honda within the City of Pharr, Texas. Currently, Mr. Reyna is finalizing construction plans and specifications for La Joya ISD and South Texas College. These projects include site development project for a new FEMA Shelter Dome within the La Joya ISD property and infrastructure utilities for portable buildings at the Pecan Campus.

As mentioned, Mr. Reyna oversaw the construction of McAllen's 300 Million Gallon Raw Water Reservoir funded by the TWDB. The reservoir project is 100-percent complete and Mr. Reyna was instrumental in reviewing submittals, replying to contractor's modification requests, contractors request for information, and approving pay request. In addition to the reservoir, he is oversaw the construction of a 60-inch raw water line for McAllen Public Utilities. Other inspection projects include the City of Taft Wastewater Treatment Plant Rehabilitation Project, Edinburg CISD paving improvements, and STC Mid Valley Campus parking lot improvements.

As an engineer and inspector, Mr. Reyna has always responded to the needs of every client and has function as an extension of their staff to exceed their performance objectives and respond to their needs on short notices.

Transmittal Letter

Date: July 15, 2024

From: Heffner Design Team
Andrew T. Heffner, Owner
4100 N. 22nd Street,
McAllen, Texas 78504

Attention: City of Edinburg
Planning Department

To whom this may concern,

Thank you for providing us the opportunity to submit our response to your Request for Qualification 2024-8 Architectural Services Rotation. We feel that our designs can completely transform any property, city, school, or neighborhood by providing high-quality outdoor recreational facilities within an inviting and healthy environment.

We, at the Heffner Design Team, pride ourselves at being experts at landscape architecture design and construction methods and processes. Our design partner, Sam Garcia Architect's specialize and excel in architecture design and practices. Our staff has designed over 100 parks during our tenure and numerous public, private, commercial, and residential projects throughout the Rio Grande Valley and beyond. Our designs are a detailed type of design which blends natural elements with the built environment. Our custom designs accommodate efficient maintenance practices, resource conservation, and playful elements.

Additionally, our decade long experience with city and grant standards provides a value-added resource to any project. Your project will receive a priority status and the full attention of our entire staff. We are confident that we can provide a beautiful design that meets the city's schedule and budget.

Enclosed is our Statement of Qualifications further elaborating on the details of our firm, staff experience, and examples of our work. We hope you find the information useful in determining the best design team to help you realize your vision for the project. All considerations and addendums have been received.

At your convenience, our team is available to meet with you to further discuss the project. I, Andrew Heffner will be the main point of contact and can be reached via email at aheffner@heffnerdesignteam.com and my cell phone number is 956-212-3385. I look forward to your response.

Sincerely,

Andrew T. Heffner

Andrew T. Heffner, PLA, ASLA, AIA-LRG Affiliate, CLARB

2. FIRM QUALIFICATIONS AND EXPERIENCE

Firm Qualifications & Experience

A well-designed exterior environment can rejuvenate the soul, refresh the mind, and strengthen the body.

Welcome to the Team! The Heffner Design Team is a talented group of licensed professionals that are passionate about creating exceptional architectural building and outdoor spaces. We are here to provide you the highest functioning design along with extraordinary customer service. We are honored to have the opportunity to provide to you our firm profile. You will find in this document a range of information that will illustrate our aptitude, experience, and knowledge.

Experience We have a combined 50+ years of experience in all areas of exterior space design, architectural design, project management and construction. Key staff members and partners are fluent in design practices for governmental agencies, public spaces, private residences, and commercial properties. They understand the nuances and opportunities of each type of development. We excel at developing complete design solutions from the largest school campus to the smallest garden bench. Experience in the governmental and private sector is a unique feature of our team, and provides added value and benefits to the project by being inclusive of considerations and perspectives of a wide variety of organizational owners and staff.

Integration The vision for the project is blended with a thorough knowledge of design and construction practices. We are experts at placement of design elements to maximize efficiency, maintenance, and beauty. Our designs are the result of a detailed comprehensive process that strives to gain as much knowledge as possible about the client's wishes and combine them with a site's opportunities and restraints. We strive to delight, inspire and make everyone's world a little more beautiful.

Details We have worked with the City of Edinburg on the Freddy Gonzalez Boulevard Upgrades project. Additionally, we have been The University of Texas Rio Grande Valley landscape architect for the past four years and have work on UTRGV Vaquero Stadium, UTRGV Practice Center, UTRGV Performance Center, UTRGV Golf and Soccer Fields, UTRGV Student Services and Green Spaces, UTRGV Track and Soccer Fields, and UTRGV Fieldhouse. Our design firm is headquartered in McAllen, Texas. We are open to hiring part-time employees if needed to work on smaller scale project. At this moment, we don't forsee hiring anyone new but if we do, we will formally notify the city of those changes. We are a professional limited liability company that is registered with the Texas Board of Architectural Examiners. We are licensed to practice landscape architecture in the States of Texas and Michigan and licensed to practice irrigation design in the State of Texas. Our registrations are in good standing. Our DUNS number is 019022505. We hope that you consider our expertise as exterior space designers and let us become an integral part in making your projects dreams come true. Thank you for your time and consideration.

Approach

Our approach to a successful completion of the project is simple; WE LISTEN TO THE CLIENT! We strive to understand the wishes and needs of the client and relate this understanding in the work products. Our process begins with a project kick-off meeting that will include all project participants. The city's design program, schedule, and budget will be discussed. Funding sources and any requirements attached to said funding will be identified. Agency representatives, flow of information, contact numbers and email addresses, etc. will all be identified and recorded.

We use a phased approach in the development of construction documents, bidding, and construction administration. At the conclusion of each phase we will request a review and approval of the current phase documents before we procced to the next phase. This is a project management tool to assure budgets are not exceeded and the client agrees with the design solution.

Our detailed custom design project approach includes the following phases and tasks –

Site Analysis Phase: To accurately identify the physical attributes and limitations of the site relative the project program we will:

1. identify existing site conditions and features such as topography, drainage patterns, vegetation, including significant specimen plants, water elements, structures, views, and known off-site considerations relevant to the project program
2. confirm general location of available utilities
3. analyze existing site conditions to identify physical attributes and limitations of the project site
4. review applicable governmental requirements, including zoning, ordinances and permit requirements, known special restrictions, and zoning conditions
5. advise the client of tests and surveys, such as soils analysis, topographic survey, utility survey, and/or property boundary survey, that may be required
6. submit findings in a detailed report

Schematic Design Phase: Based on the Site Analysis Phase findings, we shall explore design options and develop a schematic design through the following:

1. prepare studies and relational diagrams for the organization and placement of proposed program elements taking in consideration the existing site features and the requirements of other program elements
2. prepare drawings illustrating alternative design concepts for the form and configuration of the program elements on the site
3. evaluate alternative design concepts and, in conjunction with the client, identify a preferred design concept
4. based on the preferred design concept, prepare a scaled schematic design plan illustrating the form and configuration of the proposed improvements on the site
5. preliminarily select key materials or material systems and prepare preliminary designs for key construction details
6. prepare an opinion of probable costs to construct the proposed improvements, including a recommended contingency
7. submit the plan, details, cost opinion, and other deliverables as appropriate comprising the Schematic Design submittal to the client for review and approval.

Design Development Phase: Based on the Schematic Design approved by the client, we shall refine and sufficiently detail the proposed form of the improvements to fully convey the design intent through the following:

1. revise and refine the Schematic Design plan to spatially define the location of the proposed improvements in relation to both the existing site features and the other proposed improvements
2. prepare the design detail sketches illustrating the proposed form, materials, color, and textures of the proposed improvements
3. prepare supplemental drawings as required to illustrate the deign intent
4. prepare outline specifications for applicable areas of work
5. update the opinion of probable cost to construct the proposed improvements, indicating when appropriate the assumptions on which the opinion is based
6. submit the plans, details, cost opinion, and other deliverables as appropriate compromising the Design Development submittal to the client for review and approval

Construction Document Phase: Based on the client-approved Design Development phase submission, we shall prepare Construction Documents suitable for bidding or contract negotiations and for construction of the project. We shall:

1. prepare construction plans
2. prepare construction details to describe the materials, spatial relationships, connections, and finished suitable for constructing the proposed improvements
3. prepare construction specifications for the proposed improvements
4. coordinate the drawings and specifications prepared by our consultants, and when appropriate, the client's other consultants
5. update the opinion of probable cost to construct the proposed improvements
6. prepare documents suitable for review for compliance with applicable governmental requirements and assist the client in the submission process to governmental agencies

7. address timely and applicable review comments received from agencies and revise the Construction Documents for compliance when required
8. submit final opinion of probable construction costs

Bidding Phase: When contracts are bid, we shall assist the client during the bidding process to identify the contractor to construct the project and establish the firm price to accomplish the work. We shall:

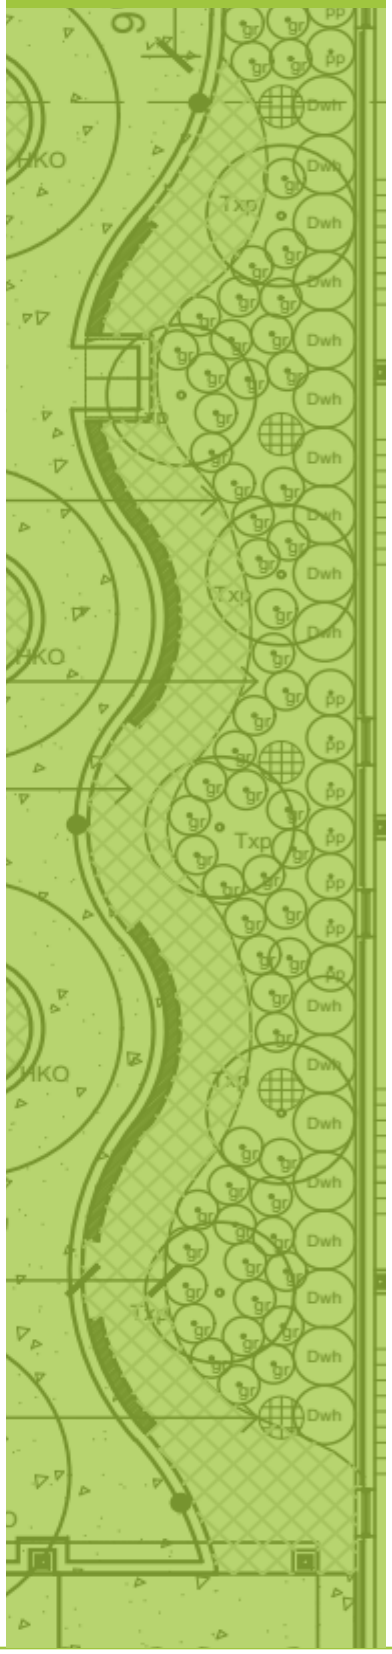
1. coordinate the schedule for bid advertising, pre-bid qualification process pre-bid conference, addenda, and bid opening
2. prepare and organize bid solicitation and proposal forms consistent with the client's requirements
3. arrange for printing and distribution of the bid documents
4. evaluate pre-bid qualification submissions and formulate recommendations
5. conduct the pre-bid conference and document the proceedings
6. clarify the Construction Documents as required through the preparation and issuance of addenda
7. attend the bid opening
8. review bids including alternates and formulate a recommendation on the award of the contract

Contract Negotiation Phase: When contracts are negotiated, we shall assist the client during the contract negotiation process to establish contract terms for the construction of the project. We shall:

1. arrange for transmittal of Construction Documents to the selected contractor
2. meet with the selected contractor to review the Construction Documents and the proposed improvements.
3. provide clarification to the Construction Documents as required
4. review the selected contractor's proposal and formulate a recommendation on the award of the contract

Construction Contract Administration Services: We shall provide the following administration services associated with the construction of the project.

1. take part in the pre-construction conference
2. undertake periodic observation of the work in progress for conformance with Construction Documents
3. evaluate the completed work to determine acceptance or non-acceptance based on conformity with the design intent expressed in the Construction Documents
4. review and approve contractor progress payment requests
5. review and approve a final application for payment and recommend acceptance of the project by the client



3. TEAM MEMBER QUALIFICATIONS & EXPERIENCE

ANDREW T. HEFFNER

PLA , ASLA,

Assoc. AIA, CLARB

Principal Landscape Architect

EDUCATION

Michigan State University, Bachelor of Landscape Architecture, 2001
Participant in Study Abroad Program (United Kingdom, Spain and Morocco)
ASLA Merit Award recipient

EXPERIENCE

Owner and Principal Landscape Architect, Heffner Design Team, PLLC, May 2012 - present

Andrew has an integral role in each project that concentrates on the creative direction and design of all project components. He works daily with the project management and support staff to fluidly create beautiful and highly functional designs. As the principal landscape architect and lead designer on a multitude of projects, he utilizes his seventeen years of experience to facilitate the client experience while maintaining the highest levels of efficiency and organization.

ROBERT DURAN

Licensed
Irrigation Designer

EDUCATION

South Texas College, Associate of Applied Science Network Specialist, 2005
South Texas College, Associate of Applied Computer Specialist, 2006
South Texas College, Bachelors of Applied Technology Computer Information Technology, 2012

EXPERIENCE

Irrigation Designer, Heffner Design Team, PLLC, May 2012 - present

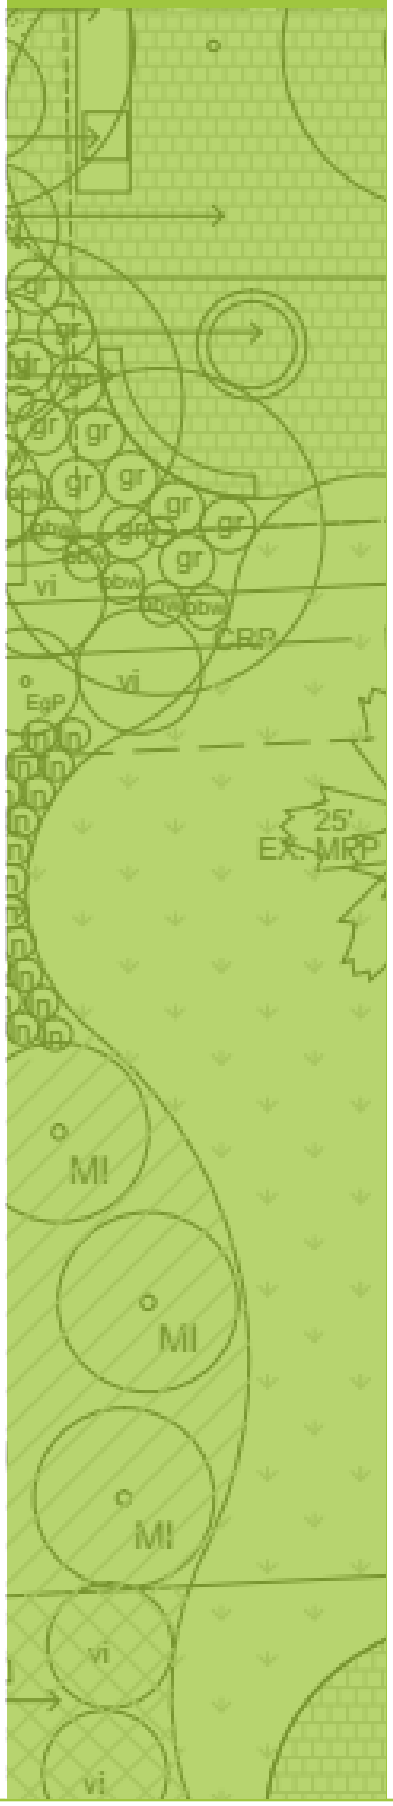
Robert manages all aspects of our project irrigation components. He routinely develops innovative design solutions that efficiently reuses water and minimizes potable water use. He routinely develops sophisticated designs to meet complex project requirements. He has successfully produced designs for parks, residences, and commercial properties alike. Robert's tenure at local park and recreation departments has equipped him with the tools to incorporate efficient maintenance and remote management features.

Irrigation Water Manager, City of McAllen, July 1996 – September 2015

As water manager for the entire City of McAllen irrigation system, Robert was responsible for management of the sophisticated remotely operated irrigation controller system. The system utilizes satellites, and desktop and telephone applications to maximize the efficient use of water. He also supervised a crew of seven irrigators that were tasked with the maintenance, repair, troubleshooting, and installation irrigation systems. The entire irrigation system has a total in excess of 3000 valves, 35 pumps, 200 backflow prevention devices and 100 irrigation controllers. Robert also was charged with the development of irrigation designs and specifications for a multitude of City capital improvement projects in excess of $2 million.

PROFESSIONAL CERTIFICATIONS AND LICENSES

Licensed Irrigator, State of Texas, license no. 16516
Licensed Backflow Inspector, State of Texas, license no. 15306
Certificate of Completion for Front-Line Leadership Training
Certificate of Completion for Texas A&M Eng., Utilities and Public Works Training
Certificate of Completion Motorola Irrigation Control Center Training



Robert had a significant role in the following projects -

- Tres Lagos Development
- Southside Park
- Villa Garza Flores Park
- Jones Box Park
- Northside Park Master Plan
- South Texas College Regional Center for Public Safety Excellence
- Mercedes Sports Complex
- Port of Brownsville
- Harlingen Convention Center and Hotel
- PSJA ISD Kennedy Middle School
- PSJA North Early College High School
- Elsa Gateway Signage
- Elsa Forth Street Linear Park
- City of Brownsville Metro Transfer Station
- Numerous other residential and commercial projects.

MARIBEL LOPEZ

AIA-LRGV Affiliate

Senior Designer

EDUCATION

South Texas College, Associates Degree of Architectural Drafting, 2017

University of Texas Pan America, Dual-Enrollment, 2010

EXPERIENCE

Senior Designer, Heffner Design Team, PLLC, Feb 2018 - present

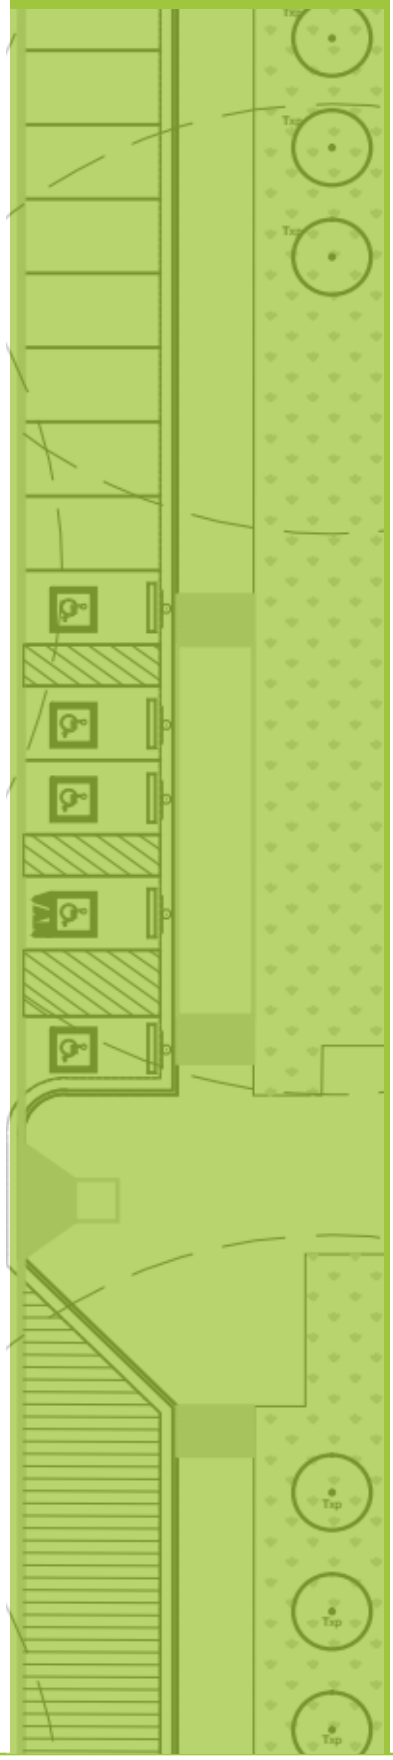
Maribel's utilizes her wide range of skills to effectively manage the develop of all plans, specifications, and opinions of probable cost for each project that the Heffner Design Team completes. She effectively manages a team of computer aided design technicians and administrative assistants to efficiently create complete, beautiful, and well organized packages of construction documents. Maribel's attention to detail and leadership skills contribute to the completeness and efficacy of all design solutions. Additional duties include creating computer-aided designs, uses software to create design plans for buildings and landscape areas. Creates 2D designs called surface modelling, and 3D designs called solid modelling. Prepares cost estimates on projects, field measuring and base plan creation.

Office Assistant, American Value Construction, LLC, September 2017 – November 2017

Ensures the company is on track to meet its financial goals. In addition, developed invoices, budgets, bids, prepared reports, and managed payroll. Acquired plan sets and extracted data using software to formulate a bid with material and labor.

PROFESSIONAL SOFTWARE SKILLS

Microsoft Excel, Microsoft Word, Microsoft PowerPoint, AutoCAD 2018, Revit, MS Publisher, Adobe Photoshop, MicroStation V8i, 3ds Max, PlanSwift, Sketchup



Maribel had a significant role in the following projects -

- Villa Garza Flores Park
- The Kanuba Ranch
- Synergis Pharr
- San Benito Southside Park
- Trufit Potranco San Antonio
- Diaz Plaza in San Antonio
- McCaleb Funeral Home
- Sazon Mexican Café
- City of Brownsville Metro Transfer Station
- H. Guerra Residence
- Sazon Mexican Café
- Culebra Square
- Elsa Gateway Signage
- PSJA North Early College High School
- PSJA New Swimming Facilities
- Elsa Forth Street Linear Park
- St. Joseph Catholic Church

AURORA BARRERA

AIA-LRGV Affiliate

Development Coordinator

EDUCATION

Sam Houston State University, Bachelor of Business Administration, 2024

South Texas College, Associates of Criminal Justice, 2018

Member of the Criminal Justice Delta Sigma Phi Honors Association

EXPERIENCE

Development Coordinator, Heffner Design Team, PLLC,

September 2016 – Present

Responsible for planning, development and implementation in all the levels of the Organization. Ensures the company is on track to meeting its financial goals. In addition, leads and follows billing procedures. Experience in developing and managing budgets, hiring, training, supervising and appraising personnel.

SPECIALIZED SKILLS

- Directs the efforts of the marketing, communications, public relations and coordinates at the strategic and tactical levels with the other functions of the Organization.
- Effectively manages the placement of CAD files, specifications, and opinions of probable cost for each project and manages all projects that go out to bid.

6. PROFESSIONAL SERVICES AGREEMENT

Date: July 15, 2024

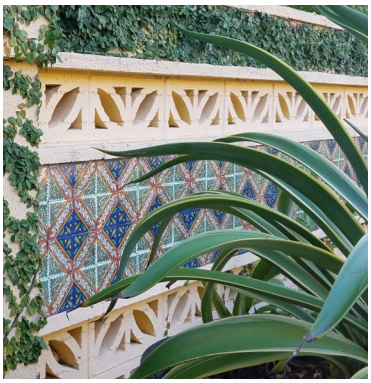
From: Heffner Design Team
Andrew T. Heffner, Owner
4100 N. 22nd Street,
McAllen, Texas 78504

Attention: City of Edinburg
Planning Department

To whom this may concern,

Thank you for providing us the opportunity to submit our response to your Request for Qualification 2024-8 Architectural Services Rotation. We attest that the Professional Services Agreement has been read and that we meet the prerequisite insurance requirements. If selected, we agree to enter in such agreement.

At your convenience, our team is available to meet with you to further discuss the project. I, Andrew Heffner will be the main point of contact and can be reached via email at aheffner@heffnerdesignteam.com and my cell phone number is 956-212-3385. I look forward to your response.



Sincerely,

Andrew T. Heffner

8. WORK EXAMPLES

FREDDY GONZALEZ BLVD IMPROVEMENTS

Client: City of Edinburg
Cost: $750,000.00
Funding: City Funds
Date Completed: Project is under the Construction Document Phase.
Role: Andrew Heffner,
Landscape Architect

These captivating images showcase a schematic design of the proposed boulevard accentuated by an exceptional landscape. Upgrades consist of concrete trails, decomposed granite trails, landscape, irrigation, parking lot, water, sewer, and electrical lines, a restroom, a splash pad site, solar panel lights, site furniture and erosion control. These new upgrades will enhance the boulevard, create cohesiveness, and connect nearby parks and schools.

FREDDY GONZALEZ BLVD IMPROVEMENTS

TEXAS DPS LICENSE MEGA CENTER, EDINBURG, TEXAS

PROJECT INFORMATION

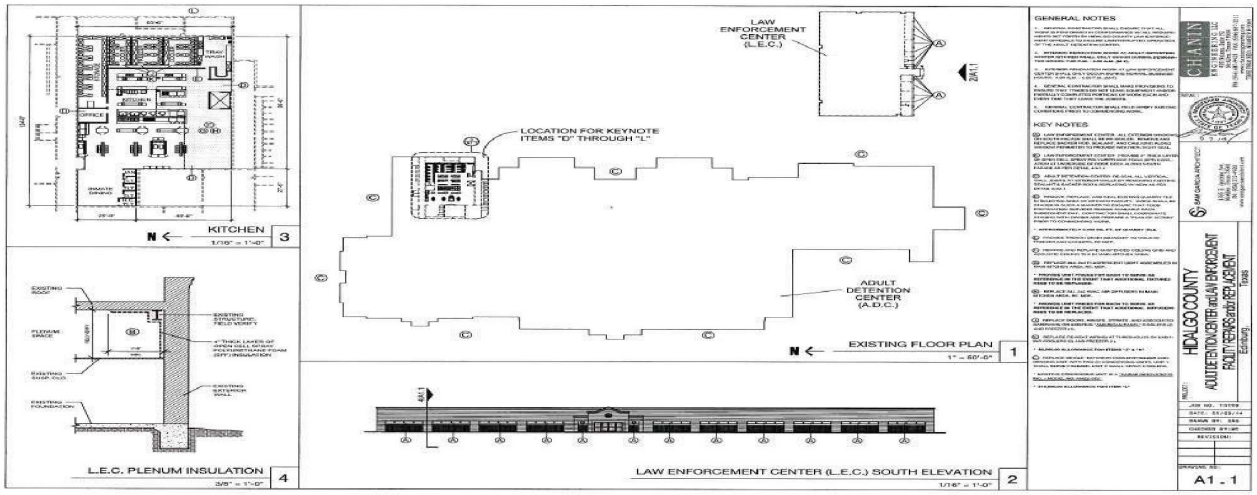
Project Designer/Planner: Sam Garcia Architect, LLC
MEP Engineer: Trinity MEP Engineering
Project Manager: Sam R. Garcia, AIA
Final Construction Price: $3.4 M

TEXAS DPS DRIVERS LICENSE MEGA CENTER

LOCATION: Edinburg, Texas
DATE COMPLETED: March 2017

As a result of Hidalgo County's continued significant growth, the Texas Department of Public Safety decided to build a new facility north of Edinburg. The facility serves three purposes:

1. Facility for driver license issuance/renewal
2. Commercial driver license testing facility; and
3. Base of operations for DPS Troopers.



This project was the result of a public/private partnership between the State of Texas
and a private real estate developer.
SGA was part of the private developer's team, which included the real estate acquisition, construction, and engineering subconsultants. This method of procurement and construction allowed the State of Texas to have the facility they wanted in a much less expensive and time-consuming way than the traditional design-bid-build procurement method. SGA was happy to play a role in an alternate delivery method that benefits both the public and private sectors.

HIDALGO COUNTY ADULT DETENTION CENTER, EDINBURG, TEXAS

HIDALGO COUNTY ADULT DETENTION CENTER AND LAW ENFORCEMENT BUILDING

LOCATION: Edinburg, Texas
DATE COMPLETED: December 2015

The original 1990s construction of the Hidalgo County Jail and adjacent Sherriff's offices had numerous deficiencies. Many of these deficiencies were negatively affecting the health, safety, and welfare of employees and inmates. Hidalgo County hired a group of consultants, including Sam Garcia Architect, to ameliorate the deteriorating conditions.

The primary area of concentration was a total reroofing of over 200,000 square feet of roof area. This work coincided with replacement of existing HVAC equipment. This task was made more complicated by virtue of being done in an actively running jail detention facility. The work required extreme attention to detail to ensure that not one potential security/safety breach became a reality.

The next major component was an upgrade to the kitchen and food storage facility in the Adult Detention Center. This included replacement of existing walk-in cooler and freezers, total resurfacing of the floors, new plumbing fixtures, and upgrades to the electrical system.

Rio Grande City Courtyard

Client:	Rio Grande City
Cost:	$100,000.00
Funding:	City Funds
Date Completed:	October 2015
Role:	Andrew Heffner, Principal Landscape Architect

This central space was highly used but in desperate need of a renovation It connects a variety of municipal offices, has large existing native trees, and needed to function as an outdoor event space in the evening.

We used a concept of wrought iron scroll work to develop the design. Wrought iron weaves through the lives of all Rio Grande City residents. The simple scroll shape used throughout the downtown area was utilized to unify the disjointed courtyard space. This shape extends beyond the courtyard edges inviting visitors into the space and the central water feature.

The existing historical pavers were reused and inset into the new brightly colored pavement. A low- maintenance central water feature was added to include the soothing sound of water. Stones from the Rio Grande were reused around the water feature to reinforce the connection to the past. Native plantings permeate the perimeter of the site. Additional trees were added for shade and bird and butterfly nectar plants were included in a pollinator garden.

Gateway and Monument Signage

Client: City of Elsa EDC
Cost: $50,000.00
Funding: City Funds
Date Completed: 2019

The City of Elsa Economic Development Corporation has tasked our team with developing a comprehensive signage program at major entrance points to the city. Our design incorporates modern materials like cor-ten steel and aluminum lettering with traditional cast stone trim and natural stone. Color changing lights add interest in the evening and make this a true landmark. Drought tolerant muhly grasses, agave, and succulents add the finishing touch. Welcome!

Client: City of McAllen
Cost: $250,000.00
Funding: City Funds
Date Completed: 2012
Role: Andrew Heffner, Principal

This small community park is a picture-perfect partnership between the city and county governments. Aluminum fencing and limestone columns provide a comfortable buffer from adjacent traffic. Modern playground equipment, swings, and winding walkways offer an escape from our technology centered world. Picnic tables, benches, and grills complete the park user experience. Landmark limestone park signage is surrounded by large moss rock boulders and crushed granite.

Client: Pharr– San Juan-Alamo ISD
Cost: $1,700,000.00
Funding: ISD Funds
Date Completed: 2020
Role: Andrew Heffner, Principal

A premier South Texas school district requested a complete renovation of one of their early college high school campus. Our design concept is to integrate as many natural elements as possible. Stone patios with cell phone charging stations, a cor-ten steel clock tower, a hanging garden landmark sign, rain gardens, ephemeral streams, umbrella shades, tree groves, meadows, and pollinator gardens will be added. New entrance-way experiences will greet students, staff, and visitors. Lighting will add interest and expand the use of outdoor spaces at night.

Tres Lagos Community Parks

Client: Tres Lagos Public Improvement District
Carlos Lozano
Telephone: (956) 287-2800 I E-Mail: carlos@mlrhodes.com

Cost: $3,200,000.00

Funding: Texas Parks and Wildlife Grant and Private Funds

Date Completed: November 2017, 2020

Role: Andrew Heffner, Principal Landscape Architect

Over the past few years we have had the pleasure of coordinating multiple public and private agencies to develop the public spaces of the largest planned unit development in South Texas. Tres Lagos is a 2,500 acre development that features homes, businesses, schools, and parks. The Community Park Project is a series of three interconnected parks that offer a wide variety of recreational amenities. We worked tirelessly under an extremely tight deadline to develop the plans and specifications that met the Texas Parks and Wildlife Department requirements and the developer and City's needs. The grant monies included U.S. Fish and Wildlife federal funds. We were able to successfully incorporate the federal fund grant requirements into the design and the contract documents. Our process is so thorough that the review by Texas Parks and Wildlife Department resulted in zero changes and an expedited Notice to Proceed. The result of the intense coordination between all project partners is a beautiful and highly functional series of outdoor spaces that is teeming with families and sports enthusiasts.

Project elements included:

- Fishing dock
- Restrooms
- Soccer fields
- Tennis courts
- Basketball courts
- Volleyball courts
- Dog park
- Outdoor exercise equipment
- Picnic shelters
- LED lighting
- Irrigation system
- Rental pavilion
- Kayak launch
- Playgrounds

LDS McAllen Temple

Client:	Latter Day-saints Temple
Cost:	$3,500,000.00
Funding:	Private Funds
Date Completed:	2023
Role:	Andrew Heffner,

These captivating images showcase a grand building accentuated by an exceptional landscape. The architectural marvel exudes a sense of timeless elegance, while creating a sacred space for The Church of Jesus Christ of Latter-day Saints' community. The surrounding landscape design is meticulously crafted, featuring an array of 20,000 shrubs and 400 trees that create a harmonious blend of nature and architecture. With its unique and unparalleled charm, this one-of-a-kind space offers endless possibilities for both aesthetic enjoyment and functional use.

PSJA North Early College High School

Client: PSJA North Early College High School
Allen Williams, Landscape Habitat Specialist
Telephone: (956) 354-2000 I E-Mail: allen.williams@psjaisd.us
Cost: $1,700,000
Funding: ISD Funds
Date Completed: 2020

A premier South Texas school district requested a complete renovation of one of their early college high school campus. Currently the 2,200 students change classes, eat lunch, and socialize in a completely concrete environment. Our design concept is to integrate as many natural elements as possible. Stone patios with cell phone charging stations, a corten steel clock tower, a hanging garden landmark sign, rain gardens, ephemeral streams, umbrella shades, tree groves, meadows, and pollinator gardens will be added. New entrance-way experiences will greet students, staff, and visitors. Lighting will add interest and expand the use of outdoor spaces at night.

Tres Lagos Trails and Neighborhood Parks

Client: Tres Lagos Public Improvement District
Mike Rhodes
Telephone:(956) 287-2800
E-Mail: mike@mlrhodes.com

Cost: $2,000,000.00
(owner provided grading and infrastructure excluded)

Funding: Texas Parks and Wildlife Grant and Private Funds

Date Completed: November 2017, 2020

Role: Andrew Heffner, Principal Landscape Architect

There are currently three neighborhoods at the Tres Lagos planned unit development. Inside each of the three neighborhoods there are a series of public spaces that include walking trails, benches, playground grounds, postal mail centers, and entranceway monuments. The plant material palette that was established at the Community Park project was extended to the neighborhood parks. The playgrounds were also similar to the larger park project but reduced in scale to serve the individual neighborhood needs. There is a series of interconnected trails that weave throughout the neighborhood that are lined with native shade and flowering trees. The selective placement of plant material will screen activity areas from adjacent residences. These neighborhood trails and parks have become a highlight of the neighborhood and a great feature when home buyers are shopping for their new home.

Project elements include:

- Native shade and flowering trees
- Irrigation system
- LED lighting
- Amphitheater
- Playgrounds with swings
- Parking lots
- Mailbox centers
- Walking trails

RE: Architectural Services Rotation

Dear Evaluation Committee,

Milnet Architectural Services is pleased to submit its qualifications for professional architectural services to the City of Edinburg. Milnet offers the convenience of a local, HUB certified firm experienced in municipal facilities.

Services Provided | Our firm offers full architectural and project management services through all phases of design and construction including programming, schematic design, design development, construction documents, bidding, permitting and construction administration. As a firm specializing in architectural services, we have a unique level of technical experience in the design and execution of construction projects. Our team has the resources and prior work experience to manage the quality of work, maintain the project schedule, control the cost, and most importantly, coordinate the communication and project records to guide the project through completion.

Prior Experience | We have over twenty-four (24) years of experience and look forward to bringing this wealth of experience and knowledge to the City of Edinburg. Our experience includes projects that have been funded through federal and state grants, and we are familiar with the program requirements that are imposed by government agencies.

Addition/Renovations of Buildings | Our company specializes in addition/renovation projects. We embrace the challenges of working on these types of projects and the issues that may arise once these buildings start being uncovered. We are familiar with the discovery process and know how to handle these issues as they arise. We also have experience working with the challenges of renovations within an existing functioning building and understand the importance of communication and coordination between all parties (Owner, Contractor & Design Team) for a successful project completion.

Schedule & Budget Conscious | The Milnet Team has a noted record of delivering projects on time and within budget along with a considerable amount of experience fast tracking projects. We have a very high percentage of projects that come within budget and work as a team with the owner and contractor to value engineer as required without sacrificing quality.

We pride ourselves in providing attentive services and look forward to facilitating the coordination of a project plan that ensures the successful completion of future projects. We take very seriously our responsibility to act in the best interest of our clients and we pledge every effort to help the City in achieving its goals. The enclosed Statement of Qualifications will further elaborate the proposed team, relevant experience and qualifications. As the President of Milnet Architectural Services, I am the main point of contact and I am authorized to bind the firm to a contract and can be reached via phone at (956) 688-5656, email at rudym@milnet-archservices.com or in person at the address noted above. We look forward to the opportunity and appreciate your consideration.

Sincerely,

Rodolfo R. Molina Jr., AIA, President

Firm Background | Milnet Architectural Services (MAS) is a McAllen based design firm offering professional services in architecture. The firm was established on January 1, 2000 by Registered Architect Rodolfo R. Molina, Jr. In March of 2011 it was registered as a Professional Limited Liability Company. Mr. Molina currently serves as the President and Project Architect with more than 40 years of experience.

Services Provided | Our firm offers full architectural and project management services through all phases of design and construction including programming, schematic design, design development, construction documents, bidding, permitting and construction administration. Our team manages and coordinates a project through every phase, because of this we are able to use our knowledge base of Best Management Practices to the benefit of our clients.

Firm Philosophy | Milnet was created with a consistent philosophy we are proud to uphold:

"We strive to provide the same exceptional level of service to every client by providing more attentive service and responding to clients needs with thoughtful solutions."

More Attentive Service | Our "more attentive service" mentality means that We take ownership of a project and ensure that we meet or exceed client expectations while delivering exceptional projects. Our President, Mr. Rodolfo Molina, AIA is personally involved in every project from beginning to end. As a result of this attitude the majority of our clients are repeat costumers.

We measure our success by the following:

- Repeat, satisfied clients
- Positive post occupancy evaluations
- Minimal amount of change orders
- Adherence to budget
- Development of relationships

Municipal Project Experience | In the past twenty-four years our firm has consistently worked with local municipalities on a variety of projects ranging from small renovations, addition and new facility construction. The project summary pages enclosed further describe this experience and our history of projects completed in a timely manner and within budget. This experience coupled with our dedication to client service are prime factors in our unique ability to best serve the City of Edinburg.

All work performed and project management services rendered by Milnet will be done so from our McAllen office. Our team is local, experienced and ready to serve the City of Edinburg promptly.

Our team of qualified personnel has experience managing multiple projects of varying sizes and is familiar with projects similar to those noted in the potential scope of services under this request for qualifications.

Working together in a spirit of cooperation and professionalism, we will achieve the City of Edinburg's scheduling and budgetary goals. The methods outlined below have provided us the opportunity to complete previous projects within the budget and on schedule. Our intent is to work as a liaison with the contractor's superintendent or project manager, the A/E team and the City of Edinburg to ensure adequate communication, record keeping and conformity with the contract documents including the approved plans and specifications.

Standard Architectural Design Project Services

Programming | We will work with administration, staff and other pertinent participants as dictated by the Owner to craft a program that will document all spaces, adjacencies, functions, sizes and special requirements. Oftentimes the creation of the program will require numerous meetings with user groups and administration, we will facilitate these meetings. Once complete we will document and publish a complete program.

Design | We will work with the Owner and present the project at the Conceptual and Schematic Design Phases. We will have design review meetings at stages during these phases. We understand the importance of these new construction projects and the impact that it has on a community and we will work diligently to produce a project that fits the needs and aesthetics of the City of Edinburg. During this phase we will meet with code officials with the city to discuss and resolve any code issues that we may have and to ensure that all Federal, State and local regulations/policies are met.

Construction Documents | Once design is approved we will create the Drawings and Specifications which describe the project. We will present and review these documents with the City of Edinburg at key stages, typically at 30%, 80% and 100%.

Bidding and Negotiation | During this phase we will answer questions from bidders, issue clarifications and addenda if necessary. Once the bids are received we will work with the Owner to evaluate and rank offers. This includes review of pricing and scope and reference verification. Once complete we will make a written recommendation to the City of Edinburg.

Construction Administration | We will attend construction meetings, review submittals and perform site observations. We will manage construction correspondence including Architect's Supplemental Information, Requests for Information, Proposal Requests, and Construction Change Directives. During this time we will issue field reports and present construction updates to the Owner. We understand the importance of this phase and will be available promptly to resolve issues and problems at hand.

Project Closeout | At the closeout of the project we will perform substantial completion punch list walk through with Owner personnel and the contractor to verify completion. We will review the closeout documents submitted by the contractor including User and Maintenance manuals, Record Documents and other closeout forms as required by the Owner and the contract. We will provide electronic copies of the Record Documents in ACAD and PDF format for future use.

One year Warranty Review | Prior to the expiration of the one year warranty we will walk through the project with the Owner and the contractor to review and address any deficient items which need correction and is covered by the warranty.

Project Approach & Quality Control

Plan & Specifications Reviews | Standardized plan and specification reviews will be performed to provide a mechanism for the project to be assessed and for any areas of concern to be addressed accordingly. This will provide the opportunity to meet quality, time and cost goals for the construction of the project. During the initial review we will also ensure that the plans and specifications adhere to the program narrative and recommend any alternative solutions to avoid material procurement delays, potentially saving time and money through the process of value engineering.

Construction Phase Quality Control | Our goal is to avoid an unnecessary delays in the construction and provide the City of Edinburg with the support required to coordinate the project. We will conduct on-site observations of the work in progress, monitor the conformance with the contract documents and provide reports for items of concern that need to be coordinated in order to avoid delays or cost implications. The thorough and expeditious review of submittals, shop drawings, and requests for information is key to avoiding delays. Meeting notes regarding the progress, schedule, and budget will be provided as a record and to assist in formulating action plans for resolution of construction problems or conflicts.

Schedules | Our team prides itself in maintaining project schedules with all of our current and past projects. We will create a master schedule to account for key dates from preliminary design through construction and identify items that will impact the project sequence such as critical submittals and coordination of equipment delivery. Scheduling regularly occurring meetings with the City of Edinburg project team will ensure that project momentum is maintained. Our goal is to consistently review the construction schedule and identify any areas of concern, report them during progress meetings and follow-up with the proposed resolution. Using these methods we have been able to complete projects successfully and on time.

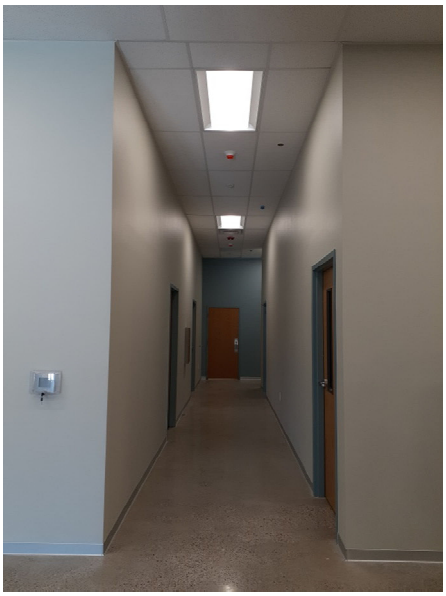
Budgets | At the outset of the project, we will work closely with the City of Edinburg to create a master budget which takes into account soft costs (professional fees, permit fees, printing, regulatory costs and other fees), Fixtures, Furnishings, and Equipment (FF & E) and Construction Costs to arrive at a true bottom line. Our goal is to issue a monthly budget update that is consistently compared against the approved construction cost estimate to ensure conformity. We have experience reviewing and processing payment applications and comparing the schedule of values against the project schedule to ensure that payment to the contractors is appropriate given the project progress.

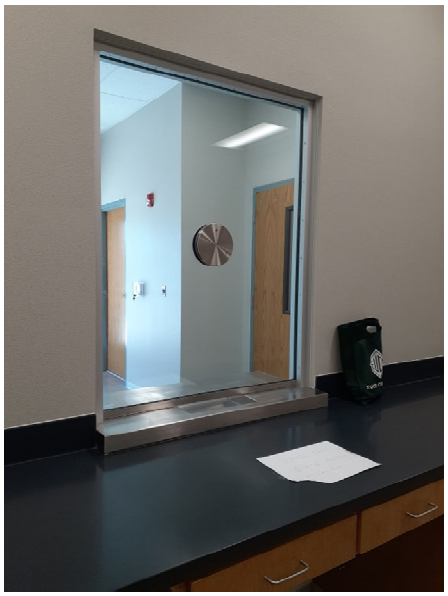
Project Name: El Tule Recreation Center
Location: Edinburg, TX
Owner: City of Edinburg
Owner Rep.: Mardoqueo Hinojosa
(956) 388-8955

Const. Cost: $ 4,997,600.00 (Estimated)
Project Size: 28,445 Sq. Ft.

Services Provided: Full Architectural
Project Manager: Ramon Villalobos
Project Architect: Rodolfo Molina

Substantial Completion: January 06, 2023 (Estimated)





Project Description:
This project consists of the construction of a new 28,445 sq. ft. indoor recreation center facility for the Edinburg Economic Development Corporation. The interior of the facility includes three full size basketball courts with dividing folding partitions and wood flooring. The lobby area consists of a large gathering area, a conference room, concession stand and restrooms.

The project is located at 702 S. 18th Ave., Edinburg, Texas 78539.

Project Name: New Fire Station #5

Project Size: 15,260 Sq. Ft.

Services Provided: Full Architectural
Project Manager: Ramon Villalobos
Project Architect: Rodolfo Molina

Project Description:
An existing 8,906 Sq. Ft. facility that was converted into the new city hall for the city of La Joya. The scope of work also included a new 6,354 Sq. Ft. public safety building addition that was built adjacent to this facility. These facilities meet the current needs of the City and will accommodate the City's future growth for years to follow. This project was completed in August 2018.

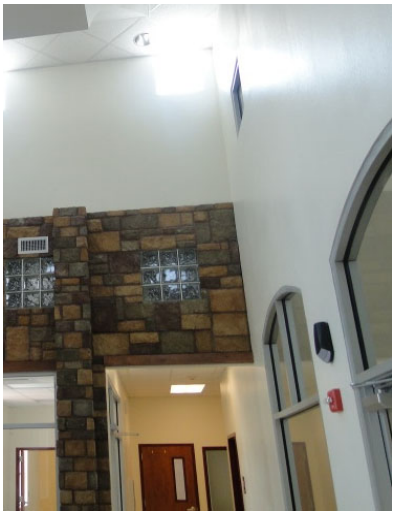
Project Name: New Public Safety Building
Location: Raymondville, TX
Owner: City of Raymondville
Owner Rep.: Uvaldo Zamora
(956) 689-2441

Const. Cost: $ 1,200,000.00
Project Size: 9,033 Sq. Ft.

Services Provided: Full Architectural
Project Manager: Ramon Villalobos
Project Architect: Rodolfo Molina

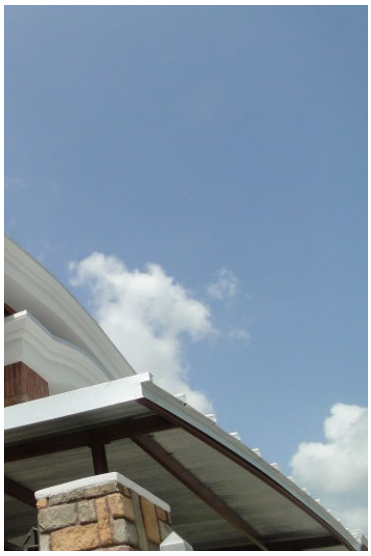
Project Description:
A new 9,033 Sq. Ft. facility for the Raymondville Police Department. This project was in collaboration with Guzman & Munoz Engineering (Milnet served as the Architectural Consultant). Project was completed on time and within budget. This project was completed in December of 2015.

Project Name:	City Hall Renovations
Location:	Raymondville, TX
Owner:	City of Raymondville
Owner Rep.:	Eleazar Garcia (956) 689-2443
Const. Cost:	$ 322,132.00
Project Size:	10,800 Sq. Ft.



Services Provided: Full Architectural
Project Manager: Ramon Villalobos
Project Architect: Rodolfo Molina

Project Description:
Renovations to the existing city hall for the City of Raymondville. These included removing existing flooring and installing new V.C.T and tile floors, repainting of existing interior walls, removal of exterior façade including existing wood roof shingles and installing new stucco finish with architectural stone veneer and EIFS. The project was completed on time and within budget. The existing city hall was kept open for business during construction with careful planning and relocation of staff. This project was completed in March of 2009.



Project Name: Rural Technical Skills Training Distance Learning Small Business Incubator Center
Location: Raymondville, TX
Owner: City of Raymondville
Owner Rep.: Eleazar Garcia (956) 689-2443

Const. Cost: $ 1,863,250.00
Project Size: 14,263 Sq. Ft.

Services Provided: Full Architectural
Project Manager: Ramon Villalobos
Project Architect: Rodolfo Molina

Project Description:
A federal grant project for the City of Raymondville in cooperation with the U.S. Department of Commerce Economic Development Administration and U.S. Department of Housing and Urban Development, this new facility houses the small business incubator center from the local chamber of commerce as well as a training distance learning center for the University of Texas at Brownsville/Texas Southmost College.

The team we select for a project is chosen based on experience with project type, scope of the project and technical ability. This specialized team will remain associated with the project throughout its life, we do not "hand off" a project to a different team or personnel. The personnel assigned to the City of Edinburg project will be as follows:

Rodolfo Molina, AIA | PRINCIPAL IN CHARGE

As President and Architect in Charge of the project, Mr. Molina will be responsible for maintaining adequate staffing levels and setting the expectations for the project. Mr. Molina will be responsible for ensuring quality levels meet or exceed the Milnet Architectural Services high standards. He will be in charge of attending meetings, developing short range work plans and budget studies. Mr. Molina will spend 20% to 85% of his time on the project, depending on project phase and immediate requirements. Mr. Molina has more than 40 years of experience within the architectural field and 25 years of leading the team at Milnet Architectural Services.

Neftali Cruz | PROJECT MANAGER

As Project Manager, he will be responsible for overseeing the planning, design, and construction phase of the project on a day to day basis. Neftali reports directly to Rudy Molina and manage the flow and distribution of information to the project team. He chairs the project meetings, takes the minutes, documents them and distributes them among the team members. He attends meetings, working closely with the Project Architect to maintain communications and work schedules among all team members. Neftali will spend 30% to 70% of his time on the project, depending on project phase and immediate requirements. Neftali has more than seven (7) years of experience within the architectural field and has been with Milnet his entire career.

Ruben Hernandez | PROJECT MANAGER

As Project Manager, he will be responsible for overseeing the planning, design, and construction phase of the project on a day to day basis. Ruben reports directly to Rudy Molina and manage the flow and distribution of information to the project team. He chairs the project meetings, takes the minutes, documents them and distributes them among the team members. He attends meetings, working closely with the Project Architect to maintain communications and work schedules among all team members. Ruben will spend 50% to 100% of his time on the project, depending on project phase and immediate requirements. Ruben has more than sixteen (16) years of experience within the architectural field and has been with Milnet for approximately 2 years.

Mirtha Uranga | PROJECT MANAGER & INTERIORS SPECIALIST

As Project Manager, she will be responsible for overseeing the planning, design, and construction phase of the project on a day to day basis. Mirtha reports directly to Rudy Molina and manages the flow and distribution of information to the project team. She chairs the project meetings, takes the minutes, documents them and distributes them among the team members. As the Interiors Specialist, she will also be responsible for coordinating any and all color selections with the City and selecting interior finishes. She will remain on the project from inception through completion. Mirtha has twenty (20) years of experience within the architectural field. Mirtha will spend 10% to 100% of her time on the project, depending on project phase and immediate requirements.

Daniel Soliz | DESIGNER

As our designer, he will produce all design work including the development of details and drawings under the supervision of our licensed Architect. He will oversee the placement of the drawings in BIM and will be responsible for translating the Project Architect's design into design documents. Daniel will spend 10% to 100% of his time on the project, depending on project phase and immediate requirements.

Gerardo Zuniga | DESIGNER

As our designer, he will produce all design work including the development of details and drawings under the supervision of our licensed Architect. He will oversee the placement of the drawings in BIM and will be responsible for translating the Project Architect's design into design documents. Gerardo will spend 10% to 100% of his time on the project, depending on project phase and immediate requirements.

Paola Morales | DESIGNER

As our designer, she will produce all design work including the development of details and drawings under the supervision of our licensed Architect. She will oversee the placement of the drawings in BIM and will be responsible for translating the Project Architect's design into design documents. Paola will spend 10% to 100% of his time on the project, depending on project phase and immediate requirements.

Carrier	AllState Insurance Co.
Agent	Ignacio Puente Insurance Agency (Allstate)

Litigation | Milnet Architectural Services, PLLC nor it's principals or employees are involved in any unresolved or ongoing claims, disputes or litigation. We pride ourselves in having a team who takes ownership of their work, has a professional approach to client services and most importantly maintains a highly ethical code of conduct. Past client relationships have afforded us the opportunity to practice as professionals in the industry and gain the experience necessary to provide the services required in this proposal. Milnet has not had any insurance claims within the past 5 years.

Equal Opportunity Employer | Milnet is Certified as a Historically Underutilized Business and an equal opportunity employer that strives to utilize Historically Underutilized Businesses as well as small, minority and women owned businesses as much as possible in its projects. These include M.E.P., Civil, and Structural Design Firms as its consultants.

Non Discrimination | Our firm is an equal opportunity employer. All employment decisions including recruitment, placement and promotion of individuals within the Firm shall be made without regard to sex, age, race, color, creed, national origin, religion, or non-disqualifying physical handicap and in conformity with all applicable federal, state and local laws and regulations.

Policy Against Harassment | The Firm encourages all employees to treat one another with dignity and respect. It is illegal and a violation of the Firm's policy for any employee, male or female, to harass another employee. The purpose of this policy is not to regulate our employee's personal morality. Rather it is to assure that in the workplace no employee harasses another on the basis of sex or other conduct. Any employee who engages in such conduct is subject to appropriate disciplinary action, including immediate termination.

Milnet Architectural Services PLLC acknowledges that the Professional Services Agreement has been read, we will meet the prerequisite insurance requirements and, if selected, agree to enter into such agreement for services with the City of Edinburg.

Our past years of services to municipalities has provided Milnet the opportunity for experience that will prove beneficial to the City of Edinburg. Milnet's approach to project implementation has a proven record of delivering projects successfully within budget and on schedule. We look forward to providing the City of Edinburg with the quality of service to meet and exceed expectations.

As a firm having done business in this region for over twenty-two years, we pride ourselves in the reputation we've established, the longevity of client relationships and stability of the team we have ready to work with the City of Edinburg.

We appreciate your consideration and look forward to the opportunity to serve the City.

Re: RFQ 2024-8 – ARCHITECTURAL SERVICES ROTATION for the City of Edinburg

Dear Mardoqueo Hinojosa,

ORANGE MADE is proud to submit this response to be on the architectural services rotation for the City of Edinburg RFQ# 2024-8. We are humbled to have the chance to share who we are and how we can contribute to your mission. ORANGE MADE will celebrate 11 years in business this October. We have not gotten here alone and are honored every time we give to our community through architecture. Our purpose is to ELEVATE architecture in the Rio Grande Valley. It is through the trust of our clients, and the persistence of asking ourselves each day if we are upholding the values and the purpose, we set out to accomplish, that we have grown into who we are now.

Though our work has diversified to include complex projects with a wide range of institutional clients and funding requirements, we have never lost our focus on the details that enrich the experience of the places we help make. We are conveniently located in the Rio Grande Valley, in McAllen, which will allow us to provide frequent and attentive administration to project sites in Edinburg. We work closely with consultants and contractors to create efficient responses that maintain your budget and schedule.

The firm is responsible for numerous community + public projects including Master planning for the City of McAllen's Quinta Mazatlán, the City of Mission's Leo Pena Placita Park Renovations, and various commercial, professional, and medical offices. The firm's experience includes collaboration on the redevelopment of the Pharr Civic Center which included the addition of their Parks & Rec offices, and currently under construction, a new corporate headquarters for Texas National Bank, in McAllen and a new branch in Edinburg, for Greater State Bank. We are also part of the on-call rotation for TSC in Brownsville. Our references can attest to our quality of service.

The adjoining qualifications are a small representation of who we are, but show the variety of work we can do. We very much believe that we would be a great fit for the work and would cherish the opportunity to prove that to you and be a part of the team to help Edinburg reach its goals.

With gratitude,

FIRM PROFILE

Orange Made was established in 2013 by husband and wife team, Erick Darbo Diaz and Carolina Civarolo. The two co-founders knew that there was great opportunity to be able to impact the growing community of the Rio Grande Valley. Orange Made offers a group of designers that are excited to collaborate with clients and the community to bring forth positive change. We are deeply inspired by what design can contribute to our community.

ORANGE MADE specializes in designing different types of buildings including commercial, civic, educational, and residential. Additionally, the firm provides services for renovation and historical preservation, urban design, master planning and feasibility studies.. We choose to take on projects based on the collaborative potential of the client relationship, not just the construction type. Working with public entities gives us the opportunity to truly impact the community on a larger scale.

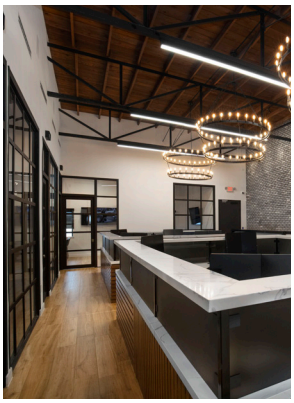
ORANGE MADE IS AVAILABLE AND CAPABLE.

The studio realizes that every project is unique in relation to its program, context, budget, and schedule. This challenge provides an opportunity to question, understand, and evolve the design and construction processes to ultimately arrive at an innovative solution. We have worked with a diversity of clients in multiple settings, each with unique design and construction standards. Through this we have gained the experience in working with and adapting to every client. We are flexible and can easily conform to very specific client requirements.

Each project is unique, so depending on the scope of work, the Partners tailor who will be the project manager and main point of contact. Carolina and Erick have over 40 years of combined experience on all types of work and are very hands-on with every project that comes through the office. They will be involved in a project from start to finish and can always be counted on to resolve any issues at hand. Client support is extremely important to us here at Orange Made. We know how important our clients are to our future growth, thus meeting and exceeding our clients needs will ensure our survival. Architecture has the ability to influence many generations and we do not take that lightly.

ORANGE MADE IS WILLING TO PROVE ITSELF, GIVEN THE OPPORTUNITY.

HOUSE ON ORANGE McAllen, Texas



You may be wondering . . .
"why the name ORANGE MADE?"

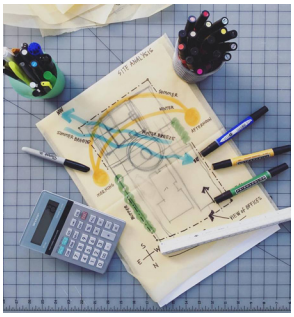
In 2005, fresh out of architecture school, Erick + Carolina took it upon themselves to create a residence in central McAllen to better understand fundamental design + construction and to bring something different to the area. This project is located on the corner of ORANGE avenue and stands as a billboard of their first project together and their purpose of elevating architecture in the RGV. So naturally the name MADE sense.

ORANGE MADE
architecture

FIRM DETAILS & PROJECT EXPERIENCE

ORANGE MADE is an architectural firm that has provided services for over 200 projects across the Rio Grande Valley. We have worked with various private and public entities and have a proven track record of success. We believe that communication is key to achieving successful outcomes, and we strive to listen to each specific entity's needs. As a part of our process, we always seek to find innovative ways to achieve our clients' goals. We are always available to meet with public entities as requested, and we make presentations to all key players to ensure that everyone is a stakeholder and invested in the project's success.
We believe civic architecture should prioritize people with public spaces that function well and engage the community. This requires thoughtful design that leverages public funding to provide efficient, sustainable, inclusive, and durable developments. Successful civic architecture withstands high use and modest maintenance budgets.

ORANGE MADE is always aware of the client's schedule and budget restraints, and has always delivered on the projects we are involved in. Being located minutes from the city of Edinburg projects' sites and from the City planning offices is key to servicing our client and getting things worked out quickly, especially during construction. Successful project delivery occurs because of a tried and proven process. Strong design solutions are the result of a collaborative, interactive process led by the design team that involves all stakeholders, including users, community residents, and specialty consultants. Careful attention is given to achieving a balance between building, surroundings, landscape, and site/s specific issues.



Commercial/ Municipal / Civic / Master Planning and Urban Projects
Our portfolio includes an variety of projects for public entities.
The following is a selected list of these projects:

- Texas Southmost College - On-Call Architectural Services Rotation 2024
- Weslaco ISD - On-Call Architectural Services Rotation 2023-2024
- UT System Brownsville - UT Health: School of Public Health
- City of Mission – Leo Pena Placita Park Renovation
- City of Pharr – Jose Pepe Salinas Memorial Civic Center Renovation
- City of Pharr – New Parks + Recreation Offices
- City of McAllen - Quinta Mazatlán Master Plan
- City of McAllen - Technology Park Master Plan

Two most recent projects in the City of Edinburg are the Renovation of Terry Canales Law Offices in Downtown Ediburg and a new branch for Greater State Bank that will start construction this coming month.

Orange Made is familiar with the building codes adopted by the city of Edinburg and is familiar with more recent building codes should the city adopt new codes. Specifically, we have successfully permitted numerous projects, ranging from new construction to renovation projects following the International Building, Fire, Mechanical, Electrical, Plumbing, and Energy Conservation Codes. In addition, we are familiar with accessibility codes and standards including ICC a117.1, ADA 2010, UFAS, Fair Housing, and TAS 2012.

ORANGE MADE architecture

PROJECT SCHEDULING, QUALITY & COST CONTROL

PROJECT SCHEDULING

Ensuring projects meet client goals for schedule depends on three critical factors:

- The project schedule must be complete, well thought out, based on real project experience and inherently achievable.
- The entire project team, including all consultants and the owner, must understand and be committed to meeting the schedule.
- The project's process must be regularly tracked and monitored.

We meet our milestones through continuous monitoring, strong consultant management, streamlined decision-making processes and fast-track project delivery methods. When schedules are compressed, we will streamline the decision-making process by facilitating work sessions with project stakeholders. Once a schedule is established, we are committed to meeting the schedule and use a variety of tools to do so.

We maintain schedule by:

- Developing a detailed schedule based on historical and institutional knowledge with the Owner.
- Fostering a team approach that engages the Owner, Users, CMAR/Contractor and Design Team.
- Aggressively monitoring the schedule throughout the project and making adjustments without impacting client move-in dates.
- Clearly communicating expectations to the entire project team.
- Maintaining an issue tracking system that lists issues, critical resolution dates, and documents their resolutions.
- Facilitating design workshops that build consensus and thus reduce approval times.
- Working with facility departments and end users to streamline decision making.

On our past projects with public and private entities, we have always upheld our end of the work. We have been true to the budgets and schedules of the projects. If the points above are met, and communication and expectations are clear, the project will most typically succeed. An important factor is also having a contractor that is capable of performing the services. All three parties, Owner, Architect and Contractor, are key to a successful project

THE CONSULTANT TEAM

Communication is the most important part of collaboration. At the onset of a project our team will establish protocols for communication to ensure everyone on the team is included on all pertinent information and that the owner is never excluded from important discussions.

We select sub-consultants primarily by their qualifications and ability to execute the project at a high level. We believe all successful projects are the result of true collaboration of the team of experts we put together. It is our responsibility to provide the consultants with the information and tools they need and to provide a platform for this collaboration to work.

Beyond communication it is important to set expectations for the sub-consultants. Our team provides our sub-consultants with detailed deliverable lists for each project milestone. This ensures that we receive what we need to progress that project and provides an outline for our subconsultant to work from.

PROJECT DELIVERY BY PHASES

The following design phases and tasks can be modified for specific project needs such as expedited projects, long-term phased projects, or other types of projects. Our team would work with the appropriate decision makers to fine tune those specifics and adjust the implementation timeline accordingly.

DISCOVERY AND UNDERSTANDING

Our strategy encompasses in-depth analysis of current conditions and understanding of the needs and inspiration of the City of Edinburg and its stakeholders. It requires a structured process that drives engagement and working closely with the city staff and defining the requirements related to function, cost and schedule for any specific project. Realistic expectations from the onset of the project are the key to success.

SITE ANALYSIS

Our team will conduct on-site analysis at the city's existing structures and new potential development locations. Our analysis would consider but is not limited to issues such as: location, as-built conditions, existing utilities and infrastructure, movement, site accessibility, pedestrian and or vehicle-circulation, parking, and historical or any other factors that might impact the design.

SCHEMATIC DESIGN

At this phase, or design team will provide design reviews and refine the design requirements with input from city's team and consultants, while engaged in the regular meetings with the city representatives to assert approval of the design requirements and developing a preliminary opinion of probable cost.

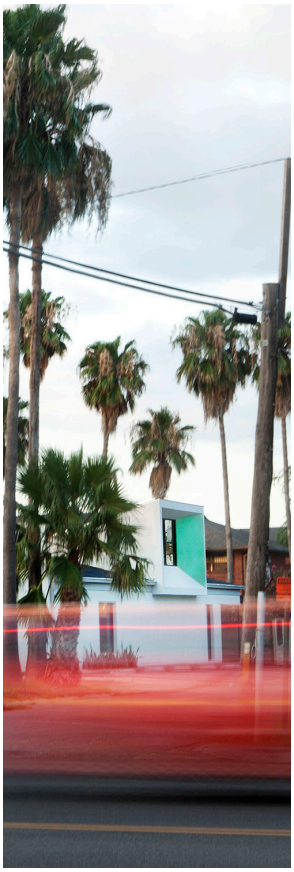
DESIGN DEVELOPMENT

Through the design development process, our team will collaborate with city's engineering staff and representatives of the stakeholders and consultants to review and discuss design concepts and preliminary plans and studies before deciding on the best alternatives for the project.

CONSTRUCTION DOCUMENTS

Our team will work on the construction documents and specifications. During this phase, working closely with the client to ensure all project needs are being met. Coordination with the consultants is of utmost importance during this phase to make sure plans are coordinated and schedules are met.

BIDDING AND NEGOTIATION



Our team will assist the City in answering bidder's questions and reviewing contractor selection. We will aid the City in any negotiations with the Contractors as needed.

CONSTRUCTION ADMINISTRATION

Our team we will be working closely with contractors in utilizing the contract documents to ensure smooth implementation of the contract in accordance with the construction specifications and standards. Our team will complete all necessary tasks and tackle unanticipated conditions or problems encountered during construction to achieve our shared goal, and ensure full client satisfaction at the end of the project.

ORANGE MADE architecture

PROJECT APPROACH

GENERAL UNDERSTANDING

ORANGE MADE acknowledges the ongoing efforts of City of Edinburg to improve quality of life experiences, provide excellent services, prompt opportunities for growth, strengthen the sense of community and engagement, and create vibrant, safe and entertaining environments for all. At ORANGE MADE, we strive to involve stakeholders and city leadership in project planning. We have extensive experience with various funding sources and projects. We begin each project by summarizing goals and objectives and assessing all needs for the project to be successful.

STRATEGY

Communication is the most important part of collaboration. At the onset of a project our team will establish protocols for communication to ensure everyone on the team is included on all pertinent information and that the owner is never excluded from important discussions. Beyond communication it is important to set expectations for the sub-consultants. Our team provides our sub-consultants with detailed deliverable lists for each project milestone. This ensures that we receive what we need to progress that project and provides an outline for our sub-consultant to work from.

Our deliverable lists are tied to our project schedules. In order, to make sure our team stays on schedule, we have minor milestones within the schedule for interim project reviews with our sub-consultants. These reviews allow for project information to flow in both directions. It can show us what information our sub-consultant still needs from us and what information we need from them. It allows space for our team to provide their expertise so that other team members can understand important project drivers for our sub-consultant. Beyond interim team meetings, we have dates set up for internal project quality control.

We regularly use technology tools to aid in team coordination. We use 3D modeling software REVIT and cloud-based BIM 360 whenever possible. These technologies provide real-time data to all team members communicating evolving designs. The software also detects system "clashes" and helps to identify conflicts between disciplines.

OVERALL APPROACH

Our strategy for meeting schedules, budgets, and deadlines is based on a thorough understanding of the necessary actions to achieve quality results effectively and efficiently. For each project, ORANGE MADE follows a structured approach to complete each phase. We meticulously plan each phase by scheduling specific tasks and milestones, identifying review and approval points, and defining the roles and responsibilities of all team members. This structured approach enhances management efficiency, reduces unexpected project complications, and ensures that the client is consistently informed about the project's status.

We believe in quality control and proactive construction management as the key to maintaining quality in construction. We believe establishing quality control principles, procedures and clear expectations, is essential in the early phases of construction. We look for and anticipate discrepancies that might otherwise lead to undesirable results and take immediate corrective action to minimize cost and schedule implications. Managing communications and directives is critical to this effort. The flow of information between ourselves and consultants, contractors or owners is logged and tracked so we are able to precisely know when any project information or document was delivered to any individual.

The client was looking for a new look that meshed well with their other branches but could also relate to the Rio Grande Valley. The new branch design focuses on an entry tower that allows greater visibility, and the use of metal awnings, decorative ironwork, terracotta brick, and painted tile designs. A welcoming entry lobby, open teller areas, boardroom, restrooms, lounge areas and a motor bank are all part of the spaces.

Located in downtown Edinburg, Terry Canales Law sits in a completely renovated space. A welcoming Lobby space leads you to several conference rooms on one half of the building. The other half consists of an open bull pen and copy station surrounded by offices and a large employee lounge. one highlight of the space is a library holding hundreds of law books with a small loft area. The exterior of the building was changed to add windows and canopies along with a brick wall that shields the entry steps and ramp leading to the main entry.

The project was a complete renovation of the existing 16,000 SF Jose "Pepe" Salinas Memorial Civic Center to be re-purposed into a Youth Recreation Center. Facility will have multi-purpose area and individual classroom areas, new restrooms, grad lobby, concession, organized storage facility for Pharr Parks and Recreation, a large meeting/voting hall, a theatrical stage facility along with an indoor rock climbing structure. Adjacent, but disconnected, will be a new 6,200 SF facility for the Parks and Recreation Department that will house largely office space and Recreation Department that will house largely office space to administer the City programs for Pharr's Parks and Recreation Department. The Youth Recreation Center will receive updated infrastructure, a new updated exterior and new windows allowing natural light to filter into the space. An updated palette of finishes and new floor plan layout gives the building a fresh new feel. Thoughtfully incorporated existing trusses, LED lighting, metal ductwork and playful details contribute to a unique project.

This project was a design collaboration between Diseno, Inc + ORANGE MADE.

SCOPE
Architectural / Engineering

This parks serves as one of the main venues for outdoor events in the City of Mission. Located in downtown, the existing 2.5 acre city park had fallen into a state of disrepair. Renovations, being funded in part by a federal grant, required the new design to address accessibility within the park and at the same time provide a safer and more inviting atmosphere for residents.

The proposed design focuses around the large, existing oak trees which surround the new amphitheater to provide much needed shade. A large steel shade structure is set in the center of the amphitheater to create a focal attraction to the park and also provide additional shade. The new design incorporates more lawn seating, new hardscape, vegetation and designated areas for vendors to set-up during events.

Orange Made collaborated with various consultants and the City of Mission to integrate a new vision for the park and amphitheater in the existing environment.

This project was a design collaboration between ORANGE MADE, NOMA + CHANIN Engineering.

The first center of this type to be licensed in the State of Texas, can most easily be described as a medical daycare for children under the age of 18. We helped the client create a master plan for the property that includes a second phase that houses the client's home hospice headquarters. The PPECC project has a central lobby that divides the building into two wings, one for office areas and the larger wing for the children's classrooms, nursing station, restrooms, and therapy rooms. On the exterior is the use of siding, to give a smaller scale residential feel along with an interior palette of colorful pastels to make the space welcoming, yet playful and allow the children to feel comfortable.

AFTER CLASSROOM

We provided design, construction documents, bidding + negotiations and construction administration services. Scope of work on the first floor was to address acoustical issues in a large Multi-Purpose/ Student Commons room. The solution included adding carpet, acoustical ceiling treatments and adding electrical/data for additional video conferencing scenarios requested by the client
On the second floor, a large computer lab was split into two separate video conferencing classrooms. Existing mechanical, lighting, sprinkler and audio/visual systems were modified. Special care was taken in the walls and ceiling conditions to make sure the classrooms were acoustically sound for the new needs of the spaces.

Texas National Bank reached out to our firms ten years ago to design a new banking center on this prominent site along 10th St in McAllen, Texas. The project has evolved from a single-story banking facility to a four-story, state of the art, headquarters for the community bank. The new 65,000 SF facility will continue to house a banking facility on the ground floor. In addition to banking facility, the bank wanted to expand and consolidate their operations departments into one site, therefore, operations were incorporated on levels two and three, with executives accommodated on the fourth floor. The Annex Building was integrated into the project to take advantage of our talented local chefs and restaurateurs in the region. Additional office space for bank operations was added on the second floor. Adjacent to the building is a public plaza with native plant material and a water feature thoughtfully designed to attract birds and butterflies as they migrate through our region. The plaza is also designed to be used as a public space for events and activities for the community.

This project was a design collaboration between Diseno, Inc + ORANGE MADE.

The architects were given the task of developing an architecture style that would serve as a prototype for a local financial institution and to represent the "feel" of deep South Texas. The architectural product developed around transparency, high volumes, exposed structure, natural finishes and a natural color scheme. All strong characteristics of the "feel" of our South Texas. The client also sought to create a more modern aesthetic for their new branch. As the banking world and technology evolve, they wanted flexibility within their facility. The high volumes, open space and natural light create an inviting atmosphere for both the client and their customers.

This project was a design collaboration between Diseno, Inc + ORANGE MADE.

Erick Diaz, AIA
ORANGE MADE

Orange Made was hired by the City of McAllen to come up with a vision for the new Quinta Mazatlán Palm House. As we began to create the concept for the building, we quickly realized this project was much larger than the building itself. Therefore, we proposed a conceptual master plan that was translated into a physical model which was utilized for fundraising and marketing purposes. The model helped show a vision for the many program elements that complement each other on the site and create various points of interest for visitors. These elements included the Palm House, a restaurant, an amphibian and aviary center, skywalks, boardwalks, tree houses, and a gateway entry, all set within a native landscape.

Quinta Mazatlán has a unique opportunity to create a destination where people from our region and Mexico can discover and interact with nature, animals, native habitat, parkland, local artwork/ sculpture, historic and new architecture. We based the Palm House design on the plan concept of the traditional hacienda, paying homage to the existing building. Orange Made worked with the key members of the QM Advisory Board, and the City of McAllen to bring out that vision, which in the end, secured state funds that allowed the project to move forward.

A native of the Rio Grande Valley, Erick attended the University of Houston, Gerald D. Hines College of Architecture, and received a Bachelor of Architecture in 2003. Upon his graduation, Erick was awarded the Hines Internship and worked alongside internationally recognized architect Oscar Tusquests Blanca in Barcelona, Spain.

Upon his return to the Rio Grande Valley in 2004, Erick practiced with a local architecture firm, Diseño Inc., where he collaborated for several years on residential and commercial projects throughout Texas and Mexico.

In 2009, Erick joined the University of Texas at Brownsville and Texas Southmost College as a faculty member, where he served the university in many capacities. During his tenure, along with his teaching duties, he assisted in developing the architecture program, served on several university committees and integrated service learning into his course work.

In 2012, Erick returned to the University of Houston, where he completed a Master of Science in Architecture from the Gerald D. Hines College of Architecture with a concentration in Urban and Suburban Design. During his master's, Erick participated in two study abroad programs that led him to Spain, Italy, Germany and Austria. He was awarded with the best Master's Project for his research.

He serves as an advisory board member for the Architecture Program at Texas Southmost College. in the past he has served as a community board member for the Rio Grande Valley Multibank Corporation, and an advisory board member for City of McAllen Community Development Council and Zoning Board of Adjustments and Appeals. Erick is also an active member of the Lower Rio Grande Valley Chapter of the American Institute of Architects, serving as President in 2022.

In practice for over a decade, Carolina, a Registered Architect and LEED Accredited Professional, has spent her career building experience through various design firms and projects. She began her professional career while attending the University of Houston, Gerald D. Hines College of Architecture. In 2003, Carolina worked in Barcelona, Spain for the office of Enric Miralles + Benedetta Tagliabue (EMBT). While in Spain, she gained a passion for graphics and presentations and now greatly enjoys the early phases of design in projects. For seven years, Carolina was a crucial member for the local architecture firm Boultinghouse Simpson Gates Architects. At BSG, Carolina collaborated on different building types of different scales and gained experience as a project manager working on all phases of architecture.

Today, Carolina is co-founder and COO at ORANGE MADE, an architecture studio that explores the process and impact of design and construction of various building types, master planning and adaptive re-use of existing structures. Carolina believes that our clients' ideas help motivate our solutions.

Carolina was born in Cordoba, Argentina, grew up in Houston, Texas and has now resided in McAllen for over a decade. She enjoys time with her family and looks forward to making an impact in the Rio Grande Valley community through design.

She serves as an advisory board member for the City of McAllen CDBG & Historic Preservation Council, the Architecture Program at Texas Southmost College and the South Texas College - Architectural & Engineering Design Technology Program. In the past she has served on the Executive Board of the Rio Grande Valley American Institute of Architects Chapter as Secretary/ Treasurer + Vice President and on the City of McAllen's Building Board of Adjustments and Appeals.

Project Manager
Production Team Leader

Eliazar is an experienced production team leader with over 35 years of expertise in new and renovation construction projects across various sectors including educational, municipal, religious, commercial, and corporate.

His career reflects a unique blend of technical aptitude and creative ability, allowing him to contribute effectively across all project phases such as schematic design, design development, construction documents, and construction administration.

His career began as a draftsman in the late 1980s and he has since held project management roles at well-known architectural firms including ROFA Architects, Inc., DISEÑO, INC., and Morales-Best Hinojosa Architects, Inc.

Eliazar recently joined the Orange Made team as the Production Team Leader to bring innovation to production operations and provide mentorship to the Studio Team.

Design Leader

LUIS MAURO MURILLO

Joining ORANGE MADE in 2023, Luis has joined the team as a design project manager, with design skills and experience in community engagement. He has a strong work ethic, and enjoys the community aspect of each project he works on and greatly enjoys historic preservation of buildings. His experience with buildingcommunityWORKSHOP is invaluable to the team, form which he brings much experience in the world of non-profit work.

As a Brownsville native, Luis has personally experienced the multifaceted issues that the community faces. Luis gained experience in building code analysis through interning for the City of Lubbock Building Inspections Department. Through the implementation of new ideas and thoughtful design he works to solve environmental and social issues in the community. He aspires to make an impact and create positive change in the RGV.

Luis serves the community on different levels. He currently presides as chair of the Texas Southmost College Architecture Program Advisory Board and the Historic Preservation Design and Review Board for the City Of Brownsville. He serves on the Texas Architect Magazine Publications Committee and the LRGV AIA Continuing Education Committee.

PEDRO ALAN CORREA HARO

Pedro Correa has over eight years of experience in architectural design, construction documentation, and estimation. He has enhanced his skills in design development, construction practices, and principles for all phases of projects, including planning, estimating, design, and inspection. He is passionate about design and construction and constantly strives to provide excellent service for clients through careful attention to details for commercial and residential structures.

As a Design Associate at Orange Made, Pedro is responsible for developing construction packets in compliance with building codes, zoning laws, fire regulations, and other ordinances. He also prepares contract documents with building contractors and conducts periodic on-site observations of construction projects.

#5 insurance

ORANGE MADE LLC and its associated consultant team will meet all insurance requirements as needed, if awarded a contract as a result of this solicitation.

Copy of current certificate provided in submission portal.

We will provide evidence of coverage to the City as required for each project.

ORANGE MADE, LLC maintains the following insurance policies:

Architects & Engineers Professional Liability Insurance Policy

This policy covers errors and omissions.

Coverage type is “Claims-Made” with (2) two million dollar / occurrence and (4) four million dollar / aggregate

Commercial Property & General Liability Insurance Policy

Coverage type is “Per Occurrence” with (2) two million dollar limit per claim.

Worker's Compensation Coverage of (1) one million dollars.

#6 professional service agreement

The professional services agreement provided in the RFQ package has been read, and ORANGE MADE LLC will meet the prerequisite insurance requirements, and the firm, if selected, agrees to enter into such agreement.

RE: Request for Qualifications RFQ # 2024-8
Architectural Service Rotation

Dear Ms. Hinojosa:

On behalf of the partners and staff of Rike Ogden Figueroa Allex (ROFA) Architects, Inc., I thank you and the City Commissioners for this opportunity to submit our qualifications.

Rike Ogden Figueroa Allex Architects, Inc. (ROFA) has provided professional architectural/engineering services to public education clients from Brownsville to Zapata. Projects include from elementary to high school, CTE facilities, early college and specialty high school campuses, athletic facilities, stadiums, performing arts, natatoriums and administration buildings. We have worked successfully on small and large construction projects and are eminently aware of construction trends and costs by small and large construction companies in the Rio Grande Valley.

Our firm, a fourth generation of Architects and Partners, has committed our practice to the Rio Grande Valley since its founding in 1947. Our experience has been extensive in working with State, County and Municipal Governments in addition to School District and nonprofit organization Valley wide.

We thank you for this opportunity to submit our qualifications and enthusiastically express our sincere interest and commitment to partner level participation on your new proposed projects.

The following principals are named to make authorizations and final contract negotiations:

Luis A. Figueroa, AIA — Principal
Tele: 956-686-7771 — Email: luis@rofainc.com

Humberto Rodriguez, AIA — Principal
Tele: 956-648-0742 — Email: humbertor@rofainc.com

Michael Allex, AIA Principal
Tele: 956-245-7949 — Email: mikea@rofainc.com

We are available to address any questions you may have and to present our firm in greater detail to City of Edinburg. Your consideration of our statement of qualifications is appreciated.

Sincerely,
Rike Ogden Figueroa Allex Architects Inc.

Luis A. Figueroa, AIA
Principal

Firm Qualification and Experience

2. Firm Qualification and Experience

Company Name, Location

Rike Ogden Figueroa Allex Architects, Inc. is a local architectural firm with it office located in McAllen.

Address

ROFA - McAllen
1007 Walnut Avenue
McAllen, Texas 78501
956.686.7771 **v**
956.687.3433 **f**

Humberto Rodriguez, AIA; Michael Allex, AIA;
Luis Figueroa, AIA; Cesar Roque, AIA

ROFA Architects is a firm with 4 Registered Architects and life long residents of the Rio Grande Valley.

Principals

Credentials: (4) in house architects.

Name of Partners:

Luis A. Figueroa, AIA-Principal
Registration No. 12856

Mike Allex , AIA-Principal
Registration No. 15101

Humberto Rodriguez, AIA-Principal
Registration No. 20224

Cesar A. Roque, AIA– Principal
Registration No. 29024

History

ROFA Architects Inc. was established in 1947 in McAllen Texas by Mr. Zeb Rike as Zeb Rike Architects. In 1968 after graduating from Texas A&M University and serving in the US Navy Mr. Dan Ogden joined the firm and in 1972 the firm name became Rike Ogden Architects. Then in 1978 and again in 1981 Mr. Luis Figueroa after receiving his post graduate degree from Texas A&M University joined the firm and was elevated to principal in 1985. Thus the name Rike Ogden Figueroa Architects Inc. Since, the firm has evolved in the inclusion and passing of other principal members of the firm. In 1993 Mr. Mike Allex, a graduate of Texas Tech University joined the firm becoming a principal in 1994 and in 2005 the firm received its current name Rike Ogden Figueroa Allex Architects, Inc. Most recently Mr. Humberto Rodriguez, AIA with 20 years of exemplary services to ROFA Architect's and our loyal client, was elevated to principal/owner status. Throughout its history ROFA has continued its original mission of service, stability, innovations and quality service to the Rio Grande Valley. ROFA Architects is a **corporation.**

2. Firm Qualification and Experience

ROFA Team

ROFA Architects has had recent experience with many municipal and governmental projects compared to the one proposed. These projects are comparable because the programmatic and spatial adjacencies/requirements for administrative offices, public services and public works are very similar.

Mr. Luis Figueroa, AIA, has previously experience working with various types of contracts for counties, cities, and other clients as stated below

Our experience with governmental agencies includes serval county, state, local and federal agencies.

Cameron County Court House Addition and Renovations

Cameron County Justice of the Peace Renovation and Expansion

2. Firm Qualification and Experience

McAllen Public Safety Facility

The new McAllen Public Safety Facility reflects the progressive growth of the City of McAllen. The facility is designed for future expansion of the police department.

Included within the facility are the following functions:

- Police Department
- Fire Department
- Municipal Court
- Emergency Operations Command Center
- 911 Dispatch Station

Completion:.....2003
Size:.....74,279 SF
Owner:.....City of McAllen
Contact:.....Mr. Yvette Barrera
.....City Engineer
.....(956) 681-1150
Cost:.....$ 8,050,000.00
Contractor:.....Peterson Construction

2. Firm Qualification and Experience

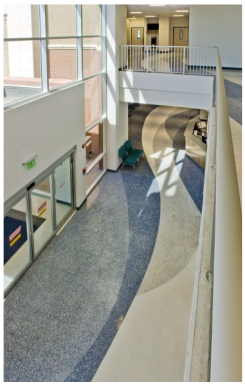
McAllen City Hall

The new McAllen City Hall reflects the progressive growth of the City of McAllen. The facility is designed for future expansion and each of the three levels respond to user related departments.

The facility includes a meeting room equipped with state-of-the-art technology for communications and cable broadcasting systems. A two station drive-through facility supports the utility department. Included within the facility are the following functions:

Utilities ..... Vital Statistics
Health ..... Personnel
Data Processing ..... Finance
Purchasing ..... Engineering
Planning ..... Inspection
City Manager ..... City Secretary
City Attorney ..... City Mayor
City Commission

Completion: .. 1995
Size: ..... 47,000 SF
Owner: ..... City of McAllen
Contact: ..... Ms. Yvette Barrera, P.E.
..... City Engineer
..... (956) 681-1150
Cost: $4,000,000.00
Contractor: .... Peterson Construction



2. Firm Qualification and Experience

South Padre Island Municipal Building

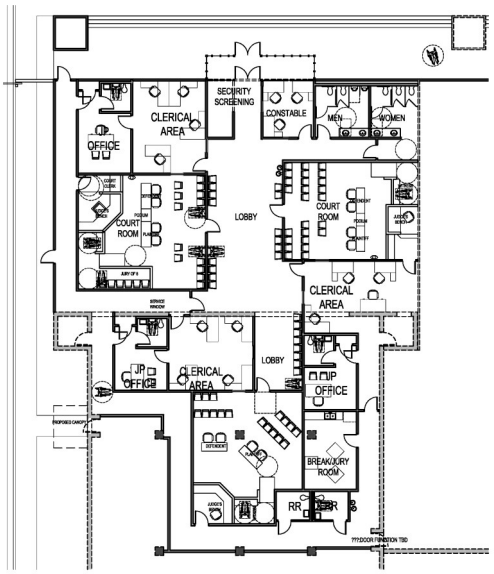
Town of South Padre Island, Texas

Designed to replace their 40 year old city hall, this new two story municipal complex houses a police station, jail, municipal court, alderman's chambers, city manager, public works, building inspections, code enforcement, finance, city records and other various offices. Designed to withstand the hurricane force winds, storm surge, and the corrosive coastal environment of this barrier island.

Completion:.....2008
Size:.....30,000 Sq. Ft.
Owner:.....Town of South Padre Island
Contact:.....Mr. Robert Pinkerton
.....(956) 761-6456
Cost:.....$ 7,150,000.00
Contractor:.....Terry Ray Construction

2. Firm Qualification and Experience

Texas Regional Bank
Harlingen, Texas



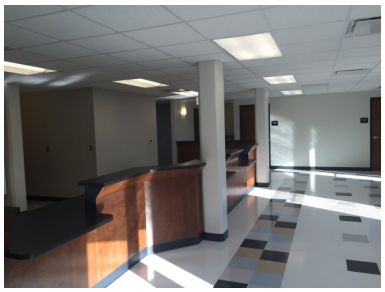
Project: Texas Regional Bank
Harlingen, Texas
Location: 6770 W Expressway, Harlingen, Texas
Owner: Texas Regional Bank
Contact person/title: Mr. Michael Scaief, Chairman
Phone number: 956-364-3617
Project description: New 38,467 Four (4) Story Building containing a banking center on 1st floor, bank support office and lease space 2nd floor, lease space 3rd floor, bank executive offices 4th floor.
Project Construction Cost: $10,000,000.00
Project Size: 38,467
Date Start and Completion: March 2017-June 2018
Professional Services: Architectural/Engineering
Project Manager: Mr. Mike Allex, AIA
Project Architect: Mr. Mike Allex, AIA

2. Firm Qualification and Experience

Cameron County Justice of Peace Courts
Brownsville, Texas

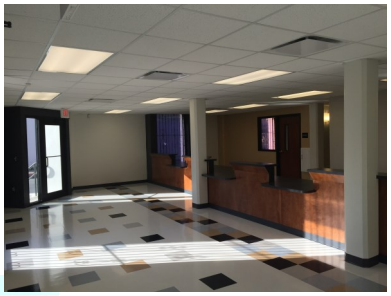
Project consists of a Re-Use of the previously designated Cameron County Elections Office, a space of approximately 3,467 SF, to be converted to accommodate three new Justice of the Peace Courtrooms with respective Judge's Offices.

Along with the existing area to be renovated, an additional area will be constructed to supplement the required area needed to accommodate all of the three courtrooms and respective offices. Project is expected to be designed and place for bids within a sixteen week schedule, and allowing for a twelve month window of construction.



Completion: 2015 | Size: 9,488 GSF | Cost: $1,500,000.00

Project Contact:
Danny Villarreal, Construction Manager
1100 E. Monroe Street | Brownsville, TX 78520
956.761.6456



2. Firm Qualification and Experience

Cameron County Veterans and Elections Office
Brownsville, Texas

Project required a Re-Use of two existing buildings that were built in the 1950 -1960's and originally housed Brownsville ISD administration and credit union offices, respectively. The Elections building was completely gutted of interior spaces, leaving the concrete structure and single-wythe brick wall. The brick wall received a weather barrier and new rigid-board insulation to meet today's building code requirements, and to assist in reducing energy consumption. This building also received an addition to house some offices, climate controlled storage, breakroom and restroom. Due to the building being in a historic district, special consideration was taken to select exterior finish materials to complement or match existing finishes. The Veterans Affairs building was also gutted of interior spaces, leaving the perimeter load-bearing walls and roof to work with. Both buildings received new interior metal stud and gypsum board partitions, along with new suspended ceilings, vct-flooring and millwork. Each building received new roofs that meet today's energy code requirements, as well as the coastal windstorm requirements.

Completion: 2015 | Size: 4,361 & 1,487 GSF | Cost: $800,000

Project Contact:
Danny Villarreal, Construction Manager
1100 E. Monroe Street | Brownsville, TX 78520
956.761.6456

2. Firm Qualification and Experience

ROFA Approach:

With 77 years of experience, ROFA Architects Inc. has worked with multiple entities such as municipalities, counties and state agencies. We are staffed with **experienced architects** in McAllen and Harlingen. Our **McAllen** office is staffed with accomplished employees that can quickly and efficiently answer The City's needs, as we have successfully done for **you** and other **Valley clients**.

Through that experience we have worked with the following municipalities: McAllen, Harlingen, South Padre Island, La Feria, Edinburg, Pharr and Weslaco. At the county level, we have worked for Cameron and Hidalgo. At the state level, we have worked for The Texas National Guard Armory, Texas Department of Public Safety and The Army Corps of Engineers.

Working with this long list of entities, our firm has developed a tried and true methodology for developing project scope and information gathering.

Understanding the Scope is crucial to the success of the project. This is done through a series of Design Charettes.

Approach to Complete the Scope

The Design Charette
For our Municipal Clients, the most beneficial technique we have incorporated employs a technique called The Design Charette.

Phase 1:	Review Owner Program Visit Site Conceptual floor/site plans Establish program services Draft program	Phase 3:	Design Charette Develop adjacency concepts Team review and approval Develop site patterns Management approvals
Phase 2:	Design Charette Establish project goals/criteria Develop alternative concepts Establish project Budgets/schedule Make adjustments Outline project program	Phase 4:	Design Charette Team workshop to select concept Verify program tracking

From our design charette and concept development, a program document is developed. It serves as the reference point for all future design, documentation and construction phases. It is crucial for it to be thorough and complete. Our programs start with a preliminary space program that approximates the general size and scope of the project by documenting every required space; its approximate size, either by state standards, owner requirements or by experience with previous projects.

2. Firm Qualification and Experience

Approach to Complete the Scope

The completed program documents include the following major headings:

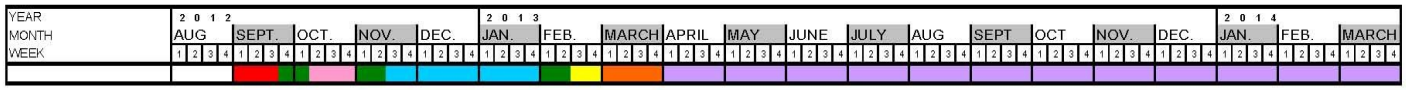
- Project Overview
- Site program, to include requirements for end users, staff and visitor parking, deliveries, etc.
- Building program
- Jurisdictional requirements, including state licensing issues, accreditation standards, local code and ordinances
- Other considerations: Goals and Objectives

Approach to Complete the Scope

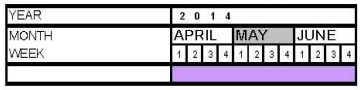
Subject to the special conditions of each individual project, there is a review period set up between each phase of work. These review sessions correspond to the finalizing of planning and programming, for the schematic design phase, the design development phase, and construction document submittals. In addition to the review process (including the program document), the items receiving special consideration include consistency and adherence to quality standards, consistent derailing and build ability, and coordination between disciplines.

Upon review of the initial concepts developed by The City, ROFA will meet with designated staff and leadership to evaluate and confirm the data presented. Utilizing this programming information, we will have a "design charette," a multi-day session where staff, leadership and design professionals provide input together resulting ultimately in a schematic design plan. We invite all interested parties to participate. Our presentations will include public hearings. We are bilingual in English and Spanish and will be prepared to converse in either language at all meetings.

2. Firm Qualification and Experience



The timeline below is a format we developed for a current client and has since been used for school district clients. It has been well received because (from a quick glance) it graphically describes the durations for the various phases of design and construction.



We have found that it is critical that Staff and Boards be informed and involved in this process. That is why you will find various "Owner Review" periods in this timeline.

Of course, if time is of the essence, then "Owner Review" and "Bid Evaluation" Phases can be accelerated.

Each constructive meeting serves as a forum dedicated to staying on top of the project.

Health Professions Educations Facility
Harlingen Consolidated Independent School District
PROPOSED PROJECT SCHEDULE
8/15/2012

Schematic Design	(3 Weeks)
District Review	(2 Weeks)
Design Development	(3 Weeks)
District Review	(2 Weeks)
Construction Drawings	(10 Weeks)
District Review	(2 Weeks)
Final Bd. Review/Approval	(2 Weeks)
Advertising and Bidding Phase	(4 Weeks)
Construction Phase	(60 Weeks)

Construction Completion July 1, 2014

2. Firm Qualification and Experience

Project Team and Phases

The project starts with understanding the district's needs and expectations. The project team will be extensive and include district administrative, athletic, custodial, facilities, and specialty personnel, engineers, landscape professionals and architects. Each team member will be engaged in respective phases as follow:

Space Utilization Study

Our facilities and space utilization studies involve the layout of a series of established project elements, which may include pedestrian and vehicular circulation, parking, entries and exits, service areas and other site amenities such as environmental features. Our plans are designed to fit budgets and the physical constraints of the building and land. Our solutions are developed from both practical and aesthetic points of view.

Programming

Programming involves a minimum of six basic steps: data collection, data analysis, data organization, and development of concepts, communication of data and concepts, and evaluation of the resulting program. ROFA Architects, Inc. will assist the district in the programming process and help them to develop project goals, values and aspirations.

Schematic Design

Based on an approved Program, the Schematic Design synthesizes the program into a defined, feasible design. The design will be shown in the form of Schematic Drawings and rendering. The Schematic Design will address all significant areas of design and will be reviewed with the client before proceeding with more detailed drawings. A preliminary cost estimate is also provided at this stage.

Design Development

Based on an approved Schematic Design, Design Development is the process of refining and fixing the design, and working out all the details, including the selection of materials and engineering systems. The aim is to finalize all design decisions before proceeding with Construction Documents, the more detailed and extensive documents that the contractor will need to complete the project. A more detailed cost estimate may also be provided at this phase. The Design Development package will be reviewed with the district before proceeding further with the project.

Construction Documents

Based on approved Design Development documents, construction drawings, written specifications are produced which describe in detail all of the construction work to be done. These are the documents upon which the construction contract will be based, and which the contractor will use to bid and build the project.

Bidding/Negotiations

Once a construction delivery method is selected, the project will proceed into the bidding phase. A contractor will be selected, and a construction contract is executed up between the contractor and the district. ROFA Architects, Inc. will assist throughout this process.

Construction Administration

On-site observation and conscientious administration throughout construction is necessary to assure that communication flows smoothly, that high standards are maintained, and that the district is satisfied with final completed project.

Our commitment is to offer you the best quality in service and excellence in design as we have for over 70 years.

2. Firm Qualification and Experience

COST CONTROL

In today's world, where construction costs are in a state of flux, we know how important good cost projections are. For more than 70 years we have maintained a project cost data that is invaluable to the cost estimating process. We pride ourselves in knowing that our estimates are a very close to the bid price.

As a firm located in the Rio Grande Valley, we receive bids on many of local school projects in a year. Having direct Involvement in these projects gives us an unparalleled perspective for construction cost trends. Also, having worked here in The Valley, we know what construction techniques are available to the area. This helps minimize cost.

The following is an example of one of our recent cost estimates. You will find that we try to be very thorough and this format (the listing of prices for rooms and design element) can quickly give you an understanding of where the money is. These estimates are updated 3 times, at the end of each phase of design.

- New La Sienna Elementary
- New Alberta Elementary
- New Rooth Elementary

Servando has worked across several building types on projects with existing conditions, tight budgets and often very aggressive schedules using Building Information Modeling (BIM) technologies. Servando oversees the process of design documents and coordinates ROFA's team of consultants and engineers during all phases. Mr. Miranda places major importance in being detail-oriented in his work and aims for a balanced approach that incorporates technical rigor, functionality, and aesthetics.

SERVANDO MIRANDA, AIA NCARB, LEED AP® ND, WELL™ AP, SITES® AP, CSI-EP, CDT®

Project Coordinator

2 years with ROFA Architects
1 year at AOS Architects

BACKGROUND

Master of Architecture, University of New Mexico, Albuquerque.
Graduate Certificate of Historic Preservation and Regionalism from UNM School of Architecture and Planning.
Bachelor of Fine Arts, University of Texas - Rio Grande Valley -UTRGV.
South Texas College, Civil Drafting and Architectural Technology Certificates, Information Specialist Certificate Award, McAllen.
Science Academy of South Texas

PROJECT EXPERIENCE

- Welding Technology Laboratory Facility for Donna Independent School District
- Campus Master Plan and space program for Vanguard Mozart Fine Art Academy and a full size Cafeteria and Dining Renovation for Vanguard Academy
- Mr. Miranda has had the privilege of working in rural, mid-size and small communities and has come to understand the value and pride we place in the built environment of a community. Servando played a key role in the preservation, restoration and expansion of St. Augustin Catholic Church at Isleta del Pueblo just south of Albuquerque to accommodate new classrooms spaces for the CCD program in the oldest serving Church in the United States, originally built in 1613.

3. Team Member Qualifications and Experience

Top Management and Key Personnel

For 77 years, ROFA Architects, Inc. has been dedicated to excellence in architectural services throughout the Rio Grande Valley.

At ROFA Architects, Inc., our team is our most important asset. Our offices are staffed with **10 full-time employees**, out of which **four are Registered Architects** in the State of Texas. Our team includes the principals of the company, project managers and architects, intern architects, drafting technicians and administrative staff with loyal service ranging up to 26 years of employment with our firm.

ROFA Architects, Inc., has the following assets available:

- Four (4) Registered Architects
- One (1) Architectural Interns
- Three (3) Drafting Technicians
- One (2) Administrative Assistants

Luis A. Figueroa, AIA, and our professional staff are available to immediately implement design and construction document procedures. Our active participation will be supported by our team of key members. Our team of key members will be attending meetings, directing schedules and providing project management leadership through the construction phase.

Mr. Luis Figueroa's forty-six years of architectural experience include, educational facilities, municipal, churches, shopping centers, banks, restaurants, industrial facilities, commercial remodeling. Mr. Figueroa lives in McAllen. In that capacity, Mr. Figueroa has served as Architect and Project Manager of projects for Edinburg CISD, Donna ISD, Brownsville ISD, Cameron County, and currently in Hidalgo County . Mr. Figueroa would be available on a moments notice and someone from the design team is on-site at least once a week.

3. Team Member Qualifications and Experience

Mr. Luis Figueroa, AIA as Project Manager will lead a team of key design and construction document personnel including active participation by Humberto Rodriguez, AIA.

As professional licensed architects and architect members of the American Institute of Architects, we provide the City of Edinburg the experience that a project of this size and scope will require.

Our individual and combined knowledge working with engineering consultant and construction professional with experience on complex single to multi-story renovation projects will facilitate the design and construction work including site traffic and parking lot design.

This construction management team will include the City of Edinburg personnel to oversee the successful completion of your projects.

We proposed the following A/E team for your consideration.

Luis A. Figueroa, AIA
Principal: Principal-in-charge: Project Manager /Designer

- 100% Participation
- Principal-in-charge
- Lead Design
- Mr. Figueroa will assist Mr. Humberto Rodriguez in Design, construction documents, construction administration, bidding, project meetings.
- Experience includes 46 years.

Humberto Rodriguez, AIA
Principal: Construction Documents Coordinator

- 60 % Participation
- Mr. Rodriguez will assist Mr. Figueroa in management of construction documents phase personnel.
- Experience includes 20 years with ROFA Architects, 11 years with other architectural firms and 3 years with a construction company.

Servando Miranda, AIA NCARB, Leed AP
Construction Coordinator

- 40% Participation
- Mr. Miranda will attend design development meetings, construction document meetings and assist Mr. Figueroa during the construction administration phase through final completion and the warranty period.
- Experience includes 2 years with ROFA Architects and 1 year with other firm.

RFQ #: 2024-8
REQUEST FOR QUALIFICATIONS FOR ARCHITECTURAL SERVICES ROTATION

I. TRANSMITTAL LETTER

Mr. Hinojosa,

It is with great enthusiasm that I submit our qualifications for consideration for architectural services rotation for the City of Edinburg. SABAL Landscape Design LLC, dba SABAL, is a landscape architecture and urban design firm based in Brownsville, Texas. We approach each project with ecological sensitivity and sustainable design methodologies to reconnect users to their unique Rio Grande Valley environment and community.

Of the services listed in the scope of the RFQ, SABAL will commit to the City of Edinburg to perform the following: site planning and landscape architecture, code analysis, sustainable design, construction contract administration, cost analysis and schedule planning, public art, and project review.

As owner of SABAL, I am authorized to bind the firm to contract and will be the point of contact with the City of Edinburg on all correspondence and communications pertaining to this RFQ.

I look forward to the opportunity to review our qualifications with you.

III. FIRM QUALIFICATIONS & EXPERIENCE

SABAL, founded in 2023, is led by Hunter Lohse, an award-winning landscape and urban designer. SABAL specializes in community-based, ecologically sound design of public and private landscapes. SABAL works with a variety of clients on commercial, residential, and public projects.

For the past three months, SABAL has been collaborating with the Brownsville Parks and Recreation Department, the Brownsville Beautification Committee and Brothers in Arms, a Brownsville Vietnam Veterans group, to master plan and design a new installation at Veterans Park.

We prioritize customer satisfaction through high-level design outcomes, efficient time management, and timely correspondence. Our Brownsville office will be providing all services to the City of Edinburg. We have a network of part-time designers for whom we can bring onto a project based on the qualifications of the designer and the demand of the project.

Firm Registration No. BR 4966

III. TEAM MEMBER QUALIFICATIONS & EXPERIENCE

Hunter Lohse, PLA, Assoc. ASLA, SITES AP, LEED AP ND

Prior to launching SABAL in 2023, Hunter's work under Tucson-based Norris Design included numerous sports and community park renovation projects including Jacobs Park Master Plan, Villa Serena Park Renovations, Juhan Park Renovations, Parkview Park Renovations, and Richey Park Renovations. He successfully collaborated with multi-disciplinary teams on an array of projects including park renovations, master planning, university campuses, hospitals, roadways, and government buildings.

He is a member of the Lower Rio Grande Valley Texas Master Naturalists, the Native Plant Project, and is professionally accredited by Leadership in Energy and Environmental Design (LEED) in Neighborhood Development and the Sustainable Sites Initiative (SITES).

COVER
LETTER

SAM GARCIA ARCHITECT
EST. 2013

July 2, 2024

CITY OF EDINBURG
Attn. Mr. Mardoqueo Hinojosa, City Engineer
415 W. University Drive
Edinburg, TX 78539

Re: ***Request for Qualifications for 2024-8 Architectural Services Rotation***

Dear Mr. Mardoqueo Hinojosa, City Manager:

Sam Garcia Architect, LLC (SGA) has been providing services in the Rio Grande Valley since the office opened in 2013, including several architectural projects for local school districts. We look forward to building a prosperous relationship with **THE CITY OF EDINBURG**.

SGA is pleased to present our and our team's qualifications and offer our Architecture/Engineering Services for the City of Edinburg, TX *for Architectural Services Rotation*. SGA is an award-winning architectural firm which provides professional design services from master planning, conceptual design, through construction documents, specifications, and construction administration along with coordination with engineering consultants. Company Founder, and Principal, Sam Garcia, RA, AIA is an architect with over 20 years of experience in the industry working on a wide variety of projects small and large, both public and private.

Our goal is to meet and exceed the expectations and standards that our clients set by maintaining a high level of dedicated service. SGA maintains direct involvement in all phases of every project which ensures a level of quality control and responsive decision-making that results in tailor-made solutions for every unique client. Strong relationships within the proposed team make for smooth coordination of work and project completion.

We are experienced in interpreting community needs and desires, conducting surveys, and gathering public input, completing needs analysis, developing level of service standards or guidelines, determining future needs and their costs, creating production drawings, and producing contract documents. We are confident that we offer the expertise, creativity, and sensitivity to budget what the project requires. SGA has no record of substandard work or engagement in unethical practices within the last 14 years. There are no potential conflicts of interest that would prohibit SGA or its employees from providing the requested services.

SGA is committed to providing immediate response, being proactive to your needs and serving as your partner and advocate. Sam R. Garcia is the Project Manager and main point of contact authorized to commit SGA on contractual agreement; he can be reached at (956) 631-8327/(956) 212-4930 cell phone or by email at SG@SamGarciaArchitect.com. Our firm address is 1200 Auburn Ave., Suite 280, McAllen, Texas 78504.

Sincerely,
SAM GARCIA ARCHITECT, LLC

FIRM PROFILE

SGA is an award-winning architectural practice based in McAllen, Texas. The practice develops strong ties to the communities we work with by engaging our clients and crafting tailored architectural solutions that meet their unique needs. We pride ourselves in our ability to adapt our clients' vision into well-crafted, workable, and attractive solutions. Our work at once reflects the unique geographic/historic context of the Rio Grande Valley while simultaneously drawing on a contemporary and forward-looking design aesthetic without borders.

COMPANY HISTORY

SGA was founded by Sam R. Garcia in 2013. The company has experienced sustained growth and evolution since its inception and has completed projects throughout the Rio Grande Valley, as well as the Coastal Bend area and Central Texas. Clients and projects include municipalities, counties, the State of Texas, along with private individuals, corporations, and developers, and now the federal government. The firm currently has a staff of six employees that serve our client base. We are headquartered at 1200 Auburn Avenue & North of 10th Street in McAllen, Texas.

BACKGROUND:

Mr. Garcia is responsible for all aspects of management, business development, client relations, design, and production for architecture/master planning projects in Texas. He manages a professional staff of 6-7 people and has overseen the design of numerous projects, with a cumulative estimated construction cost of over $40 million. The firm's client roster includes private individuals, municipalities, county governments, and state and federal work.

CLAIMS HISTORY UNDER PROFESSIONAL MALPRACTICE INSURANCE:

None

LAWSUIT HISTORY:

SGA has had no material lawsuits or regulatory issues for the past ten years.

DESIGN & DRAFTING SOFTWARE:

REVIT STRUCTURAL (BIM) V. 2023,
AUTOCAD V. 2023

EDUCATION: SAM R. GARCIA, JR., RA, AIA

ARCHITECT | PRINCIPAL IN CHARGE

Bachelor of Architecture, The University of Texas at Austin
School of Architecture (2004)
Registered Architect, State of Texas no. 2133 (2009)

ABILITY TO COMMENCE SERVICES:

Sam Garcia Architect, LLC can begin work immediately.

TECHNOLOGICAL CAPABILITIES:

At SGA we utilize the latest industry leading 3D modeling design tools (Autodesk Revit, Sketchup, AutoCAD). Real time coordination is achieved through cloud collaboration services (Autodesk BIM360) allowing us to cross examine consultants' design model and generate accurate drawings avoiding construction delays.

Realistic renderings are created using a combination of our 3D modeling tools and exported through ENSCAPE, Architectural Visualization. For digital presentations we use several Adobe Acrobat tools (InDesign, Photoshop).

Consultant/client coordination is achieved through virtual meetings such as Google Meets, Zoom, Microsoft Teams to name a few. Our staff is trained in hosting and presenting and/or coordinating design aspects over the Web.

AVAILABILITY / COMMITMENT:

SGA is fully committed to providing professional services. Sam R. Garcia, RA, AIA, Principal along with Project Managers, Jose L. Rios Jr, RA, AIA, Sergio Castillo, Associate Architect, and Project Architect, Hector A. Guevara, RA, AIA are fully committed from the beginning of the project until completion. Zuri Rivera, BA assists the project managers with Interior Design concepts.

SGA'S PHILOSOPHY

Sam Garcia Architect exists to produce outstanding work. We believe that through architecture, our communities become better places. We are more comfortable in the places we live, work, workshop, learn, and play. So, when are more attuned to our surroundings, we enjoy life more. We believe the future of the Rio Grande Valley is bright. In a big-picture sense, this is a very young region, and only now beginning to hit its stride.

The phenomenal demographic growth, which is another way of saying – the abundance of young families – is a great sign and should be a real cause for optimism. It gives us hope and it tells us that we are going to need to start creating the world that they will live in, now. This is what drives us, and it is why we work in architecture.

Helping clients reach their goals, showing them the added value of well thought out design, and uplifting people and leaving them pleasantly surprised through our designs – therefore SGA exists.

Having said that, we at SGA also believe that producing great projects with outstanding results has nothing to do with lavish budgets, avant-garde design, or noble intentions. Realistically, great work has everything to do with clarity, accountability, and technical coordination.

- **Clarity** – Starts at the very beginning of each project and doesn't allow for assumptions. Project size, scope, budget, timeline, and program need to be established up front. Changes on the ground need to be addressed immediately so adjustments can be implemented right away. Fees need to be fair and consistent. *
- **Accountability** – Starts with effective communication between the Client and Architect. It means that we'll do what we say we'll do; that we'll be where we say we'll be; that we'll deliver when we say we'll deliver; and that we'll figure it out when it hasn't been figured out yet.
- **Technical Coordination** – Starts with making sure that the nuts and bolts of a project are lining up. The project needs to be well thought out for it to come together smoothly. It means that the Architect is responsible for fostering accountability between Engineers, Building Officials, Contractors, and Sub Consultants.

FIRM'S CAPABILITY

Sam Garcia Architect, LLC (SGA) is well suited to provide Architectural Services for the State of Texas. We possess the experience, talent, and know-how necessary to work with the City, County or School District in whichever capacity we may be of service. SGA has three Board Certified Architects on hand and an Architectural CAD Drafter. The TEAM can begin work immediately upon receipt of a notice to proceed from the City/County or School District.

Our services include:

- Architectural Design for buildings includes renovations, upgrades, expansions, alternations, and new construction.
- Code Analysis
- Construction Contract Management and Construction Administration Services
- Oversight and Coordination of Field Testing and Construction Site Observation
- Cost Estimating
- Planning/Research
- Project programming and space planning
- Site Analysis and Consultation
- Needs Assessment
- Conceptual Design
- Preparation of Construction Documents
- Preparation of Bid Packets
- Engineer Coordination
- ADA Compliance
- Code Analysis
- Sustainable Design
- Energy Specialist*
- Environmental Review*
- Fire Protection Engineer*
- Landscape Design*
- Mechanical, Electrical, & Plumbing Engineering*
- Structural Engineering*
- Site planning*
- Surveying*
- Soil/Geo-tech/Environmental Engineers*
- Civil Engineering*

*These services will be provided through SGA's subconsultants.

Advantages of Working with SGA:

- Individual attention from the entire project team, including the principal architect.
- A unique vision that is contemporary without going to excess
- We listen to our Clients and do everything possible to get projects to exceed their expectations.
- Familiarity with the south Texas construction market and good relations within it to contractors, municipalities, and other related parties.
- Flexibility: our company is not "Set in its Ways", so we are able to adapt to changing circumstances.

Services

SGA is an award-winning architectural practice based in McAllen, Texas. The practice develops strong ties to the communities we work with by engaging our Clients and crafting tailored architectural solutions that meet their unique needs. We pride ourselves in our ability to adopt our Clients' vision into a well-crafted, workable, and attractive solutions. Our work at once reflects the unique geographic/historic context of the Rio Grande Valley while simultaneously drawing on a contemporary and forward-looking design aesthetic without borders.

SGA has the Capability to Provide Professional

Approach for Handling Multiple Projects

SGA is managed by our Principal, Sam Garcia. He is involved with all projects and makes sure that there is adequate staff assigned to each project. All information from our sub-consultants goes through him before being disseminated to the proper team members. This eliminates confusion and streamlines the management process.

SGA has the Capability to Complete Projects Within Budget

SGA understands the importance of keeping a project on budget and not having cost escalations or overruns. Our team structure leads to not only performing projects within established budgets but also developing plans and construction documents that can be built within the construction cost estimate. Examples include:

Project	Estimated Construction Cost	Final Construction Cost
Texas DPS License Mega Center	$3,400,000.00	$3,400,000.00
Cavazos Sports Institute	$1,500,000.00	$1,500,000.00
Tres Lagos Community Center	$3,500,000.00	$3,500,000.00

Approach on Handling Unusual Challenges

Please reference page 40, Familiarity with the Area - Addressing Local Issues & Concerns, for this matter.

Litigation Summary

SGA has no litigations to report.

Terminated from a Project

SGA has never been terminated from any project.

SECTION 3

FIRM QUALIFICATION & EXPERIENCE

Discuss the firm's experience and history in performing engineering and project management services in a timely manner, particularly for other governmental agencies in the past five (5) years. Discuss the firm's uniqueness to best perform these services for the City. Identify the office location that will be providing the services and the approach to handling part-time staffing needs for smaller assignments.

Sam Garcia Architect, LLC (SGA) has a robust history of providing architectural services and project management to various governmental agencies. Over the past five years, we have successfully completed numerous projects, ensuring timely and efficient delivery.

PROJECT EXAMPLES:

1. Experience Working with Government Agencies:
   Anzalduas International Land Port of Entry-Commercial Inspection Improvements (MISSION, TX):
   Found on page 8 of this RFQ.

   Donna-Rio Bravo International Land Port of Entry-Commercial Inspection Improvements (DONNA, TX):
   Found on page 8 of this RFQ.

2. Experience on Projects of Similar Scope and Complex:
   Found on pages 09 – 16 of this RFQ.

TIMELINESS AND EFFICIENCY:

Our firm prioritizes project timelines and has developed a streamlined process to ensure milestones are met without compromising quality. We employ advanced project management tools and techniques to monitor progress and address any potential delays proactively.

FIRM'S UNIQUENESS AND CAPABILITY

1. Specialization and Expertise:
   Sam Garcia Architect, LLC (SGA) brings unique strengths in architectural design tailored to governmental needs. Our team includes experts with specialized knowledge in compliance, public safety, and sustainability, which are critical for government projects.

2. Innovative Solutions:
   We leverage cutting-edge technology and innovative design practices to deliver functional, aesthetically pleasing, and sustainable architectural solutions. Our unique approach ensures that each project we undertake is distinct and fully aligns with the client's vision and regulatory requirements.

3. Collaborative Approach:
   Our firm believes in a collaborative approach, working closely with city officials and stakeholders to ensure transparency and alignment throughout the project life-cycle. This collaboration helps in addressing specific needs and incorporating community feedback effectively.

OFFICE LOCATION AND STAFFING APPROACH

Office Location:
Our primary office providing services for this project is located at 1200 Auburn Ave., Suite 280, McAllen, TX. This strategic location allows us to efficiently manage and oversee project activities, ensuring timely on-site presence and support.

Handling Part-Time Staffing Needs:
For smaller assignments requiring part-time staffing, we have a flexible staffing model that allows us to scale resources up or down based on project demands. Our team of experienced architects and project managers is adept at handling multiple assignments, ensuring consistent quality and attention to detail.
We utilize a blend of full-time staff and a network of reliable subcontractors to meet fluctuating workload demands without compromising service quality.

SGA is well-equipped to deliver superior architectural services to the City, backed by our extensive experience, innovative approach, and commitment to excellence. We look forward to the opportunity to bring our unique capabilities to your projects and contribute to the City's architectural landscape.

EXPERIENCE WORKING WITH GOVERNMENT AGENCIES

SGA has worked with numerous governmental agencies over the years while designing projects. We are knowledgeable of required codes and are accustomed to working with municipalities and counties on behalf of our clients. We have also had to liaise with federal and state agencies on behalf of our clients and have become quite knowledgeable of the process and what is expected of a design team.

a.	***(1) TITLE AND LOCATION (City and State)*** **ANZALDUAS INTERNATIONAL LAND PORT OF ENTRY-COMMERCIALINSPECTION IMPROVEMENTS (MISSION, TEXAS)**	PROFESSIONAL SERVICES 2020	CONSTRUCTION *(If applicable)* ONGOING

The facility has room for additional future training areas, a helicopter pad with approach and take off clearances.

Overall, the appearance of the exterior facade will retain its original look as the project will focus on finishing out the interior usable space.

CAVAZOS SPORTS INSTITUTE

LOCATION: McAllen, Texas
DATE COMPLETED: October 2015

The premier strength and conditioning coach in south Texas worked with SGA to create a one-of-a-kind performance facility that consistently produces elite athletes. This project was the brainchild of owner Jaime Cavazos, who developed a well-earned reputation as a performance coach for middle-school and high-school students in the Rio Grande Valley. This project incorporates an indoor basketball/volleyball gym, indoor running track, and weight training area. The building was designed to project an athletic, youthful, and dynamic image. The architectural expression incorporates the ideas of movement and a powerful structural stance. Special attention was paid to lighting, flooring, and wall finishes. This project was co-created with a prominent local design firm, NOMA Studio and even garnered an AIA Citation Award.

IDEA - CAMP RIO

LOCATION: Brownsville, Texas
DATE COMPLETED: July 2019

From the 1960s through the 1980s, the 85-acre tract of land known as Camp Lula which served as a Campground for the Girl Scouts of America. Countless young ladies spent time at the densely wooded property, just outside of Brownsville. Over the past 25 years, the property was under the stewardship of a prominent Biologist, Dr. Pat Burchfield, Director of the Gladys Porter Zoo. When Dr. Burchfield wanted to sell the property, he founded the perfect partner in IDEA Public Schools. IDEA Schools has revived the property as an active camp, known now as Camp Rio.

Camp Rio serves as a day camp for thousands of IDEA Public School students. Students are exposed to the natural science in a real-world setting. SGA was hired to work with IDEA Schools and the Valley Land Fund (a conservation non-profit) to develop a master plan for the future growth of the Camp into a full-fledged overnight summer camp. SGA let the design process by balancing the needs of the camp with the sensitive conservation aspects related to the land. Once the master planning was complete, SGA worked on implementing the first phase of the design work. We designed a brand-new road and utility network, along with new facilities, including a Main Pavilion, multi-purpose classroom building, and recreation swimming pool. Eventually, SGA will design a well-appointed retreat center, executive cabins, and on-site staff housing. This project has involved numerous entities including IDEA Public Schools, the City of Brownsville, Cameron County, the American

Camping Association, Brownsville Historical Commission, Valley Land Fund, Texas Parks, and Wildlife Department and Private Donors.

PHARR FIRE STATION #3

LOCATION: Pharr, Texas
DATE COMPLETED: April 2017

For many years, Firemen working at Station Number 3 in the Las Milpas section of Pharr were forced to endure cramped quarters and insufficient air conditioning. Meanwhile, the Pharr Police Department substation, housed in the same building, had excessive unused space. SGA was tasked with re-working the overall spatial distribution of the facility while ensuring that both critical Fire and Police services remained uninterrupted. SGA worked hand in hand with Pharr Fire Department Fire Chief and senior Police personnel to create a design that worked for all concerned parties. The project renovation included a new common room, kitchen, bunk room, restrooms, showers, workout room, and offices for the Fire Department. The Police substation was re-programmed to serve as a smaller facility -- useful to patrol officers and the immediate local neighborhood.

COLLEGE OF HEALTH CARE PROFESSIONS

LOCATION: McAllen, Texas
DATE COMPLETED: April 2015

A physician-owned allied health career training college, CHCP contracted SGA to design their first campus in McAllen. As an accredited institution of higher learning, CHCP had rigorous demands for classroom, laboratory, and administrative space. SGA worked with the school's top administration and teaching staff to ensure that the school would have functionality, durability, while remaining flexible and adaptable for future growth. A medical training facility of this caliber required several spaces to be designed to closely mimic real-world clinic and hospital settings. We designated several training labs that were based on current industry standards for ultrasound, radiology, and physical therapy applications.

In 2018, SGA was involved in the expansion for the facility by providing Construction Administration services for a 4,000 square foot expansion.

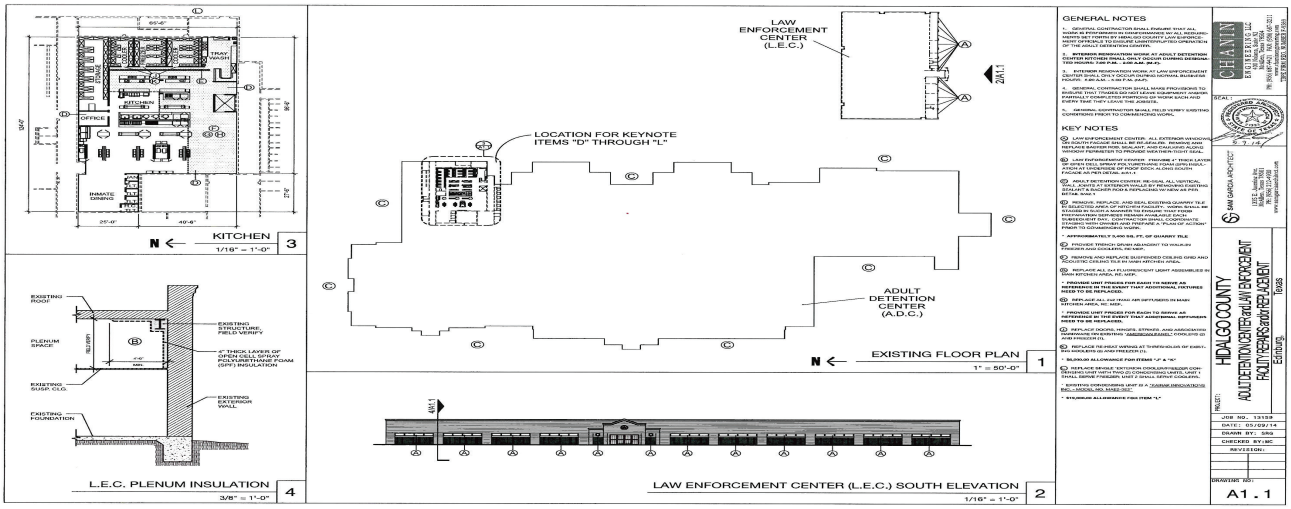
TEXAS DPS DRIVERS LICENSE MEGA CENTER

PROJECT INFORMATION

PROJECT DESIGNER/PLANNER: Sam Garcia Architect, LLC
MEP ENGINEER: Trinity MEP Engineering
PROJECT MANAGER: Sam R. Garcia, AIA
FINAL CONSTRUCTION PRICE: $3.4 M

LOCATION: Edinburg, Texas
DATE COMPLETED: March 2017



As a result of Hidalgo County's continued significant growth, the Texas Department of Public Safety decided to build a new facility north of Edinburg. The facility serves three purposes:
1. Facility for driver license issuance/renewal
2. Commercial driver license testing facility; and
3. Base of operations for DPS Troopers.

This project was the result of a public/private partnership between the State of Texas and a private real estate developer.

SGA was part of the private developer's team, which included the real estate acquisition, construction, and engineering subconsultants. This method of procurement and construction allowed the State of Texas to have the facility they wanted in a much less expensive and time-consuming way than the traditional design-bid-build procurement method. SGA was happy to play a role in an alternate delivery method that benefits both the public and private sectors.

HIDALGO COUNTY ADULT DETENTION CENTER AND LAW ENFORCEMENT BUILDING

LOCATION: Edinburg, Texas
DATE COMPLETED: December 2015

The original 1990s construction of the Hidalgo County Jail and adjacent Sheriff's offices had numerous deficiencies. Many of these deficiencies were negatively affecting the health, safety, and welfare of employees and inmates. Hidalgo County hired a group of consultants, including Sam Garcia Architect, to ameliorate the deteriorating conditions.

The primary area of concentration was a total re-roofing of over 200,000 square feet of roof area. This work coincided with replacement of existing HVAC equipment. This task was made more complicated by virtue of being done in an actively running jail detention facility. The work required extreme attention to detail to ensure that not one potential security/safety breach became a reality.

The next major component was an upgrade to the kitchen and food storage facility in the Adult Detention Center. This included replacement of existing walk-in cooler and freezers, total resurfacing of the floors, new plumbing fixtures, and upgrades to the electrical system.

KHIT MULTIDISCIPLINARY GROUP

September 30, 2023

Dr. Luis I. Khit, DC, MBA
Chief Executive Officer
Khit Multidisciplinary Group
401 N Bryan Road
Mission, TX 78572

Dear Sir/Madam,

I am writing to offer my highest commendation for the exemplary work of Sam Garcia Architect, LLC, based on their involvement in four significant projects undertaken for our practice within the past two years.

Throughout our collaborations, Sam Garcia Architect, LLC, has consistently showcased an exceptional level of professionalism and expertise and demonstrated a profound understanding of our specific needs, and delivered exceptional results within our designated budgets. Their ability to manage costs without compromising the quality of their work is truly commendable.

The projects they have undertaken for us, including renovations, the construction of a new clinic, a corporate headquarters, and an Ambulatory Surgery Center, have all been executed with utmost precision and attention to detail. Their team's expertise and professionalism have been evident in every stage of the process, from conceptualization to execution.

What sets Sam Garcia Architect, LLC, apart is their remarkable capacity to translate our requirements into stunning architectural designs that to our brand. Their ability to capture our vision and enhance it with their creative expertise has resulted in facilities that not only meet but exceed our expectations in terms of functionality and aesthetics.

Without reservation, I highly recommend Sam Garcia Architect, LLC, for any architectural project. Their commitment to excellence, professionalism, and ability to manage budgets while delivering superior quality work make them an invaluable asset to any project.

Should you require further details regarding our experiences collaborating with Sam Garcia Architect, LLC, please do not hesitate to contact me at luiskhit@khitmdgroup.com.

Sincerely,

Dr. Luis Khit, DC, MBA
CEO of Khit Multidisciplinary Group

SECTION 6

UNDERSTANDING THE PROJECT

SGA is very much interested in providing Professional Architectural Services. We are equipped to assemble a solid team of professionals that will combine their expertise to deliver feasible, cost-effective and quality-driven professional services for public infrastructure and other related projects.

PLANNING AHEAD

SGA is aware that there are significant differences between planning and design services for traditional design and development projects. The firm's in-depth understanding of these unique processes will allow it to add value to the project during preliminary planning stages. During the early stages of the project, it is important that the level of planning be commensurate with the project complexity and the risks involved. Early planning and identification of alternative courses of action result in greater opportunity to add value with a minimal investment of time or money.

Through these initial strategies, SGA will develop a project "plan of action" that will be designed to address management and execution challenges early-on and thereby, prevent delays and provide the most effective use of staff and resources. SGA will provide constant reviews of all aspects of the project task orders from the design phase through final stage – keeping continuous watch on providing the best value and delivery of services to the Client.

INTEGRATION OF DESIGN ACTIVITIES

SGA's complete design process includes identifying a need or a challenge, researching existing technologies and studies that could be adapted into design, recognizing constraints, identifying, and developing courses of action, selecting optimum courses of action, designing alternative solutions. Such evaluations determine its proper fit within the requirements and will manage the overall process, communicate the design, and prepare specification/manufacturing limits. By employing sustainable design into its projects, SGA can carefully compare the results of each design analysis to the project's requirements and select the one that renders the most sustainable and cost-efficient solution.

SCHEDULING

The priority objective for the success of each project is for the management team to provide clear leadership and direction to the team personnel to insure achievement of the project's schedule milestones.

Execution of each project is schedule driven and cost effective, and the SGA team is committed to executing each project with this objective as key priority. The schedule includes critical path logic, key project milestones, and task and logic identification enough to monitor project progress, and to identify potential delays and discrepancies for work around plan development and initiation. The schedule is further detailed with information obtained from design/constructibility reviews and plan development. All members of the project team identified will have cross-discipline abilities. This will allow personnel to perform dual roles if the need arises – such as during sickness, personal leave, and/or during periods of increased workloads. SGA's management system will allow for adequate flexibility to compensate for any unanticipated variable workloads within the firm – thereby providing a balanced staffing plan that will never jeopardize the responsiveness and quality of services provided to the Client.

FAMILIARITY WITH THE AREA – ADDRESSING LOCAL ISSUES AND CONCERNS

SGA understands the unique needs of the project's area and prides itself in devoting its resources and talents to assisting public and private entities improve and develop their various infrastructure systems.

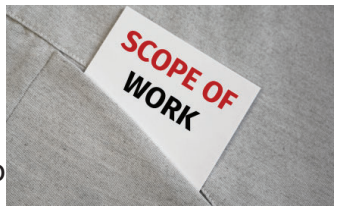
We have a complete understanding of the local geographical area and can identify with its people, appreciate its resources, and meet its challenges. The ability of a professional design-services firm to comprehend the demographic and geographic distinction of the area provides added value to its clients and to its professional endeavors. As such, SGA will be able to adequately access the area's existing resources, identify any problems in a timely manner, and recommend opportune solutions. As projects and deliverables are identified and executed, staff will be available at the SGA's McAllen office to provide adequate accessibility, communication, and availability of services directly impacting the bottom line and thus providing safe and efficient services.

SGA will lead the multidisciplinary design team which incorporates Structural Engineer Services (Green, Rubiano & Associates), Civil Engineer Services (DBR), Landscape Architectural Services (SITE-WORK), and MEP Engineering Services (Trinity MEP). The design team will be able to balance the requirements of the client, end users and a multitude of authorities having jurisdiction over the project(s).

DESCRIPTION OF WORK

SGA will provide all architectural design work from the master planning phase though construction administration. The firm will oversee the pre-permitting / entitlement process and managed the output of engineering sub-consultants. SGA will work with the owner's representative to administer the contract for construction. SGA will provide plans, specifications, addenda, construction administration, and closeout services.

Services to be provided for this project include Architectural Design, Bidding & Negotiation, Construction Documents, Construction Administration, Master Planning, Schematic Design, Design Development, Stakeholder Coordination.



METHODS PROPOSED TO ACCOMPLISH THE WORK

Exceptional design creates a lasting visual impression, and more importantly, fulfills the needs of the client and users. In addition to making an aesthetic statement, the best design is functional, sustainable, blends well with its environment, and creates an enjoyable space. SGA approaches design with a creative, problem-solving mentality. We know that one size does not fit all—your project must be custom-tailored. SGA believes that to achieve aesthetically pleasing and intuitively functional spaces, we must first understand you, our client. Planning, programming, and design are driven by your organization's internal operations as we gain an understanding of the workflow, relationships, technology, and culture. Success can only be achieved through communication and teamwork.

SCOPE OF SERVICES

We enjoy the process of collaborating with our clients, understanding the issues to be resolved by each project and fulfilling those project needs. Good architecture demands an understanding of the function and purpose that a project must serve and what requirements it has to satisfy. Because each project is unique, no two efforts will ever be exactly the same. Our staff has capabilities and experience in providing full architectural services for municipal, county, state, and federal clients including:

- Building Design including renovations, upgrades, expansions, alternations, new construction
- Project Programming and Space Planning
- Preparation of Construction Documents
- Preparation of Bid Packets
- Construction Contract Management and Construction Administration Services
- Needs Assessments
- ADA Compliance
- Code Analysis
- Sustainable Design
- Oversight and Coordination of Field Testing and Construction Site Observation
- Cost Estimating

PROJECT APPROACH

SGA has established project delivery processes and tools to support our team members ensuring quick mobilization and the ability to manage multiple team members as well as multiple projects. We routinely work on projects as part of a larger team with our own sub-consultants as well as with consultants that are retained by our clients, and with construction managers and general contractors and their subcontractors. Our project approach is focused on working as a team member for the successful execution of the Client. The project is what is important, not the individual team members. The focus will always be on making decisions that are in the best interest of you and your projects and not what is in the best interest of individual team members. During every phase and every task of this project, we will work as a team member for the good of the project and do everything within our control to be a good team member.

PROJECT KICK-OFF

Upon receipt of a request for services from the Client, SGA recommends a Kick-off meeting to review and discuss the project requirements, review available information, and clearly identify the goals and objectives for the projects and to understand

all stakeholders' expectations. Listening to your needs and the open exchange of ideas results in the most cost-effective and innovative concepts and ultimately the best solutions for projects. By integrating your project team into our design process, we can leverage their experience with that of our design team to capitalize on our individual skill sets to collaboratively develop tailored solutions for your research protocols. The experience of our team helps to unify potentially conflicting or differing opinions.

This initial meeting will help to refine the scope of work and, if necessary, will initiate a list of additional information that needs to be developed and or that needs to be gathered before we start the design process. We understand that some projects will be well defined and fairly straightforward, and others will require additional programming and development of more refined conceptual designs.

PROGRAMING AND CONCEPTUAL DESIGN

If necessary, we can work with your team and any other stakeholders identified by the Client to lead a programming effort for the development of technical requirements for a project including space requirements, square footage requirements, relationships between groups/ departments, overall project use requirements, and other similar type information that define the goals and objective of the project. The investment during programming provides us with a foundation to ask the thought-provoking questions to identify the project's stated and latent needs. This knowledge base of your specific needs allows our project team to draw on their individual and collective expertise, to provide tailored design solutions to your most challenging technical challenges.

By vesting our team into your project, we become an extension of the Client's project team. This investment in time to comprehensibly understand your program is critical to our ability to provide design solutions that not only meet your current needs but also are flexible enough to accommodate future requirements. Effective design solutions effectively integrate the engineering requirements of a project instead of these requirements being forced upon the architectural design. Depending on the project we would work closely with your maintenance and facilities groups to develop specifications for systems and finishes that are durable, easy to clean and to maintain. During the design of the project, attention will be given to the Client's standard specifications, budget, schedule, existing conditions, and design constraints in addition to the program elements.

IDENTIFY INFORMATION TO BE GATHERED OR OBTAINED

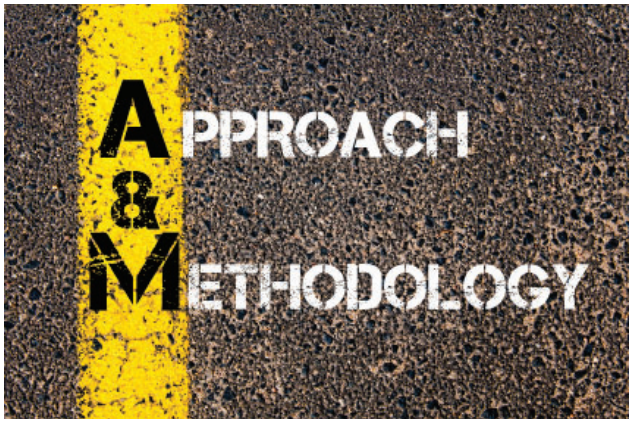
The information necessary to design a project varies depending on the complexity of the project, type of project, and whether it is new construction versus alternation or expansions. Depending on the scope of services being provided by SGA the information to gather and or obtained could include all or selected items from the list below and other similar type information:

- Soils Reports Land Surveys
- Site Plans
- Utility Plans
- Building Program Requirements:
- End-User Requirements and or Interviews
- Project Budget and Schedule requirements
- Project Goals and Objectives
- List of Client's expectations
- List of other consultants involved
- Design Documents from other consultants
- Responsibilities Matrix
- Building Code Requirements

- Design Standards and or Requirements from other entities involved
- Responsibilities Matrix
- Building Code Requirements
- Design Standards and Requirements from other entities involved
- Client's Standards and or Specifications
- Bid Packet Requirements
- Building Materials requirements
- Interior Finish requirements
- Furniture / workstation layouts
- Permitting Requirements and schedule

DESIGN DEVELOPMENT AND CONSTRUCTION DOCUMENTS

After approval of the conceptual design, our Principal and Project Manager will continue to lead the team through the design development phase with participation from other SGA team members and any other consultants working on the project. At the onset of this phase, we will conduct a formal building code analysis, and identify any other federal, state, or local regulations and policies that impact the design of the project. We know from experience that many times the regulations differ from entity to entity, any contradictions will be identified and addressed with the Client. During this phase, we will meet with the Client and their stakeholders to review progress and make any course correction that may be necessary. Depending on the size, schedule, and or complexity of the project, meetings can range from a single review to multiple reviews.



Upon approval of the Design Development, SGA will lead the team in the production of construction documents and bid packets. We will meet with the Client at the onset of this phase to identify the bid packet requirements. As we proceed into this detailed design process, we will have scheduled review meeting with the district and stakeholders and will continue to have coordination meeting with any other consultants that may be working on the project.

As we finalize the detailed design, we will review the project with the local building officials, fire marshal, local planning department if necessary, federal agencies, and other entities involved in the project.

PROJECT COST

Cost management is an integral part of the design and construction process. We recognize the significance of your investment and will strive to bring together the most qualified architectural team to ensure that you receive the very best services. During each project meeting, issues that could potentially impact the budget will be identified. With the Client and key team members on hand, we look for strategies to offer continued cost alignment to the budget. As the project progresses, we often also rely on an independent cost estimator or through a construction management firm to constantly define and maintain the project budget.

Quality Assurance makes SGA different when comparing to other firms. By implementing our Quality Assurance process, SGA can deliver and complete projects on a timely manner and achieve cost-effectiveness.

Due to the growth of the company and expansion plans, Sam Garcia Architect, LLC has been in the ongoing process of developing an ISO 9000 based quality assurance system. The timely completion of the QAS and its ongoing improvement are a high priority to the company. There are several ways in which SGA currently monitors quality and pursues a culture of continuous improvement with our projects and company. Including:

More Than Meeting Expectations:

- Developing a strong & documented understanding of the clients' wants, needs, and expectations from the beginning.
- Establish key lines of communication.
- Regular client updates
- Appropriate client-specific project milestones & time frames are developed with the client.

Benchmarking Project Milestones (25%, 50%, 75%, 95%, 100%):

- At each milestone, projects must meet certain predetermined benchmarks (both general standard & client-specific). Progress is documented. Projects do not move beyond a stage until all benchmarks are met.
- Industry-standard redlining practices.
- Each project drawing has an individual checklist.
- Standardized digital filing for best communication outcomes.
- BIM allows for accurate information to flow both ways.

Easy and regular oversight: With 6 team members at SGA, the principal has the ability to be actively involved in most projects for review, guidance, raising of concerns & ideas and more.

- One-On-One Meetings: Mr. Garcia meets with each of the team members daily.
- On-Going Quality & Plan Review: Full quality reviews at least weekly on project progress increasing dependent on project size and phase.
- Peer Review: This environment allows for accurate internal peer-review and cross consultant review.
- Location: The SGA office is located in McAllen metro area. The office is close to major freeway entrances and team members do regular site checks as needed.
- Availability: Mr. Garcia makes it a priority to ensure he is available whenever needed.

Relationship & Trust Building: Strong relationships with many of our clients, our consultants and within the SGA team. This allows us to keep regular, honest, and quality communication in a highly collaborative environment. Mr. Garcia believes trust & relationship building is one of the most critical parts of being successful in our pursuit of excellence.

Project Specific Examples

Project 1: Tres Lagos

1. Expectations: We established clear lines of communication. Met with client weekly at the same set time. By establishing a rhythm for progress feedback & adjustment, the project unfolded in an organized manner.
2. Benchmarking: By establishing milestone deadlines and by working toward a "grand opening" date, the project had an ever-present finish line. The project team worked backward from the anticipated opening date to establish key milestones.
3. Oversight: The project team attended all meetings to remain fully informed of project parameters. Mr. Garcia kept close attention to progress and provided ongoing feedback as necessary. Standard redlining practices employed.

Project 2: IDEA Camp Rio

1. Expectations: Worked with the client in pre-design, master planning phases of the project. By getting involved from an early stage we were able to analyze different approaches and options.
2. Benchmarking: Project team developed detailed questionnaires for the client about the project. By going deep into all the preferences, must-haves, deal-breakers, the project team gained a deep understanding of the clients' wishes.
3. Oversight: Design team and client met on a biweekly basis throughout the process. Detailed meeting minutes were kept, and these were cross-checked to ensure that steady progress was being made. Standard redlining practices were employed.

Project 3: Cavazos Sports Institute

1. Expectations: Developed a strong rapport with the client by understanding and believing in his mission and vision. I became an integral part of the clients' team because I could "see" where they really wanted to go.
2. Benchmarking: Spent additional time and effort to craft a highly detailed 3-dimensional rendering package for the project. Allow the client to have a crystal-clear vision for the project prior to beginning construction documents.
3. Oversight: Very-hands on approach with all members of the project team. Maintained very close ties to general contractor as well, meeting at regularly scheduled, ongoing basis during construction.

2024

ARCHITECTURAL SERVICES

CITY OF EDINBURG - CITY COUNCIL
Meeting Date: August 20, 2024
AWARDING OF BIDS
Agenda Item No: 10.G.
2024-2026 Professional Engineering Services Rotation

1. **Agenda Item:**
Consider Awarding RFQ 2024-009 Professional Engineering Services to Qualified Firm(s) and Authorize the City Manager or Designated Appointee to Enter Into a Professional Services Contract with Such Firm(s) as Projects Arise. [Mardoqueo Hinojosa, P.E., CFM, City Engineer]

2. **Description:**
On occasion, the City of Edinburg requires Engineering Services on City projects which do require a specific engineering specialty. The qualified firm(s) selected should be experienced in the field of Engineering, having experience in the design of road and pavement signage, traffic signals, hydrology and hydraulics, utilities infrastructure, water and wastewater infrastructure, as well as other related civil and structural improvements and design. It is expected that the qualified firm(s) selected will have a sufficient level of innovation and appraisal expertise to carry out the projects without constraints on producing documents in a timely manner. The firm must be prepared to assure the City of Edinburg that key personnel indicated in their qualification statement will maintain their role in each project and that their present workload is such that each project will be completed on or before the due date.

The rotation is for potential projects between October 2024 through September 2026. Projects to be funded in the upcoming fiscal years, as prioritized by the City Council.

Request for Qualifications were received on Tuesday, July 16, 2024, at 3:00 p.m. for Professional Engineering Services. A total of thirty-six (36) Request for Qualifications were received and reviewed by staff. All the submittals received met the criteria set out in the Request for Qualifications. The following qualified firms listed in alphabetical order have submitted Statements of Qualifications in response to this RFQ:

1. B2Z Engineering (Civil and Traffic)*
2. Chanin Engineering (Structural)
3. Civil Systems Engineering (Civil)
4. Cruz-Hogan Consultants (Civil)
5. DBR Engineering (MEP)
6. DeShazo Group Inc (Traffic)
7. Garver (Civil, Structural and MEP)
8. GDJ Eng (Civil and Traffic)*
9. Guzman & Munoz Engineering (Civil)
10. Halff Associates (Civil, Structural, Traffic and MEP)*
11. HC Engineering (Civil)
12. Javier Hinojosa Engineering (Civil)
13. KCI Technologies (Civil, Traffic and MEP)*
14. L&G Consulting Engineers (Civil)
15. LeFevre Engineering (Civil)
16. M2 Engineering (Civil)

17. Melden and Hunt (Civil)*
18. Mendoza Engineering (Structural)
19. Millennium Engineers Group (Geotechnical and Environmental)*
20. NorrisLeal (Civil)
21. Perez Consulting Engineers (Civil)
22. Quintanilla Headley & Associates (Civil)*
23. R Gutierrez Engineering (Civil)
24. Rio Delta Engineering (Civil)*
25. RO Engineering (MEP)*
26. S2 Engineering (Civil)
27. SAMES (Civil)*
28. SIGMA HN Engineers (MEP)
29. Solorio (Structural)
30. South Texas Infrastructure Group (Civil)*
31. Supreme Engineering (Civil)*
32. SWG Engineering (Civil)
33. TEDSI Infrastructure Group (Civil)*
34. Texas Infrastructure Development Group (Civil)
35. TRIMAD Consultants (Civil)
36. Trinity MEP Engineering (MEP)

*Denotes on current two year (2022-2024) rotation

Limiting the selection of firms between 5 and 10 for Civil Engineers and 1-3 on MEP will insure each firm will obtain a project as it arises. The current 2022-2024 rotation has 14 firms and all have been assigned with a project. Historically, City Council has selected 12-13 combined (disciplines) firms on this rotation.

3. Staff's Recommendation:

Staff recommends for the selection of (5-10) Civil Engineering Firms, (3-5) Mechanical, Electrical, and Plumbing Engineering Firms, and (1-2) Structural Engineering Firms to be selected and added to the City's rotation list.

1. Introduction

1.1. Summary

The City of Edinburg's Engineering Department is currently seeking to retain a rotation list of qualified professional Engineering firms to provide engineering services. The term of the contract will be two (2) years from 10/01/2024 – 09/30/2026. The work will be assigned on an as-needed basis for a variety of capital improvement projects and city programs and projects. The work may be discrete, short term assignments or may be part of larger capital or planning efforts.

1.2. Contact Information

Mardoqueo Hinojosa
City Engineer
415 W. University Drive
Edinburg, TX 78539
Email: mhinojosa@cityofedinburg.com

1.3. Timeline

Release Project Date:
June 26, 2024

Question Submission Deadline:
July 8, 2024, 3:00pm

Proposal Submission Deadline:
July 16, 2024, 3:00pm

2. Legal Notice

2.1. Notice to Respondents

The City of Edinburg is soliciting sealed proposals from qualified vendors for Engineering Services Rotation.

Sealed Proposals must be submitted electronically or received by the City Secretary's Office no later than:

3:00 pm, Tuesday, July 16, 2024.

All sealed proposals must be received either electronically or at the designated location by the deadline shown. Proposals received after the deadline will not be considered for the award of the contract and shall be considered void and unacceptable.

All proposals will be opened, and respondent's names publicly read aloud promptly in the City Hall Community Room, at 415 W. University Dr., Edinburg, TX 78539, at 3:00 pm, Tuesday, July 16, 2024.

To obtain a copy of the Request for Qualifications or submit an electronic proposal please visit:

https://procurement.opengov.com/portal/cityofedinburg

If a Respondent chooses to submit a Hard Copy Proposal, it must be delivered in a sealed envelope with a return address and clearly marked "City of Edinburg RFQ No. 2024-9 to the City Secretary's Office prior to the RFQ opening date and time. The receiving time in the City Secretary's Office will be the governing time for acceptability of the proposals. The respondent's firm name shall appear on the outside of the envelope.

Submit Hard Copy Proposals to:

If submitting Electronic: https://procurement.opengov.com/portal/cityofedinburg

If Hand-Delivering Bids: 415 W. University Drive

c/o City Secretary Department (1st Floor)

RFQ No. 2024-9

If you have any questions or require additional information contained in the RFQ, you may contact Criselda Lozano, Purchasing Manager. Please be sure to submit your questions via OpenGov Procurement at the website listed above no later than 3:00 pm on Monday, July 8, 2024.

The City reserves the right to reject any or all proposals and to waive informalities or technicalities and to accept the Proposal deemed the most advantageous to the City, and hold the proposal for a period of 90 days without taking action.

3. Instructions, Terms and Conditions

3.1. General Instructions

PURPOSE

The purpose of these solicitation documents is to execute a Professional Services Contract for: 2024-9 Engineering Services Rotation

INTENT

The services to be provided under this RFQ shall be in accordance with and shall meet all specifications and/or requirements as shown in this solicitation for RFQ. There is no intention to disqualify any respondent who can meet the requirements.

DEVIATION FROM SPECIFICATION

Please read your requirements thoroughly and be sure that the RFQ offered complies with all requirements/specifications noted. Any variation from the solicitation requirements/specifications must be clearly indicated by letter, on a point by point basis, attached to and made a part of your RFQ. If no exceptions are noted, and you are the successful respondent, it will be required that the service(s) be provided as specified.

SUBMITTAL OF "HARD COPY" RFQ

If submitting a Hard Copy RFQ, it must be submitted in a sealed envelope by the vendor. **Submit two (2) complete sets of the response, one (1) original marked "ORIGINAL," and one (1) Digital Copy in a flash drive**. Each RFQ must be completely filled out and SUBMITTED IN ORIGINAL FORM complete with all supporting documentation. RFQs submitted by facsimile (fax) will not be accepted. Submittal of an RFQ in response to this solicitation constitutes an offer by the respondent. Once submitted, RFQs become the property of the City of Edinburg and as such the City reserves the right to use any ideas contained in any RFQ regardless of whether that respondent/firm is selected. Submission of a RFQ in response to this solicitation, by any respondent, shall indicate that the respondent(s) has/have accepted the conditions contained in the RFQ, unless clearly and specifically noted in the RFQ submitted and confirmed in the contract between the City and the successful respondent otherwise. RFQs which do not comply with these requirements may be rejected at the option of the City. RFQs must be filed with the City of Edinburg before the deadline day and hour. No late RFQs will be accepted. Failure to meet RFQ requirements may be grounds for disqualification.

If Hand-Delivering Bids: 415 W. University Drive

c/o City Secretary Department (1st Floor)

If submitting Electronic: https://procurement.opengov.com/portal/cityofedinburg

AUTHORIZATION TO BIND RESPONDENT TO RFQ

RFQs MUST give full firm name and address of respondent, and be manually signed. Failure to do so will disqualify your RFQ. Person signing bid must show title or AUTHORITY TO BIND HIS/HER FIRM IN A CONTRACT. Firm name and authorized signature must appear on each page that calls for this information. The legal status of the Respondent whether corporation, partnership, or individual, shall also be stated in the RFQ. A corporation shall execute the RFQ by its duly authorized officers in accordance with its corporate by-laws and shall also list the state in which it is incorporated. A partnership Respondent shall give full names and addresses of all partners. All partners shall execute the RFQ. Partnership and Individual Respondent shall state in the proposal the names and addresses of all persons with a vested interest therein. The place of residence of each Respondent, or the office address in the case of a firm or company, with county and state and telephone number, shall be given after the signature.

ALTERATIONS/AMENDMENTS TO RFQ

RFQ CANNOT be altered or amended after opening time. Alterations made before opening time must be initialed by respondent guaranteeing authenticity. No RFQ may be withdrawn after opening time without acceptable reason in writing and only after approval by the City of Edinburg.

NO RESPONSE TO RFQ

If unable to submit a RFQ, respondent should return inquiry giving reasons.

LIST OF EXCEPTIONS

The respondent shall attach to his/her RFQ a list of any exceptions to the specifications/ requirements.

TIME ALLOWED FOR ACTION TAKEN

The City of Edinburg may hold RFQ's **90 days** after deadline without taking action. Respondents are required to hold their RFQ's firm for same period of time.

RIGHT TO REJECT/AWARD

The City of Edinburg reserves the right to reject any or all RFQs, to waive any or all formalities or technicalities, and to make such awards of contract as may be deemed to be the best and most advantageous to the City of Edinburg.

NUMBER OF CONTRACTS

THE CITY reserves the right to award one, more than one, or no contract(s) in response to this RFQ.

INDEMNIFICATION CLAUSE

The Respondent agrees to indemnify and save harmless the City, from all suits and actions of every nature and description brought against them or any of them, for or on account of the use of patented appliances, products or processes, and he shall pay all royalties and charges which are legal and equitable. Evidence of such payment or satisfaction shall be submitted upon request of the Assistant Purchasing Manager, as a necessary requirement in connection with the final estimate for payment in which such patented appliance, products or processes are used.

ADDENDA AND MODIFICATIONS

Respondent shall carefully examine the RFQ forms, specifications/requirements, and instructions to Respondents. Should the respondent find discrepancies in, or omissions from specifications/requirements, or other documents, or should he/she be in doubt as to their meaning, he/she should request an interpretation via the OpenGov portal:https://procurement.opengov.com/portal/cityofedinburg and obtain clarification by addendum prior to submitting any RFQ. Explanations, interpretations, and supplemental instructions shall be in the form of written Addenda which shall become a part of the Contract documents. Said Addenda shall be available thru the e-procurement portal and e-mailed to all prospective Respondents. All Addenda issued in respect to this project shall be considered official changes to the original RFQ documents. Verbal statements in response to inquiries and/or requests for explanations shall not be authoritative nor binding. It shall be the Respondent(s) responsibility to ensure that they have received all Addenda in respect to this project. Furthermore, Respondents are advised that they must recognize, comply with, and attach a signed copy of each Addendum which shall be made part of their RFQ Submittal. Respondent(s) signature on Addenda shall be interpreted as the respondent's "recognition and compliance to" official changes as outlined by the City of Edinburg and as such are made part of the original solicitation documents. Failure of any respondent to receive any such addendum or interpretation shall not relieve such Respondent from its terms and requirements. The City may issue a written addendum no later than five calendar days prior to the date bids must be received. Addendums are available online at https://procurement.opengov.com/portal/cityofedinburg

SYNONYM

Where in this solicitation package SERVICES is used, its meaning shall refer to the request for qualifications Engineering Services Rotation as specified.

ASSIGNMENT

Respondents are advised that the City of Edinburg shall not allow the successful respondent to sell, assign, transfer, or convey any part of any contract resulting from this RFQ in whole or in part, to a third party without the written approval of the City of Edinburg.

RESPONDENT'S EMPLOYEES

Neither the Respondent nor his/her employees engaged in fulfilling the terms and conditions of this Service Contract shall be considered employees of the City. The method and manner of performance of such undertakings shall be under the exclusive control of the vendor on contract. The City shall have the right of inspection of said undertakings at any time.

INTERPRETATIONS

Any questions concerning the project and/or specifications/requirements with regards to this solicitation for statement(s) of qualifications shall be directed to the designated individuals as outlined in the RFQ. Such interpretations, which may affect the eventual outcome of this request for statements of qualifications, shall be furnished in writing to all prospective Respondents via Addendum. No interpretation shall be considered binding unless provided in writing by the City of Edinburg in accordance with paragraph entitled **"Addenda and Modifications".**

STATUTORY REQUIREMENTS

It shall be the responsibility of the successful respondent to comply with all applicable State & Federal laws, Executive Orders and Municipal Ordinances, and the Rules and Regulations of all authorities having jurisdiction over the work to be performed hereunder and such shall apply to the contract throughout, and that they will be deemed to be included in the contract as though written out in full in the contract documents.

RFQ PREPARATION COSTS

The City of Edinburg shall not be held liable for any costs incurred by any respondent for work performed in the preparation of and production of a RFQ or for any work performed prior to execution of contract.

CONFIDENTIAL INFORMATION

Any information deemed to be confidential by the respondent should be clearly noted on the pages where confidential information is contained; however, the City cannot guarantee that it will not be compelled to disclose all or part of any public record under Texas Public Information Act, since information deemed to be confidential by the respondent may not be considered confidential under Texas Law, or pursuant to a Court order.

VERBAL THREATS

Any threats made to any employee of the City, be it verbal or written, to discontinue the providing of item/material/services for whatever reason and/or reasons shall be considered a breach of contract and the City will immediately sever the contract with the Respondent/Consultant on contract.

RIGHT TO AUDIT

The City of Edinburg reserves the right to audit the vendor's books and records relating to the performance of this contract. The City of Edinburg, at its own expense, shall have the right at all reasonable times during normal business hours and upon at least twenty-four (24) hours' advance notice, to audit, to examine, and to make copies of or extracts from the books of account and records maintained by the vendor(s) with respect to the Supply/Service and/or Purchase Contract. If such audit shall disclose overpayment by City to vendor, written notice of such overpayment shall be provided to the vendor and the amount of overpayment shall be promptly reimbursed by vendor to the City. In the event any such overpayment is not paid within ten (10) business days after receipt of such notice, the unpaid amount of such overpayment shall bear interest at the rate of one percent (1%) per month from the date of such notice until paid.

PAST PERFORMANCE

Respondent's past performance shall be taken into consideration in the evaluation of RFQ submittal.

JURISDICTION

Contract(s) executed as part of this solicitation shall be subject to and governed under the laws of the State of Texas. Any and all obligations and payments are due and performable and payable in Hidalgo County, Texas.

VENUE

The parties agree that venue for purposes of any and all lawsuits, cause of action, arbitration, and/or any other dispute(s) shall be in Hidalgo County, Texas.

CONSIDERATION OF LOCATION OF BIDDER'S PRINCIPAL PLACE OF BUSINESS

The City may give local vendors, whose principal place of business is located within the City of Edinburg, and whose bid is within five percent (5%) of the lowest bid price preference as allowed by Section 271.9051 of the Local Government Code.

AWARD

Respondents are advised that the City of Edinburg is soliciting RFQs and award shall be made to the respondent that in the opinion of the City of Edinburg is the best qualified.

The City of Edinburg reserves the right to award contract(s) based solely on the written proposals. The City also reserves the right to request oral interviews.

FINAL SELECTION AND THE CITY COUNCIL APPROVAL

Selection shall be made of one or more proposers deemed to be fully qualified and best suited among those submitting Proposals on the basis of the evaluation factors included in the Request for Qualifications, if so stated in the Request for Qualifications. Negotiations shall be conducted with the proposers selected. After negotiations have been conducted with each proposer selected, the agency shall select the proposer which, in its opinion, has made the best proposal, and shall award the contract to that proposer. The City may cancel this Request for Qualifications or reject the Qualifications at any time prior to an award, and is not required to furnish a statement of the reasons why a particular proposal was not deemed the most advantageous. Should the City determine in writing and in its sole discretion that only one proposer is fully qualified, or that one proposer is clearly more highly qualified than the others under consideration, a contract may be negotiated and awarded to that proposer. The award document will be a contract incorporating by reference all the requirements, terms and conditions of the solicitation and the contractor's proposal as negotiated. After the selection of the most qualified firm(s), scope of services and billing rates will be negotiated and used as attachments to the City's Professional Services Agreement. This Agreement will then be submitted to the City Council for approval. If the City and the selected firm cannot successfully negotiate an agreement, then the City will enter into negotiations with the next best qualified firm on the evaluation rating list. This procedure may be repeated until one (1) or more firms has been selected and approved by the City Council.

PAYMENT

The City of Edinburg will execute payment by mail in accordance with the State of Texas Pay Law after SERVICES have been completed, introduced to the City, and found to meet City of Edinburg specifications/requirements. No other method of payment will be considered.

CONFIDENTIALITY OF INFORMATION AND SECURITY

Should the successful respondent become the holder of and have access to confidential information in the process of fulfilling its responsibilities in connection with an awarded contract the successful respondent agrees that it shall keep such information confidential and will comply fully with the laws and regulations of the State of Texas, ordinances and regulations of the City, and any applicable federal laws and regulations relating to confidentiality.

EQUAL EMPLOYMENT OPPORTUNITY

Respondent agrees that they will not discriminate in hiring, promotion, treatment, or other terms and conditions of employment based on race, sex, national origin, age, disability, or in any way violate Title VII of 1964 Civil Rights Act and amendments, except as permitted by said laws.

TERMINATION OF CONTRACT

The City of Edinburg reserves the right to terminate the contract if, in the opinion of the City of Edinburg, the successful vendor's performance is not acceptable, no funds are available, or if the City wishes, without cause, to discontinue this contract. Termination will be in written form allowing a 30-day notice.

HISTORICALLY UNDERUTILIZED BUSINESS

Firm(s)/Sub Firm(s) will be required to comply with the President's Executive Order No. 11236 and Order No. 11375 which prohibits discrimination in employment regarding race, creed, color, sex, or national origin. Firm(s)/Sub Firm(s) must comply with the Title VI of the Civil Rights Act of 1964, Minority and Women Owned Business Enterprise standards and affirmative action requirements.

ETHICAL STANDARD

No City official or employee shall have interest in any contract resulting from this bid.

IF YOU HAVE ANY QUESTIONS ABOUT COMPLIANCE, PLEASE CONSULT YOUR OWN LEGAL COUNSEL. COMPLIANCE IS THE INDIVIDUAL RESPONSIBILITY OF EACH PERSON OR AGENT OF A PERSON WHO IS SUBJECT TO THE FILING REQUIREMENT. AN OFFENSE UNDER CHAPTER 176 IS A CLASS "C" MISDEMEANOR.

3.2. INSURANCE REQUIREMENTS

Staff may waive insurance requirements for contracts $0 - $4,999.99, including but not limited to contracts for food, materials, supplies, and construction. Workers' Compensation in amounts which satisfy statutory coverage shall be required for construction projects.

The following insurance requirements will be included in all City contracts of $5,000 - $14,999.99. In contracts not involving building and construction projects, as that activity is defined in TEX. LABOR CODE §406.096, contractors may obtain alternative form of worker accident insurance with minimum limits of liability of $100,000 per claim.

Minimum Insurance Requirements

Type of Coverage Limits of Liability

Worker's Compensation Statutory Coverage

Comprehensive General Liability

(City named as additional insured)

Bodily Injury $250,000 each person/$500,000 each occurrence

Property Damage $100,000 each occurrence/$100,000 aggregate

or $500,000 combined single limits

The following insurance requirements will be included in all **City contracts of $15,000 or more.**

(1) The successful bidder will be required to carry the following insurance coverage and limits of coverage, as well as list the City as an additional insured to liability coverage as requested by the City. In addition, the successful bidder shall provide the City with evidence of coverage and furnish acceptable proof of payment of insurance premiums.

(2) The successful bidder will be required to secure and/or have insurance coverage in force with an admitted property and casualty insurance company licensed by the State of Texas to conduct business in the State of Texas.

(3) In contracts not involving building and construction projects, as that activity is defined in TEX. LABOR CODE §406.096, contractors may obtain alternative form of worker accident insurance with minimum limits of liability of $100,000 per claim

Minimum Insurance Requirements

Type of Coverage Limits of Liability

Worker's Compensation Statutory Coverage

Employer's Liability Bodily Injury by Accident:

$100,000 each accident

Bodily Injury by Disease:

$100,000 each employee/$500,000 policy limit

Comprehensive General Liability

Bodily Injury $250,000 each person/$500,000 each occurrence

Property Damage $100,000 each occurrence/$100,000 aggregate

or $500,000 combined single limits

Comprehensive Auto Liability

Bodily Injury $100,000 each person/$500,000 each occurrence

Property Damage $100,000 each occurrence/$100,000 aggregate

or $500,000 combined single limits

City's Protective Liability

Bodily Injury $250,000 each person/$500,000 each occurrence

Property Damage $100,000 each occurrence/$100,000 aggregate

or $500,000 combined single limits

Policies must name the City of Edinburg as an Additional Insured.

Certificates of insurance naming the CITY as an additional insured shall be submitted to the CITY for approval prior to any services being performed by Contractor. Each policy of insurance required hereunder shall extend for a period equivalent to, or longer than the term of the Contract, and any insurer hereunder shall be required to give at least thirty (30) days written notice to the CITY prior to the cancellation of any such coverage on the termination date, or otherwise. This Contract shall be automatically suspended upon the cancellation, or other termination, of any required policy of insurance hereunder, and such suspension shall continue until evidence that adequate replacement coverage is provided to the CITY. If replacement coverage is not provided within thirty (30) days following suspension of the Contract, the Contract shall automatically terminate.

4. Specifications

4.1. Engineering Services RFQ

The selected firm(s) will report to, and operate under, the direction of City of Edinburg's Department of Engineering staff. Must have a Texas Licensed Professionals with superior background, training, and qualifications meeting all requirements of this RFQ, Registered or licensed in the State of Texas, and shall provide services and have staffing covering some or all of the specialized categories listed below:

- Management and monitoring of capital improvement project
- Management and monitoring of planning projects
- Administration and monitoring of regional, state and federal grants
- General civil engineering support services as assigned

4.2. Submittal Requirements

The RFQ must be submitted according to the instructions outlined herein. Each response should include, at a minimum, the following items not excluding the selection process criteria:

A. Transmittal letter – Indicate interest and commitment to perform services for the City of Edinburg, include contact information (physical address, telephone, fax, cell phone, and email address) for the primary person responsible for your RFQ who will be the point of contact for the City on all correspondence and communications pertaining to the RFQ. State whether any addendums to this RFQ have been received by your firm and whether consideration of their content has been included in your RFQ. The letter must be signed by an officer of the firm who is authorized to bind the firm to contract and shall contain a statement to this effect;

B. Firm Qualification and Experience – Discuss the firm's experience and history in performing engineering and project management services in a timely manner, particularly for other governmental agencies in the past Two (2) years. Discuss the firm's uniqueness to best perform these services for the City. Identify the office location that will be providing the services and the approach to handling part-time staffing needs for smaller assignments.

C. Team Member Qualifications and Experience – Submit resumes summarizing qualifications and experience of project manager, key staff and any support staff likely to be assigned to the work.

D. References – Provide at least three references (names and current phone numbers) from recent work and List all past projects with the City of Edinburg for each proposed team member. Include a brief description of the projects associated with the reference, and the role of the individual.

E. Insurance - Provide information on the types and amounts of insurance carried by the PSP, including General Liability, Auto Coverage, Worker's Compensation, and Professional Liability Coverage. A list of any insurance claims against the firm within the past 5 years.

F. Professional Services Agreement – Provide a statement that the Professional Services Agreement has been read, that the firm will meet the prerequisite insurance requirements, and the firm, if selected, agrees to enter in to such agreement.

G. Contact Information – Each firm must submit the firms two (2) different contact information (Name, Title, Address, Phone Number, Mobile Number, and Email Address).

H. Presentation – Electronic submittal only.

CERTIFICATE OF INTERESTED PARTIES (Form 1295)

In 2015, the Texas Legislature adopted House Bill 1295, which added section 2252.908 of the Government Code. The law states that a governmental entity or state agency may not enter into certain contracts with a business entity unless the business entity submits a disclosure of interested parties to the governmental entity or state agency at the time the business entity submits the signed contract to the governmental entity or state agency. The law applies only to a contract of a governmental entity or state agency that either (1) requires an action or vote by the governing body of the entity or agency before the contract may be signed or (2) has a value of at least $1 million. The disclosure requirement applies to a contract entered into on or after January 1, 2016. For more information go to the Texas Ethics Commission web page at

CONFLICT OF INTEREST

CHAPTER 176 OF THE TEXAS LOCAL GOVERNMENT CODE

Effective January 1, 2006, Chapter 176 of the Texas Local Government Code requires that any vendor or person considering doing business with a local government entity disclose in the Questionnaire Form CIQ, the vendor or person's affiliation or business relationship that might cause a conflict of interest with a local government entity. By law, this questionnaire must be filed with the records administrator of the City of Edinburg not later than the 7th business day after the date the person becomes aware of facts that require the statement be filed. See Section 176.006, Local Government Code. A person commits an offense if the person violates Section 176.006, Local Government Code. An offense under this section is a Class C misdemeanor.

For more information or to obtain Questionnaire CIQ go to the Texas Ethics Commission web page at https://www.ethics.state.tx.us/data/forms/conflict/CIQ.pdf

STATE OF TEXAS	**§**	**AGREEMENT BETWEEN THE CITY OF EDINBURG AND PROJECT MANAGEMENT CONSULTANT FOR PROFESSIONAL SERVICES PURSUANT RFQ NO. XXXX-XXX**
COUNTY OF HIDALGO	**§**	
CITY OF EDINBURG	**§**	

The City of Edinburg, Hidalgo County, Texas, a municipal corporation, (hereinafter **"City"**) and **PROJECT MANAGEMENT CONSULTANT** (hereinafter **"Consultant"**), are the parties to this Agreement.

RECITALS

WHEREAS, City has authorized staff to request proposals for the On-Call Professional Services, the Consultant shall provide for specific projects as may be requested by the City. Such services shall be defined, scheduled, and authorized in subsequent Task Orders. Services may include, but not be limited to Engineering, PROFESSIONAL SERVICES, and or other as-needed services as stated in Exhibit "A", and

WHEREAS, Consultant has the professional knowledge and abilities to perform the professional engineering and PROFESSIONAL SERVICES; and

WHEREAS, City desires to engage Consultant to render services in connection therewith:

NOW, THEREFORE, City and Consultant do mutually agree as follows:

SECTION I
EMPLOYMENT OF CONSULTANT

A. City agrees to employ Consultant to furnish and provide the Services, as stated in this agreement and **Exhibit "A"**. Upon receipt of Services to the City's satisfaction, the City agrees to pay Consultant as stated in this Agreement.

SECTION II
SERVICES OF CONSULTANT

A. The Consultant shall, in the scope of his work, perform the Services identified in **Exhibit "A"** of this document. City shall provide Consultant with authorization to proceed, after execution of this Agreement.

B. Nothing contained in this Agreement is intended by the parties to create a partnership or joint venture between the parties, and any implication to the contrary is hereby expressly disavowed. It is understood and agreed that this Agreement does not

create a joint enterprise, nor does it appoint either party as an agent of the other for any purpose whatsoever. Except as otherwise specifically provided herein, neither party shall in any way assume any of the liability of the other for acts of the other or obligations of the other.

SECTION III
RESPONSIBILITY OF THE CITY

A. City will facilitate Consultant's work with the following tasks:

1. Provide Consultant with its requirements for the Services.

2. Assist Consultant by providing information reasonably available to the City and pertinent to the Services.

3. Facilitate access to and make provisions for Consultant to enter upon public property as reasonably required for Consultant to perform its Services.

4. Examine all reports, sketches, estimates, drawings, proposals, and other documents presented by Consultant and render in writing decisions pertaining thereto within a reasonable time so as not to delay the Services of the Consultant.

5. Give prompt written notice to Consultant whenever City observes or otherwise becomes aware of any defect in Services.

6. City's representative with respect to interpretation and implementation of the Services and this Agreement will be the City Engineer or such other representative that the City may appoint by written notice to Consultant with whom Consultant will communicate regarding all matters pertaining to this Agreement. Said representative will make all arrangements for consultation by Consultant with employees or designees of City. In addition, said representative shall have authority and responsibility to define and agree upon the scope and specification of the Services, require and receive reports regarding the progress of the Services, and terminate the performance of the Services or any phase thereof in accordance with the provisions of this Agreement.

SECTION IV
RESPONSIBILITIES OF CONSULTANT

A. Consultant shall perform the Services described in **Exhibits "A".**

B. Consultant shall perform its services with care, skill, and diligence, in accordance with the applicable professional standards currently recognized by its profession, and shall be responsible for the professional quality, technical accuracy, completeness, and coordination of all reports, plans, information, and other items and Services furnished under this Agreement. Consultant shall comply with all applicable

federal, state, and local laws, ordinances, codes, and regulations in performing the Services. If Consultant fails to meet applicable professional standards, Consultant shall without additional compensation correct or revise any errors or deficiencies, with or without request to do so by the City.

C. Consultant shall be responsible for the professional quality, technical accuracy, timely completion, and the coordination of Services furnished by Consultant under this Agreement. Consultant shall keep the City informed of the Services performed under this Agreement. In connection with the performance of the Services by Consultant, Consultant agrees to promptly and fully disclose to City any information regarding the Services as City may request.

D. Consultant will develop and maintain a detailed schedule for completion of the Services. The schedule will be a work plan showing activities to be performed and their sequence; and, in addition, activities will contain duration, manpower required, and estimated cost. A preliminary schedule shall be submitted to the City within ten (10) days after execution of a Job Task Order for review and establishment of the level of detail to be included.

E. Consultant will submit monthly progress data for the reporting period which will include the percentage complete and actual start date and actual finish date for all activities worked on by the Consultant during the period. Any changes in delivery dates will be reported. Other information, such as actual hours expended, will be furnished monthly, or as requested, by the City. If requested by the City, schedule update meetings will be held to discuss the results of schedule analysis and necessary action to meet the requirements of the schedule.

F. Consultant shall perform Services necessary to accomplish the work specified in this Agreement, in accordance with this Agreement.

G. City's review or approval of reports, and other services furnished hereunder shall not in any way relieve Consultant of responsibility for the technical adequacy of the work. Neither City's review, approval, or acceptance of, nor payment for any of the Services shall be construed as a waiver of any rights under this Agreement or of any cause of action arising out of the performance of this Agreement.

H. Consultant shall be and shall remain liable, in accordance with applicable law, for all damages to City caused by Consultant's negligent performance of any of the Services furnished under this Agreement. Consultant shall not be responsible for any time-delays in the project caused by circumstances beyond Consultant's control.

I. Consultant's obligations under this clause are in addition to the Consultant's other expressed or implied obligations under this Agreement or state law and in no way diminish any other rights that City may have against Consultant for consultant's errors or omissions.

J. All reports, drawings, plans, and other documentation pertaining to the Services become the property of City.

SECTION V
PAYMENT AND FEES

City agrees to pay Consultant for recommendations, reports, design, specifications, and such other services herein contracted for as follows:

A. City hereby agrees to pay a sum not to exceed that which is included in a specific Task Order and authorized by a Notice to Proceed, notwithstanding any contrary indications that may be contained in Consultant's proposal, for services to be performed and reimbursable costs incurred under this Agreement. City shall pay Consultant for services rendered on a lump sum basis pursuant to any specific Task Order and in the manner set forth therein. Consultant shall submit all invoices to City in the manner specified herein. Except as specifically authorized by City in writing, Consultant shall not bill City for duplicate services performed by more than one person. Consultant and City acknowledge and agree that compensation paid by City to Consultant under this Agreement is based upon Consultant's estimated costs of providing the services required hereunder, including salaries and benefits of employees and subcontractors of Consultant. Consequently, the parties further agree that compensation hereunder is intended to include the costs of contributions to any pensions and/or annuities to which Consultant and its employees, agents, and subcontractors may be eligible. City therefore has no responsibility for such contributions beyond compensation required under this Agreement.

B. City is entitled to impose a set-off against payment based on any of the following:

a. Claims have been made against City based on Consultant's conduct in the performance or furnishing of Services, or City has incurred costs, losses, or damages resulting from Consultant's conduct in the performance or furnishing of Services, including but not limited to claims, costs, losses, or damages from workplace injuries, adjacent property damage, and non-compliance with Laws and Regulations;

b. Consultant has failed to take reasonable and customary measures to avoid damage, delay, disruption, and interference with Services and related work;

c. Consultant has failed to provide and maintain required insurance;

d. City has been required to remove or remediate a Hazardous Environmental Condition for which Contractor is responsible;

e. City has incurred extra charges or engineering costs related to submittal reviews, evaluations of proposed substitutes, tests and inspections, or return visits to manufacturing or assembly facilities;

f. Any Services are defective, requiring correction or replacement;

g. City has been required to correct defective Services or has accepted defective Services;

h. Liens have been filed in connection with the Services; or

i. Other items entitle City to a set-off against the payment amount.

C. If City imposes any set-off against payment, City will give Consultant immediate written notice stating the reasons for such action and the specific amount of the reduction, and promptly pay Consultant any amount remaining after deduction of the amount so withheld. City shall promptly pay Consultant the amount so withheld, or any adjustment thereto agreed to by City and Consultant, if Consultant remedies the reasons for such action. The reduction imposed will be binding on Consultant unless it duly submits written notice contesting the reduction within 30 days of receiving City's written notice.

D. All fees payable to Consultant under this Agreement shall be made in full, and without any withholding, deduction, or offset of any state or federal withholding taxes, FICA, SDI, or income taxes, nor shall the City be obligated to pay any of Consultant's employees' taxes. Consultant hereby covenants and agrees that it shall be solely responsible for all taxes, withholding, FICA, SDI, and other similar items (both employee and employer portions) with respect to all fees paid by the City under this Agreement, and agrees to indemnify and hold the City harmless with respect to such taxes and withholding.

E. Consultant and its employees shall not be eligible for, participate in, or be entitled to compensation in lieu of any insurance, benefit, retirement, or other plan or program provided by the City to its employees.

F. Consultant shall provide an invoice in accordance with City regulations. Payment terms shall be net thirty (30) days from receipt of invoice.

G. The City may, at any time, request Consultant to make changes within the scope of the Services or to perform extra work. If any request by the City for a change or extra work causes an increase or decrease in the cost or the time required for performance of the work, or any change to this Agreement, Consultant shall, within fourteen (14) days from the date it receives the City's request, unless the City Engineer grants additional time in writing, submit in writing a proposal for accomplishing such changed or extra work. This proposal shall define, if applicable, any increase or decrease in cost or time of completion or other change to this Agreement. The City must approve

any change orders, pursuant to the City's Code of ordinances and policies and procedures and any other applicable laws of this State, before making the changes. The City will not be liable for any costs incurred by Consultant from performance of a change or extra work prior to issuance of a change order to this Agreement.

H. The total contract price may not be increased because of the changes unless additional money for increased costs is appropriated for that purpose from available funds or is provided for by the authorization of the issuance of time warrants.

I. Prior to and as a condition of final payment to the Consultant following termination or expiration of this Agreement as defined below, the Consultant shall deliver to the City a release in form and substance satisfactory to the City, discharging it and its officers, agents, and employees of all liabilities, obligations, and claims arising out of this Agreement and the performance thereof.

SECTION VI
TERM OF AGREEMENT

A. Except as provided below, this Agreement, and the Services to be performed under it, shall commence on the date this Agreement is executed by both parties, and shall continue thereafter through and the earlier of (i) two (2) years from the date of execution or (ii) until the Services are declared complete in a written instrument signed by the City Engineer and the City Manager. The City shall have the right, in its sole discretion, to extend the term of this Agreement for an additional year upon approval from the City. If approved by City, City shall provide Consultant with a written notice of the approval of the extension.

B. City may terminate this Agreement upon giving 30 days' prior written notice thereof to Consultant. In addition, City shall have the right, upon written notice, to cancel this Agreement immediately if, in the City's sole judgment, the Services rendered by Consultant breach or violate any of the provisions of this Agreement.

C. Upon termination or completion of this Agreement, City shall have no liability to Consultant except for charges for Services performed by Consultant and accepted by the City prior to receipt of notice of termination or cancellation. The terms and conditions in this Agreement that by their sense and context are intended to survive the performance hereof by either or both parties hereunder shall so survive the termination, cancellation, or completion of performance of this Agreement.

D. Upon termination or completion of Consultant's Services hereunder or at such other time as may be requested by City, Consultant shall return to City within ten (10) days of termination, completion, or request all documents, records, notebooks, including copies thereof, whether prepared by Consultant or others, in Consultant's possession and related to the Services.

E. The City reserves the right to suspend work on the Services, with or without cause, in whole or in part, upon giving notice to Consultant. Consultant shall resume the Services so suspended when directed to do so by the City. The City shall have no liability to Consultant except for charges for Services performed by Consultant and accepted by the City prior to receipt of notice of suspension of Services. If only a portion of the Services are suspended, Consultant shall be compensated only for Services of which are not suspended and are actually performed during such suspension.

F. Upon termination of this Agreement or suspension of Services under this Section, the City may take over the work and may obtain the services of another entity to complete the work under this Agreement.

SECTION VII
MINIMUM INSURANCE REQUIREMENTS

Consultant shall be adequately insured and carry liability, workers compensation, automobile insurance and professional liability for injury to its employees and others incurring loss or injury as a result of the acts of Consultant or its employees. In accordance with City ordinances, Consultant shall be required to hold the following minimum insurance coverage throughout the duration of this agreement:

A. Workers Compensation
In accordance with State statute.

B. Comprehensive General Liability

1. Bodily Injury
$250,000 each person
$500,000 each occurrence
2. Property Damage
$100,000 each occurrence
$100,000 each aggregate

or $500,000 combined single limits

C. Comprehensive Auto Liability
1. Bodily Injury
$100,000 each person
$500,000 each occurrence
2. Property Damage
$100,000 each occurrence
$100,000 aggregate
or $500,000 combined single limits

D. City's Protective Liability

1. Bodily Injury

$250,000 each person
$500,000 each occurrence

2. Property Damage

$100,000 each occurrence
$100,000 each aggregate

or $500,000 combined single limits

E. Professional Liability

1. Professional

$1,000,000 per claim and in the aggregate

F. Evidence of the above insurance coverage is attached as Exhibit ”B” and the City of Edinburg shall be listed as an additional insured.

G. If at any time and for any reason Consultant fails to provide, maintain, keep in force and effect, or deliver to the City proof of, any of the insurance required and such failure continues for ten (10) days after Notice thereof from City to Consultant, City may, but shall have no obligation to, procure single interest insurance for such risks covering City (or, if no more expensive, the insurance required by this Agreement), and Consultant shall, within ten (10) days following City’s demand and Notice, pay and reimburse City therefor with interest at Prime Rate plus 2%, the Prime Rate being that in place on the date of Notice, from the date of payment by the City until repayment of City in full by Consultant.

H. With respect to each and every one of the insurance policies required to be obtained, kept, or maintained under the terms of this Agreement, on or before the date on which each such policy is required to be first obtained and at least fifteen (15) days before the expiration of any policy required hereunder previously obtained, Consultant shall deliver evidence reasonably acceptable to City showing that such insurance is in full force and effect.

I. Consultant hereby agrees as follows:

1. To punctually pay or cause to be paid all premiums and other sums payable under each insurance policy required to be obtained, kept, and maintained pursuant to this Lease;

2. To maintain in full force and effect the policies required to be carried to the extent so required to be carried pursuant to the terms hereof;

3. To ensure that all Casualty Proceeds are paid to the Party entitled to receive same;

4. Not, at any time, to take any action (or omit to take action) which action (or omission) would cause any insurance policies required to be obtained, kept, and maintained under this Lease to become void, voidable, unenforceable, suspended, or impaired in whole or in part or which would otherwise cause any sum paid out under any such insurance policy to become repayable in whole or in part; and

5. Promptly deliver Notice to City of any facts or circumstances of which it is aware which, if not disclosed to its insurers or re-insurers, is likely to affect adversely the nature or extent of the coverage to be provided under any insurance policy required hereunder.

SECTION VIII
ALTERNATE DISPUTE RESOLUTION/NEUTRAL PARTY

A. If any dispute, controversy, or claim between or among the Parties arises under this Agreement or is related in any way to this Agreement or the relationship of the Parties hereunder (a "Dispute"), the Parties shall first attempt in good faith to settle and resolve such Dispute by meeting at a mutually agreeable time and place to discuss the Dispute within seven (7) days following the original written notice of any Dispute by the party making such a claim. The Parties shall seek to resolve the Dispute in writing within fourteen (14) days following the original written notice of any Dispute by the party making such a claim.

B. If a mutual resolution and settlement are not obtained at the meeting, the Parties shall participate in good faith in formal mediation, within thirty (30) days following the original written notice of any Dispute, with a mutually agreeable mediator at a mutually agreeable time and place. No settlement reached under this provision shall be binding on the Parties until reduced to a writing signed by a representative of Contractor and the City Manager. Unless the parties expressly agree otherwise, each party shall bear its own costs and legal and expert fees incurred in the mediation, and evenly share the costs of the mediator. If after proceeding in good faith the parties, with the assistance of a neutral mediator, do not resolve the dispute within forty-five (45) days following the original written notice of any Dispute, the parties may proceed in accordance with Section IX below.

SECTION IX
CONTROLLING LAW, MANDATORY VENUE, AND FEES AND EXPENSES

A. After exhausting the procedures set forth above, either party may initiate litigation to resolve the dispute. The Law of the State of Texas shall control the Dispute. Venue is mandatory in in State courts located in Hidalgo County, Texas.

B. In the event of any litigation between the parties, the parties shall bear their own costs, including attorneys' fees and expenses.

SECTION X
INDEMNIFICATION

A. To the maximum extent allowed by law, Consultant agrees to and shall indemnify, hold harmless, and defend City, its officers, agents, and employees from any all claims, losses, causes of action and damages, suits and liability of every kind, including all expenses of litigation, court costs, and attorney's fees for injury to or death to any person or for damage to any property, arising out of or directly connected with the negligent or willful conduct of Consultant, its agents, officers and employees, carried out in furtherance of this Agreement.

B. Consultant agrees to assist City in defense of claims or litigation brought against the City related to this project, including any claims related to design or any other services provided by consultant regarding this agreement.

SECTION XI
LIMITATION OF LIABILITY

A. Consultant agrees to limit the City's liability arising from City's acts, errors, or omissions such that the total liability of City shall not exceed Consultant's total fees paid by the City to Consultant for the Services rendered pursuant to the Task Order which is the subject matter of the claim. Consultant agrees that City will not be liable for any indirect, incidental, special, or consequential punitive or multiple damages, including without limitation any damages resulting from loss of use, loss of business, loss of revenue, loss of profits, or loss of data, arising in connection with this Agreement, Consultant's performance of Services, or of any other obligations relating to this Agreement, even if City has been advised of the possibility of such damages. The foregoing limitation of liability shall apply to the maximum extent allowed by law for limitation of City's liability, regardless of the cause of action under which such damages are sought.

SECTION XII
AGREEMENT CONSTRUCTION

A. The headings of the Sections contained in this Agreement are for reference purposes only, and shall not affect the meaning or interpretation of this Agreement. The parties have been advised by counsel in connection with this Agreement. This Agreement shall be construed and interpreted in accordance with the plain meaning of its language, and not for or against either party, and as a whole, giving effect to all of the terms, conditions, and provisions of this Agreement. Nothing contained in this Agreement shall be deemed to confer any right or benefit on any person who is not a party to this Agreement.

SECTION XIII
NO PENDING LITIGATION

A. Consultant represents that there is no action, proceeding, inquiry, or investigation, at law or in equity, before any court, arbitrator, governmental or other board or official, pending to the best knowledge of Consultant threated against or affecting the Consultant or any subsidiaries of the Consultant, questioning the validity or any action taken or to be taken by the Consultant in connection with the execution, delivery, and performance by the Consultant of this Agreement to which the Consultant may be a party or seeking to prohibit, restrain, or enjoin the execution, delivery, or performance by the Consultant hereof or thereof, where in an unfavorable decision, ruling, or finding (i) would adversely effect the validity or enforceability of, or the authority or ability of the Consultant to perform, its obligations under this Agreement to which the Consultant may be party or (ii) would have an adverse effect on the consolidated financial condition or results of operations of the Consultant or on the ability of the Consultant to conduct its business as presently conducted or as proposed or contemplated to be conducted.

SECTION XIV
SEVERABILITY

A. If any term or provision of this Agreement is held by a court of competent jurisdiction to be invalid, void, or unenforceable, the remainder of the provisions of this Agreement shall remain in full force and effect and shall in no way be affected, impaired or invalidated.

SECTION XV
NOTICE

A. Any notices to be given under this Agreement shall be in writing, (i) sent by registered or certified mail, postage prepaid, return receipt requested or (ii) sent by nationally recognized overnight courier (e.g. Federal Express) with electronic tracking, and addressed to such party as follows:

(a) Notices to the City:

City of Edinburg
415 W. University Drive
Edinburg, Texas 78539
Attn.: City Manager

With a copy to:

City of Edinburg
415 W. University Drive
Edinburg, Texas 78539
Attn.: City Attorney

(b) Notices to Consultant:

Address
City, State Zip Code
Attn.: Contact

B. Such Notices shall be deemed delivered (i) in the case of U.S. mail in the manner provided above, three (3) business days after posting or (ii) if sent by nationally recognized overnight courier with electronic tracking service, the next business day after depositing same with such overnight courier before the overnight deadline and if deposited with such courier after such deadline, then the next succeeding business day.

SECTION XVI
NON-APPROPRIATIONS

A. Notwithstanding anything in the Agreement to the contrary, any and all payments which the City is required to make under this Agreement shall be subject to annual appropriation or other availability of funds, as certified by the Director of Finance.

B. If the City cannot appropriate sufficient funding, then either party has the right to terminate the Agreement by providing ten (10) days' written notice to the other party.

SECTION XVII
SUCCESSORS AND ASSIGNS

City and Consultant each bind themselves, their partners, successors, executors, administrators, and assigns to the other party of the Agreement in respect to all covenants of this Agreement. Neither City nor Consultant shall assign, sublet, or transfer interest in this Agreement without written consent of the other.

SECTION XIX
CONFLICT OF TERMS

If any of the terms of this Agreement conflict in any respect with any of the terms of the attached Exhibits or any current or future Job Task Orders, the terms of this Agreement shall be controlling.

SECTION XX
NO WAIVERS OR ACCORD AND SATISFACTION

A. This Agreement may be amended only by written instrument signed by all parties.

B. No failure or delay of any Party, in any one or more instances (i) in exercising any power, right, or remedy under this Agreement or (ii) in insisting upon the

strict performance by the other Party of such other Party's covenants, obligations, or agreements under this Lease, shall operate as a waiver, discharge, or invalidation thereof, nor shall any single or partial exercise of any such right, power, or remedy or insistence on strict performance, or any abandonment or discontinuance of steps to enforce such a right, power, or remedy or to enforce strict performance, preclude any other or future exercise thereof or insistence thereupon or the exercise of any other right, power, or remedy. The covenants, obligations, and agreements of a defaulting Party and the rights and remedies of the other Party upon a default shall continue and remain in full force and effect with respect to any subsequent breach, act, or omission.

C. Without limiting the generality of the above, the receipt by City of any Services with knowledge of a breach by Consultant of any covenant, obligation, or agreement under this Agreement shall not be deemed or construed to be a waiver of such breach. No acceptance of Services or payment to Consultant shall be deemed to be other than on account of the earliest installment of the amounts due under this Agreement, nor shall any endorsement or statement on any check, or any letter accompanying any check, wire transfer or other payment, be deemed an accord and satisfaction. City may accept services or make payment without prejudice to its rights under this Agreement or pursue any remedy provided in this Agreement or provided otherwise by law or equity.

Section XXI
Notice of Governing Law for State and Federal Grant Projects

The Consultant agrees to abide by all applicable laws and regulations and to make all applicable records and other documentary data available at any time for the purpose of an audit and to ensure compliance with relevant State and federal laws, including but not entirely limited to, those provisions found any future Job Task Orders.

EXECUTED by the parties in triplicate originals on this _____ day of _____, 202___.

B2Z ENGINEERING

July 16, 2024

Mr. Mardoqueo Hinojosa, P.E., CFM, CPM, City Engineer
City of Edinburg
415 W. University Drive
Edinburg, Texas 78541

RE: Statement of Qualifications for Engineering Services Rotation
Request for Qualification (RFQ) No. 2024-9

Dear Mr. Hinojosa,

B2Z Engineering, LLC (B2Z) is pleased to present our Statement of Qualifications (SOQ) in response to the City of Edinburg's solicitation for Engineering Services. B2Z is excited and pleased to express our interest and commitment to **continue** providing quality Engineering Services to the City of Edinburg as outlined in the above-referenced RFQ.

B2Z is a **HUB**, **DBE, MBE**, and **WBE** certified engineering consulting and materials testing firm known for its ability to build positive working relationships with our clients. We have extensive experience in providing Engineering Services to the City of Edinburg and stand ready to continue providing those services via this contract.

We have assembled a **uniquely qualified** group of **LOCAL TALENT** with extensive knowledge and technical expertise in a multitude of disciplines including **civil engineering**, **structural/bridge engineering**, street infrastructure evaluation and improvements, pavement management and improvements (**pavement design**), **roadway design**, transportation evaluations, traffic signal design, **hydrology and hydraulics** (drainage analysis and design), erosion and sediment control design, **geotechnical engineering**, and **construction materials testing**. B2Z's team, consisting of professional engineers, technicians, and support staff, operates our **state-of-the-art**, **AASHTO-accredited, TxDOT & USACE-certified** laboratory in Mission. B2Z is equipped and prepared to continue to meet all schedule demands and adhere to all quality standards set by the City of Edinburg.

B2Z's proposed **Senior Project Manager, Mr. Reza Badiozzamani, PE, CFM** will serve as the primary contact person responsible for matters regarding our SOQ. He is located at 900 S. Steward Rd, Ste. 2, Mission, TX office and can be contacted by telephone at (956) 585-3773 or by email at Reza@B2ZEng.com. B2Z acknowledges that no addendums to the RFQ were issued.

Ms. Aisha Gonzalez, Principal of B2Z Engineering, LLC, is authorized to bind the firm to a contract with the City of Edinburg. She is located at 900 S. Steward Rd, Ste. 12, Mission, TX, and can be contacted by telephone at (956) 566-3421 or by email at Aisha@B2ZEng.com.

Please allow me to be the first to say that we sincerely appreciate the opportunity to present our statement of qualifications in response to the City of Edinburg's request. We look forward to the opportunity to continue our working relationship with the city, should we be selected. We thank you for your time, consideration, and attention.

Respectfully,

Aisha Gonzalez
President

Tab II – Firm Qualification and Experience

Firm Introduction

B2Z Engineering, LLC (B2Z) is a **premier engineering consulting firm established in 2009** and licensed through the State of Texas as a Professional Engineering Firm (TBPE #F-11187). B2Z is **100% LOCALLY OWNED AND OPERATED** and has been headquartered in the Rio Grande Valley since 2009. We are a **Woman-Owned Minority Business** with engineering offices and materials testing laboratories in Mission, Brownsville, Seguin, Houston, and Austin.

B2Z has a uniquely qualified group of **LOCAL TALENT** with extensive experience and knowledge in the fields of:

- **Civil Engineering**
- **Structural/Bridge Engineering**
- **Street Infrastructure Evaluation & Improvements**
- **Pavement Management and Improvements (Pavement Design)**
- **Roadway Design**
- **Transportation Evaluation**
- **Hydrology & Hydraulics (Drainage Analysis and Design)**
- **Erosion & Sediment Control Design**
- **Project Management**

Office Providing Services

- Administratively Qualified with Texas Department of Transportation

Services under this contract will be performed out of our Mission office. Additional support, if needed, will be provided from our regional offices in Brownsville, Seguin, Houston, and Austin. B2Z's Mission Engineering & Laboratory Offices employ over 50 professional and technical personnel. Services performed out of this office include but are not limited to civil engineering, bridge design, roadway design, drainage design, construction and/or project management, construction engineering & inspection, geotechnical engineering & testing, and construction materials testing.

Statement of Interest

B2Z has an executed contract with the City of Edinburg to provide professional engineering services as needed. We are ready and able to continue to provide these services. The team assembled for this pursuit is adequately staffed and has the capability to perform the services required. Our team was constructed with the simple goal of being able to provide the City of Edinburg with the highest level of service and necessary resources to ensure the successful completion of all assigned projects. The B2Z team offers extensive first-hand employment experience with local, state, and federal entities and is fully cognizant of all applicable federal, state, and local codes, regulations, and standards relating to transportation infrastructure projects that the City of Edinburg may assign.

B2Z is contracted by various entities to provide **professional engineering services**. These entities include, but are not limited to, the Cities of Edinburg, McAllen, Mission, Hidalgo County, Hidalgo County Drainage District No. 1, Hidalgo County

Regional Mobility Authority, Hidalgo County Urban County Program, and the Texas Department of Transportation (TxDOT). B2Z recently competed on a **statewide TxDOT Bridge On/Off Replacement contract** and was **1 of 19 firms (out of 73 responsive firms) awarded a 5-year contract not to exceed $5M.**

Unique Qualifications

B2Z's team of designers and technicians have worked on various types of projects, including, but not limited to; building construction, parks and recreational facilities, parking lots, detention and drainage facilities, water towers, rural roadways, controlled access expressways, and bridge/structural design in; timber, concrete, steel, pre-stressed beam, pre-stressed box beam, pre-stressed U-beam, pan girder, steel plate girder, single column bent, multi-column bent, cantilevered and straddle bent, and strut & tie modeling. In addition to our broad design experience, B2Z has widespread experience with meeting, and in most cases exceeding, aggressive project schedules with short deadlines.

Through the years, our team of professionals has earned a reputation for taking a prominent role in the design and construction of public and private projects. **Whether we are working on a large/small project, we give each task the same attention to technical excellence and quality control while maintaining responsiveness.**

The B2Z business model is to develop trusted relationships by being responsive, providing top-notch customer service, and delivering reliable effective solutions to our clients in a way that minimizes construction costs and expedites construction timelines.

B2Z is very familiar with Plans, Specifications, and Estimates (PS&E) projects which typically consist of varying elements of design including grading, rigid pavement, flexible pavement, lime treated subgrade, flexible base, bridges, storm drain systems, rural drainage systems, environmental design, traffic control, traffic signals, signing, delineation, pavement markings, high mast illumination, safety lighting, embankments and retaining walls.

B2Z's staff is pre-certified in a multitude of categories and has years of experience in working on the design and plan production of highway and bridge structures, in accordance with the latest AASHTO and LRFD design manuals and TxDOT requirements. The following table shows B2Z's current TxDOT pre-certifications:

11.3.1	CONSTRUCTION SUPERINTENDENT	**23.8.1**	CLAIMS ANALYSIS AND MANAGEMENT
11.4.1	ENVIRONMENTAL INSPECTIONS	**23.13.1**	PROJECT OFFICE OPERATIONS
11.5.1	CONSTRUCTION SCHEDULING PROJECT MANAGER		

Meeting Timeline Requirements & Staffing

We have staff available to begin work immediately for any size project (part-time or full-time). On all B2Z projects, we are cognizant that maintaining a predictable project schedule is paramount to successful project delivery. The B2Z team prides itself on meeting, and often exceeding the schedules developed by our clients and project owners. We have developed a system for project schedule monitoring that has proven itself on over $1B worth of construction contracts. As a function of our proven system, we develop a schedule early in the process to ensure that we have the appropriate staffing levels assigned to the critical path components. This schedule is developed in conjunction with both the client and any other project stakeholders with consideration of the major project milestones and anticipated project hurdles. **B2Z has committed the services of experienced personnel who know and understand the tasks required to perform municipal projects.** This will undoubtedly allow us to keep ahead of schedule and add additional resources as appropriate. A few examples of our previous successes in this arena are as follows:

- B2Z was contracted to provide engineering services that included a feasibility study and design of a 46-foot-wide (overall width), 1,450-foot-long proposed bridge consisting of Tx62 prestressed girders to replace an existing lower deck truss bridge and approaches at SH 174 over the Brazos River in Hill County. **Due to fast-track negotiations with the TxDOT Waco District, B2Z was able to exceed the project schedule on a Cat 6a Bridge Replacement project that was programmed for letting in FY 2022 and position the project to receive funding in FY2019.** We worked with the FHWA and TxDOT to facilitate concurrent reviews and expedited our response time for all comments they had. This accelerated schedule was needed because the structure was considered structurally deficient, and as such we (and the client) felt it prudent to replace it as early as possible to ensure the safety of the traveling public.
- B2Z was contracted to provide engineering services that included design for SH 6 over Lake Waco and FM 116 at SH 9 overpass next to Fort Hood. Due to the impending expiration of project funds, B2Z met an aggressive accelerated 6-month design schedule for approach roadway work and two (2) independent bridge replacement projects for TxDOT. Since project funding was set to expire if these deadlines were not met, we developed a Plan of Action which included additional staffing and around-the-clock work to complete the PS&E package. We

ultimately **finished the project two (2) weeks ahead of schedule and the quality of deliverables was to the client's satisfaction.**

- B2Z encountered numerous redesigns during the construction phase services on the SH 31 project in Waco. Most redesigns resulted from streamlining construction phasing agreed to by the Contractor and TxDOT. Temporary shoring, temporary drainage, adjustments to inlet or storm sewer locations, and salvaging existing drainage all required redesign but did not impact construction milestone completion dates or budget. B2Z proposed multiple solutions and conducted a cost/benefit analysis to select the best solution. As the Engineering Firm of Record, we met with the contractor weekly to make rapid changes to the traffic control plan (TCP) to mitigate traffic issues due to weather. As a result of rapid TCP adjustments, **the Contractor earned all early finish bonuses and opened the freeway six (6) months early and the project remained on budget.**

B2Z FIRM CERTIFICATIONS

Texas Historically Underutilized Business (HUB) Certificate

HUB
Statewide Historically Underutilized Business Program

Certificate/VID Number: 1371580878100
Approval Date: August 19, 2021
Scheduled Expiration Date: August 19, 2025

The Texas Comptroller of Public Accounts (CPA), hereby certifies that

B2Z Engineering, LLC

has successfully met the established requirements of the State of Texas Historically Underutilized Business (HUB) Program to be recognized as a HUB. This certificate printed **August 19, 2021**, supersedes any registration and certificate previously issued by the HUB Program. If there are any changes regarding the information (i.e., business structure, ownership, day to day management, operational control, business location) provided in the submission of the business; application for registration/certification as a HUB, you must immediately (within 30 days of such changes) notify the HUB Program in writing. The CPA reserves the right to conduct a compliance review at any time to confirm HUB eligibility. HUB certification may be suspended or revoked upon findings of ineligibility.

Statewide HUB Program
Statewide Procurement Division

Note: In order for State agencies and institutions of higher education (universities) to be credited for utilizing this business as a HUB, they must award payment under the Certificate/VID Number identified above. Agencies, universities and prime contractors are encouraged to verify the company's HUB certification prior to issuing a notice of award by accessing the Internet (**https://mycpa.cpa.state.tx.us/tpasscmblsearch/index.jsp**) or by contacting the HUB Program at **512-463-5872** or toll-free in Texas at **1-888-863-5881**.

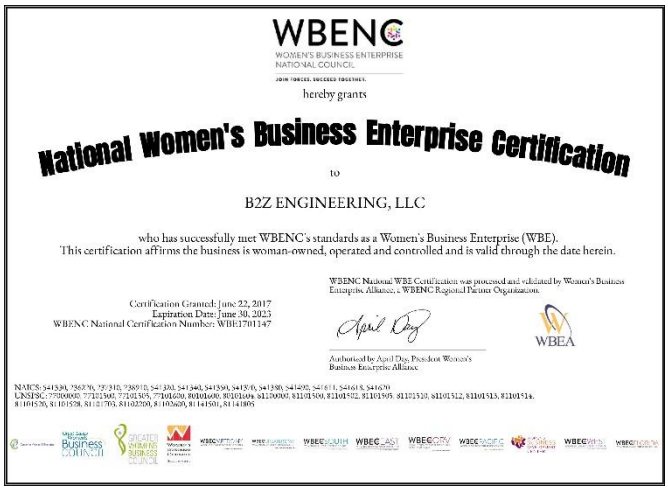
HUB Certified Firm

Texas Department of Transportation

Texas Unified Certification Program

Disadvantaged Business Enterprise Program

This certifies that the following listed firm is certified as a **DBE** in accordance with Federal Regulations 49 CFR, Part 26



B2Z ENGINEERING, LLC (VN 23626)

This Certificate is subject to suspension or revocation, and DBE information verification annually, upon the anniversary month.

Current certification information will be listed in the TUCP Directory. The TUCP Directory website is www.txdot.gov

Tamela C. Saldana, Ph.D., Director
DBE & SBE Programs
Office of Civil Rights

DBE Certified Firm

WBENC
WOMEN'S BUSINESS ENTERPRISE NATIONAL COUNCIL

hereby grants

National Women's Business Enterprise Certification

to

B2Z ENGINEERING, LLC

who has successfully met WBENC's standards as a Women's Business Enterprise (WBE).
This certification affirms the business is woman-owned, operated and controlled and is valid through the date herein.

Certification Granted: June 22, 2017
Expiration Date: June 30, 2023
WBENC National Certification Number: WBE1701147

WBENC National WBE Certification was processed and validated by Women's Business Enterprise Alliance, a WBENC Regional Partner Organization.

Authorized by April Day, President Women's Business Enterprise Alliance

WBEA

B2Z Projects

B2Z is currently providing professional engineering services on the City of Edinburg's Schunior Road Improvement Project. We are well versed in how the City likes to conduct its business. B2Z has provided professional engineering services to governmental agencies throughout the State of Texas including, but not limited to, the City of McAllen, the City of Mission, Hidalgo County, Hidalgo County Drainage District No. 1, and the Texas Department of Transportation (TxDOT). Below is a listing of recent projects completed or currently in process.

Schunior Road Improvements – Widening, Sidewalks, Bridge Replacement, ROW Acquisition

Client: City of Edinburg

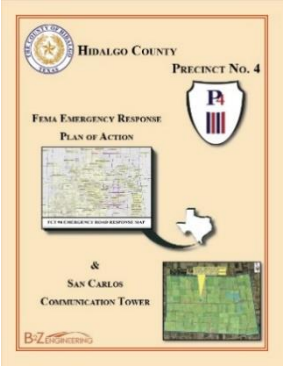
Contact: Mr. Mardoqueo Hinojosa, P.E., CFM – Ph. (956) 388-8211

Description/Scope: B2Z was contracted by the City of Edinburg to develop schematic alternatives & PS&E for roadway and drainage improvements to Schunior Rd. from Closner Road to McColl Road This project is 2.5 miles in length and ROW varies from 40ft to 100ft throughout. The City had included this project in its 2018 roadway bond issuance proposing to widen it to 4 lanes, improve the deteriorated Rail Road Crossing, add sidewalks due to its proximity to UTRGV, replace and/or widen a prestressed box beam bridge over a drainage ditch, and warrant traffic signals at Jackson Rd. and McColl Rd. Construction documents include typical sections, estimated quantities, traffic control plan, removal plan, roadway plan and profile, utility plan, EPIC, SW3P, and earthwork cross-sections.

Mile 17 ½ from Depot Road East to Mon Mack Road

Client: Hidalgo County Precinct No. 4

Contact: Honorable Commissioner Ellie Torres – Ph. (956) 383-3112



Description/Scope: B2Z worked with the City of McAllen to develop an interlocal agreement between the City and Hidalgo County Precinct No. 4 for the Mile 17 ½ project. B2Z was contracted by Hidalgo County Precinct 4 to provide schematic, PS&E, pavement design, hydrologic studies, environmental services, public involvement, utility coordination services, uncontrolled mapping, and office surveys.

Emergency Response Plan of Action & San Carlos Communication Tower Mapping

Client: Hidalgo County Precinct 4

Contact: Honorable Joseph Palacios – Ph. (956) 383-3112

Description/Scope: B2Z was contracted by Hidalgo County to perform feasibility studies including preliminary design values, uncontrolled mapping, and preliminary ROW. Exhibits were generated for 72 locations within the precinct that were damaged due to flooding. These exhibits included city limits, county jurisdiction, on/off system roads, damaged limits, and construction cost estimates. Overall exhibits highlighting the adversely impacted areas within the precinct were developed.

Project Specific Emergency Response Engineering Analysis

Client: Hidalgo County Precinct No. 4

Contact: Honorable Joseph Palacios – Ph. (956) 383-3112

Description/Scope: B2Z was contracted to provide professional engineering services to Hidalgo County Precinct No. 4 for the emergency response engineering analysis of 18 locations through the precinct jurisdiction. The analysis included establishing basic design concepts, project controls and a general scope for the project, as well as creating overall project exhibits highlighting the impacted areas overlayed on Aerial Imagery, developing drainage area maps, project location maps, floodplain and outfall maps and digital elevation maps. This contract and task order are 100% complete.

Brushline Road – PS&E, Hidalgo County, Texas

Client: Hidalgo County Precinct 4

Contact: Hon. Joseph Palacios – Ph. (956) 383-3112

Description/Scope: B2Z was contracted to provide professional engineering services to Hidalgo County Precinct No. 4 for the needed roadway improvements to Brushline Road from FM 490 to SH 186. This project was 1.2 miles long which scope of work included feasibility studies, and roadway design controls (geometric design, general guidelines for project development, grading design, and pavement design), drainage mapping, signings, markings and signalization, as well as traffic control planning.

Tower Road, Cesar Chavez Road, and San Juan Road Bridge Repairs

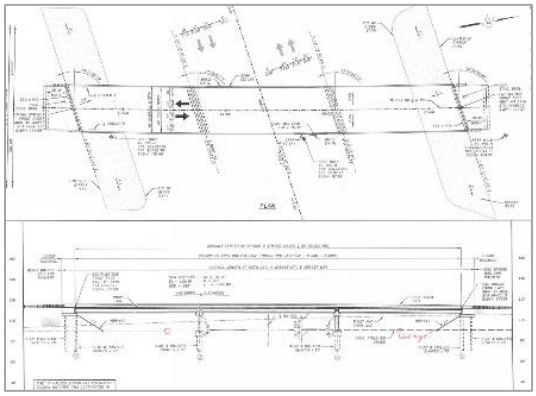
Client: Hidalgo County Precinct No. 2

Contact: Honorable Commissioner Eduardo "Eddie" Cantu – Ph. (956) 787-1891

Description/Scope: B2Z was contracted by Hidalgo County Precinct 2 to develop full PS&E for the roadway and bridge improvements for the off-system bridge replacements at Tower Rd, Cesar Chavez Rd., San Juan Rd, and a bridge class culvert at Highline Rd. all crossing the South Floodwater Channel. These projects included structural analysis, geotechnical engineering, and bridge design. Construction documents include roadway and bridge typical sections, bridge layouts, abutment details, span sheets, and interior bent details.

Regional Linear Park Project

Client: Hidalgo County Precinct No. 2



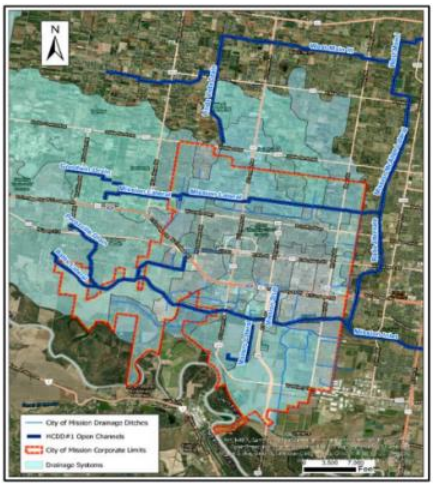
Contact: Honorable Commissioner Eduardo "Eddie" Cantu – Ph. (956) 787-1891

Description/Scope: B2Z was contracted to provide professional engineering services to Hidalgo County Precinct No. 2 for the Regional Linear Park Project. The scope of work provided included feasibility studies, environmental assessment reviews, public involvement coordination, schematic design, PS&E, landscaping and irrigation layouts. B2Z assisted in the completion of the PS&E for the project as well as created all landscaping and irrigation layouts.

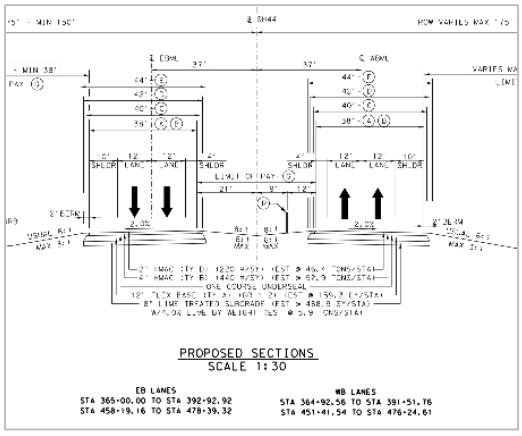
SH 365 Bridge Layout Development & Design Detailing at USIBWC Floodway

Client: Hidalgo County Regional Mobility Authority (HCRMA)

Contact: Mr. Pilar Rodriguez, P.E., Executive Director – Ph. (956) 402-4762



Description/Scope: B2Z was contracted to develop the bridge layout for the SH 365 Mainlanes Bridge over the USIBWC Main Floodway (consisting of an approx. 3,500 ft long by 56 ft wide Ph. I and 118 ft wide Ph. II - including portion over 23rd St., Tx-Girder bridge with concrete deck on rectangular caps and circular columns founded on drilled shafts). The bridge layout incorporated a proposed levee realignment of the north main floodway levee bank. Additionally, B2Z was tasked with development of Bridge Layouts for 3 connecting bridges including SH 365 Mainlanes over 23rd St (SP 115), SH 365 On & Off Ramp to SP 115 (same structure type as mainlanes noted - 850 ft long by 26 to 33 ft wide).



City of Mission City-Wide Drainage Projects Design Management

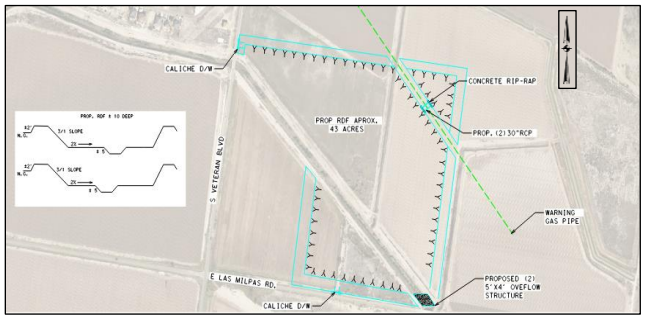
Client: City of Mission

Contact: Mr. Juan Pablo 'JP' Terrazas, P.E, Assistant City Manager – Ph. (956) 585-3275

Description/Scope: B2Z Engineering is currently serving the City of Mission as the City's project managers for the design & construction management of 7 city-wide drainage projects. This program is currently in the design phase. The B2Z team is providing design management and oversight of seven design engineers of records that were retained by the City to upgrade the drainage systems around the City. In this phase, B2Z is tasked with ensuring each project is being designed in a manner that meets constructability and specification standards, as well as enforcing schedule adherence by each engineer of record. B2Z is also providing the City with Construction Management & Inspection Services and Construction Materials Testing for the 7 drainage projects.

SH 44 PS&E / Corpus Christi, TX

Client: L&G Engineering



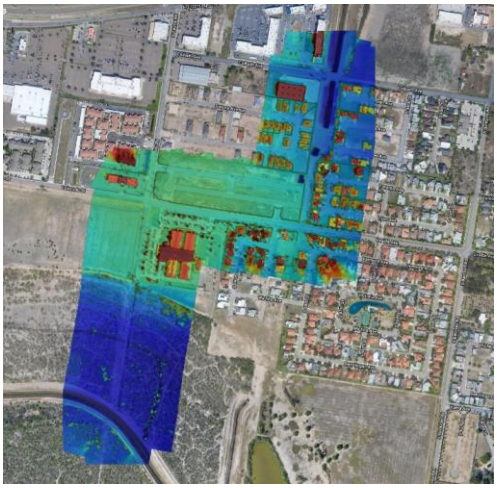
Contact: Mr. Jorge Madrigal – Ph. (956) 585-1909

Description/Scope: B2Z was contracted by L&G Engineering to provide bridge design and PS&E services to TxDOT for 3 pairs of twin bridges on SH 44 outside of Corpus Christi. The design consists of 6 TX-Girder bridges with concrete deck on rectangular caps. The 2 twin bridge overpasses that cross CR 61 and SH 24 have circular columns founded on drilled shafts. The twin bridge at OSO creek has a 60-degree bent skew and is founded on prestressed concrete piles.

South Lateral Drain 43 AC Regional Detention Facility

Client: Hidalgo County Drainage District No. 1

Contact: Mr. Raul Sesin, P.E., CFM, District Manager – Ph. (956) 292-7080

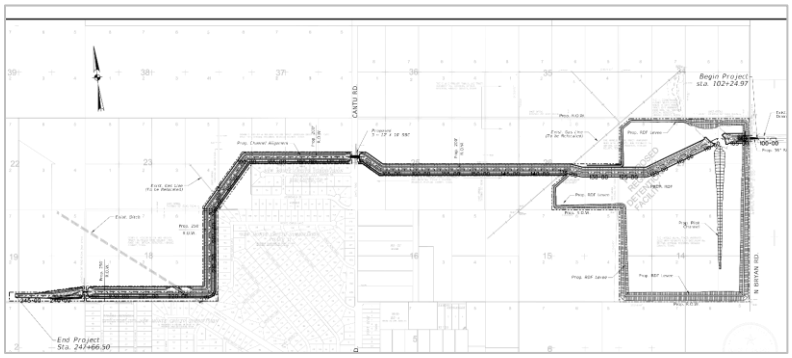


Description/Scope: B2Z was contracted by Hidalgo County Drainage District No. 1 to provide project development services and full Plans, Specifications, and Estimates (PS&E) for a proposed 43 AC Regional Detention Facility (RDF) adjacent to the South Lateral Drain east of Veterans Road. The proposed RDF is 10 feet deep and has two overflow structures, which will help alleviate heavy flooding for the project area. B2Z is also preparing a Hydrologic and Hydraulic report to model the RDF's benefits for the area. The report consists of a 2D unsteady flow HEC-RAS model, showing the flooding extents for existing and proposed conditions along the RDF, for different storm events. This project is still in the design phase, the Engineer Construction Estimate is $3.4M.

2018 Drainage Bond Project #25: Mission McAllen Rado Alternate Phases I & II

Client: Hidalgo County Drainage District No. 1

Contact: Mr. Raul Sesin, P.E., CFM, District Manager – Ph. (956) 292-7080



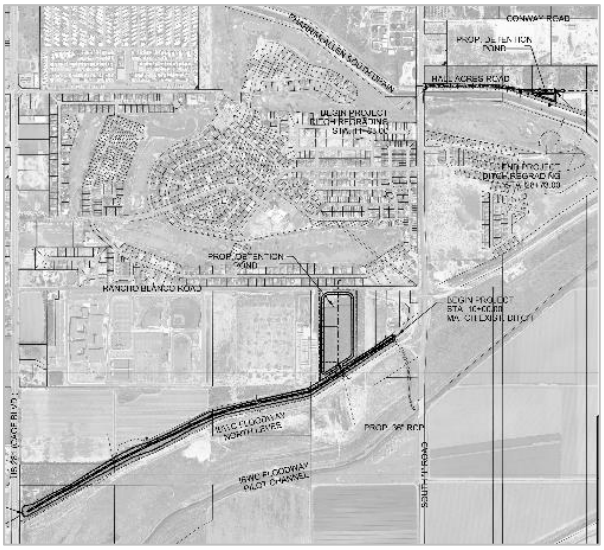
Description/Scope: B2Z was contracted by Hidalgo County Drainage District No. 1 to minimize the threat of flooding in Precinct 2 by upgrading the existing Rado Drain that outfalls into the Mission Inlet. The project includes analyzing and developing existing and proposed hydrologic conditions using HEC-HMS and hydraulic models using HEC-RAS. Several alternatives have been analyzed to optimize the most cost-effective solution. B2Z is using these models to design a new drainage structure (3,600 LF of new location 10' x 8' box culvert) that will add enough capacity to accommodate a 50-year storm event. B2Z is also preparing an engineering report, schematic, roadway reconstruction PS&E, and drainage PS&E for this project. Phases I & II are currently under construction.

2018 Drainage Bond Project #27: Monte Cristo Road & Conway Road

Client: Hidalgo County Drainage District No. 1

Contact: Mr. Raul Sesin, P.E., CFM, District Manager – Ph. (956) 292-7080

Description/Scope: B2Z was contracted by Hidalgo County Drainage District No. 1 to design culvert and channel improvements for the Monte Cristo & Conway Drain. The services being provided include but are not limited to data collection, geographic information systems, hydrologic analysis, hydraulic analysis, hydrologic and floodplain mapping, channel/drainage design, roadway design, plans, specifications and estimates, field surveying and photogrammetry. B2Z is designing a new drainage system to include a 90-acre regional detention facility. The new channel will consist of 140ft to 240ft of ditch right-of-way. After conducting survey and field investigations, B2Z identified a low-lying area to create the proposed 90-acre basin (Regional Detention Facility). B2Z proposed an alternate design to be the first



of its kind in the Rio Grande Valley. This design would include higher banks (instead of costly excavation) to retain water on site. A 48" RCP bleeder line would connect to the outfall drain. B2Z performed a 2D Unsteady Flow Model using HEC-RAS to show the flooding extents before and after improvements.

2018 Drainage Bond Project #33: South I Road Detention Phases I & II

Client: Hidalgo County Drainage District No. 1

Contact: Mr. Raul Sesin, P.E., CFM, District Manager – Ph. (956) 292-7080

Description/Scope: B2Z was contracted by Hidalgo County Drainage District No. 1 to provide Plans, Specifications, and Estimate (PS&E) for the South I Rd Detention project. This project is broken up into two segments, where segment one's limits are on Javalina Dr. from Cage Blvd (Bus. 281) to S I Rd. Segment two's limits are on Hall Acres Rd. from S I Rd to 0.35 miles west. On segment one, B2Z was tasked with improving the drainage adjacent to the north floodway to provide relief to a historically recorded flood-prone area. Drainage improvements for this segment include upgrading a drainage ditch that runs the length of the limits and a detention pond that bleeds into a permanent pump structure at the top of the north International Boundary & Water Commission (IBWC) Floodway levee. B2Z was responsible for designing the permanent pump structure and ensuring that it was IBWC approved. On segment two, B2Z was tasked with improving the drainage in the area and design a pump structure to discharge the collected water into an adjacent HCDD1 drain ditch. B2Z's design for this segment includes improving the roadside ditches, ensuring a positive flow to a detention pond at the end of the project. B2Z also designed a pump platform to hold the pump structure as well as provide specifications to HCDD1 for the appropriately sized submersible pump. This design will accommodate a 100-year storm event.

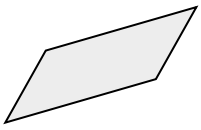
Our Services

As shown through our past project experience, B2Z is highly qualified to provide superior professional engineering services to the City of Edinburg. B2Z would like the City to **continue** to view our firm as an extension of its staff, utilizing our expertise whenever necessary. We understand the City of Edinburg is seeking to retain a rotation list of qualified professional engineering firms to provide the following services:

- Field investigation and data collection.
- Feasibility evaluation and alternatives analysis.
- Design Development and cost estimating.
- Preparation of plans, specifications, and estimates (PS&E).
- Review and check plans, subdivision and parcel maps, and computations submitted by private developers.
- Review of engineering and encrouchment permits.
- Prepare environmental reports.
- Review of environmental and engineering reports and proposals.
- Coordination with utility agencies, consultants, and other public agencies.
- Organization, participation and presentations at meetings held by City staff, the City Council, neighborhood groups, and other stakeholders.
- Preparation of preliminary documents, plans and/or reports including findings and recommendations.
- Preparation final documnets, plans and.or reports responding to City and other stakeholder comments.
- Preparation of handouts and graphical displays for public meetings.
- Management and monitoring of capital improvement projects.
- Management and monitoring of planning projects.
- Administration and monitoring of regional, state, and federal grants.
- General civil engineering support services as assigned.

For the purposes of this statement of qualification, we would like to elaborate on typical procedures for providing Preliminary Engineering & Plans, Specifications, and Estimates (PS&E) Services.

Part 1 – Pre-Design: Development of Design Criteria & Laying the Groundwork



The first steps in designing civil/transportation projects are: creating (or adopting) specifications and design criteria (typically based on the project funding source), identifying constraints and/or areas of concern, establishing design parameters, and developing a project schedule through a Design Concept Conference (DCC). The DCC meeting is intended to discuss items such as: pavement design, hydraulic design, typical sections, horizontal & vertical alignments, design speed, ROW widths, impacts to local and state roads, overpass and ramp locations, utility coordination, bridge structures, etc. The next step in project development is laying the groundwork for the project including ROW Surveys & Mapping, Route and Design Studies & Schematic Design, and Utility Location & Coordination.

Design Surveys

Design surveying is the collection of field data to establish the spatial relationship of existing features required by the engineer for the development of the proposed improvements. Requirements for data will change based on needed scope of work.

ROW Surveys & Mapping

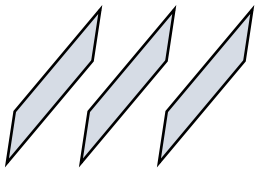
Right-of-Way (ROW) mapping is a boundary survey of parcels of land to be acquired for proposed project purposes. The ROW map, parcel plats and property descriptions must be prepared under the supervision of an RPLS. We work with the RPLS to ensure ROW mapping delineates all fee title and easement interests.

Route Studies & General Schematic

Route Studies are conducted in coordination with survey, ROW, and utility locates to determine optimal path of least resistance for design. These studies are utilized to develop a design that avoids high impacts on the ROW or areas of environmental concern; helping to keep the project on schedule. Lastly, the preliminary schematic is generated and typically submitted to resource agencies and approval authorities for approval prior to PS&E.

Utility Location & Coordination

Utility adjustments are frequently required for civil projects. The coordination process consists of initial project advisory letters, exposure letters, follow-up letters, and final adjustment letters. Compensable utilities are handled by the Compensable Utility Process as required by the TxDOT Utility Accommodation Policy. Final utility adjustment packages include all impacted compensable and non-compensable utilities.



Part 2 – Design the Project (PS&E)

The design phase of the project is where everything starts coming together. Thoroughly developing, reviewing, and modifying all plans, specifications, and estimates is crucial for every successful project. It is of the utmost importance that the management of the preliminary engineering phase (Part 1) is carefully and delicately executed. The final product is only as good as the preliminary information gathered. The following is a highlight of the main components of the design process.

Roadway Design

- Horizontal Alignments and Vertical Profiles
- Plan & Profile Sheets (Geometry of Project)
- Intersection Layouts and Roadway Data Sheets
- Removal Layouts (In Areas of Existing Infrastructure)
- Design of Geometric Cross Sections

B2Z will determine the optimal alignment and vertical profile using roadway design software such as GEOPAK. Once the alignment and profile are set, design cross-sections are analyzed to determine ROW needs and costs associated with earthwork quantities. B2Z will adhere to the guidelines and specifications as outlined in the latest TxDOT Roadway Design Manual and/or local government standards & manuals.

Traffic Control Plan (TCP) & Design

This includes the construction phasing of traffic including TCP layouts, TCP typical sections and design of traffic-related items such as signals, signing, and striping.

- **TCP**: B2Z will ensure all requirements of the Texas Manual on Uniform Traffic Control Devises (TMUTCD) will be followed.
- **Signing**: B2Z will show small & large signs on plan layouts.
- **Striping**: B2Z will prepare pavement marking layouts including pavement markings, delineation, raised pavement markers, and object markers. Compliance with ADA standards for accessible design will be verified on all pedestrian facilities.
- **Signalization**: B2Z will verify signal warrants and will design signalized intersections based on existing and projected traffic volumes and proposed traffic analyses.

Structural Design (Bridges & Miscellaneous Structures)

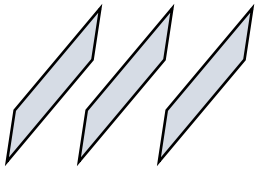
- Bridge Layouts
- Typical Sections
- Foundation Layout
- EQ & Bearing Seat Elevations
- Abutment & Bent Sheets
- Column Details
- Span Sheets
- Beam Layouts
- Miscellaneous Details
- Aesthetic Treatments

B2Z has completed a multitude of projects on various bridge types including typical overpasses and underpasses, small waterway crossings (drainage ditches and irrigation canals), medium to large waterway crossings (floodways), combination overpasses (roadways combined with railroads/other), and direct connectors/flyovers. B2Z has many years of experience in designing structures with the latest AASHTO LRFD Bridge Design specifications and TxDOT Bridge Design manuals. We utilize TxDOT design programs such as Bridge Geometry System (BGS), Pre-stressed Concrete Beam Design/Analysis Programs (PSTRS 14 & PGSuper), Bent Cap Analysis Program (CAP 18), and Foundation Design/Analysis Program (WINCORE). In addition, we continue to implement design techniques such as finite-element modeling using RISA-3D and other software programs to analyze complicated transportation structures ensuring the most precise analysis and the most efficient structural designs.

Drainage Design

- **Hydrology** – Study of Drainage Area (Watershed)
- **Hydraulics** – Design of Ditches, Outfalls, Culverts, and Other Stormwater Control Devices to Effectively Control Water
- Drainage Area Maps
- Hydrologic Computation Sheets
- Utilties & Drainage (U&D) Sheets

ESRI ArcGIS Pro will be utilized to facilitate various spatial data processes required for the hydrologic model development including topographic data development, watershed delineation, and hydrologic parameter extraction. A project Digital Elevation Map (DEM) will be developed using Light Detection and Radar (LiDAR) data and supplemented by field survey. ArcGIS extensions such as ArcHydro have the capability to process DEM datasets for automated watershed delineations and create input files for use in hydrologic modeling. Existing land use data will be estimated from current aerial photography and Hidalgo County parcel maps. US Army Corps of Engineers' HEC-HMS software will be used for computing peak flows and generating hydrographs for further use in hydraulic evaluations of channels and crossings. A frequency based hypothetical storm method referenced from NOAA's Precipitation Frequency Data Server for Atlas 14 will be inputted. NRCS Unit Hydrograph transformation method and NRCS Curve Number loss rate method will both be used to estimate runoff. Peak flows will be calculated for different storm events, for both existing and proposed conditions.



Environmental Services

If work being performed requires any environmental permitting or inspections prior to, or during construction, the B2Z team can provide all services related to this task. Furthermore, if any State or Federal funding will be utilized, requiring the need for environmental studies following the NEPA process, the team is ready to provide said services.

Drainage Design continued

A hydraulic model for channels and crossings will be evaluated using the US Army Corps of Engineers' HEC-RAS software. RAS Mapper will be utilized to prepare geometric data from GIS for import into HEC-RAS, such as the terrain model. Field survey of the channels and crossings will be integrated into the geometric data. Peak flow data determined by the HEC-HMS model will be entered as boundary conditions for the HEC-RAS model. Existing and proposed conditions water surface elevations will be evaluated for the design storm event.

For stormwater drainage systems, B2Z uses GEOPAK Drainage for analysis and design. B2Z will consider the overall watershed and any future additions of the system. HY-8 may also be used for proposed drainage culvert analysis. Depending on the drainage area size, Rational Method will be used to size side ditches in rural projects.

Geotechnical Engineering

Geotechnical Field and Lab

B2Z has 3 drilling rigs, 3 drilling support vehicles, and 5 full-service Geotechnical and Construction Material Testing Laboratories (including 2 mobile labs).

Geotechnical Engineering Analysis

B2Z provides Soil Survey Models, Shear Strength Profile Development, Scour Analysis, Foundation Analysis/Design, Earth Structure and Global Stability Analysis, Settlement Analysis, Retention Systems Analysis, Soil Stabilization, Pavement Design (Flexible/Rigid Pavement), RW Design, TSS (Shoring) Design, etc.

Part 3 – Finalize PS&E Package and Prepare Submittal Documents (Bid Package)

After completion of all Design Tasks, B2Z will compile all documentation into a Plan, Specifications and Estimates package including but not limited to: Final Set of Design Plan Sheets – Construction Drawings (mylar or paper copies), Final Project and Construction Specifications, Final Quantities, Engineer's Construction Estimate (and Estimate of Construction Time), Design Documentation Forms and Design Bid Forms (specific to the city). B2Z is also well-versed in the bid process and can assist the City of Edinburg with this task if requested.

Quality Assurance / Quality Control (QA/QC)

The B2Z team understands the importance of QA/QC and is familiar with the frustrations of poor QA/QC practices. The B2Z team is not just aware but committed to minimizing the review and oversight required by the Client through the implementation of an internally developed QA/QC process.

Quality Assurance is defined as an overall management plan to guarantee the integrity of the product, while **Quality Control** is defined as the series of analytical measurements used to assess the quality of the product. The goal of quality assurance and quality control (QA/QC) is to identify and implement data collection and analytical methodologies that limit the introduction of error. The B2Z team will ensure the implementation of a Project QA/QC Program, which will be the blueprint for identifying how the quality system of the organization will be performing the work for each task:

Step 1 - Project Management and Organization.
Planning and scoping processes that will assist the team performance, production quality and timeliness of results. This step is important since it creates the foundation and boundaries for teamwork. All the objectives for this project will be evaluated and agreed upon by all members of the team/client; the planning meetings and progress reports will determine the success of the tasks.

Step 2 - Data Generation and Collection.
Operations need to be planned and the data collected needs to be reviewed to ensure the information being utilized by the team is reliable and of good quality. If the data integrity is compromised; the results obtained will undoubtedly be erroneous regardless of the amount of effort and consistency of the team's work.

Step 3 - Assessment and Oversight. Consistent monitoring throughout the life of the project will be achieved by setting up a project schedule chart depicting the timetables and responsibilities of each team member. There will be continuous regular meetings to assess the flow of information, data collected, status of work and to assure the quality of work is being preserved. The Project Manager will be in constant communication and coordination with each one of the team members to provide necessary flow of information. The Client's Program Manager will be kept abreast of every detail.

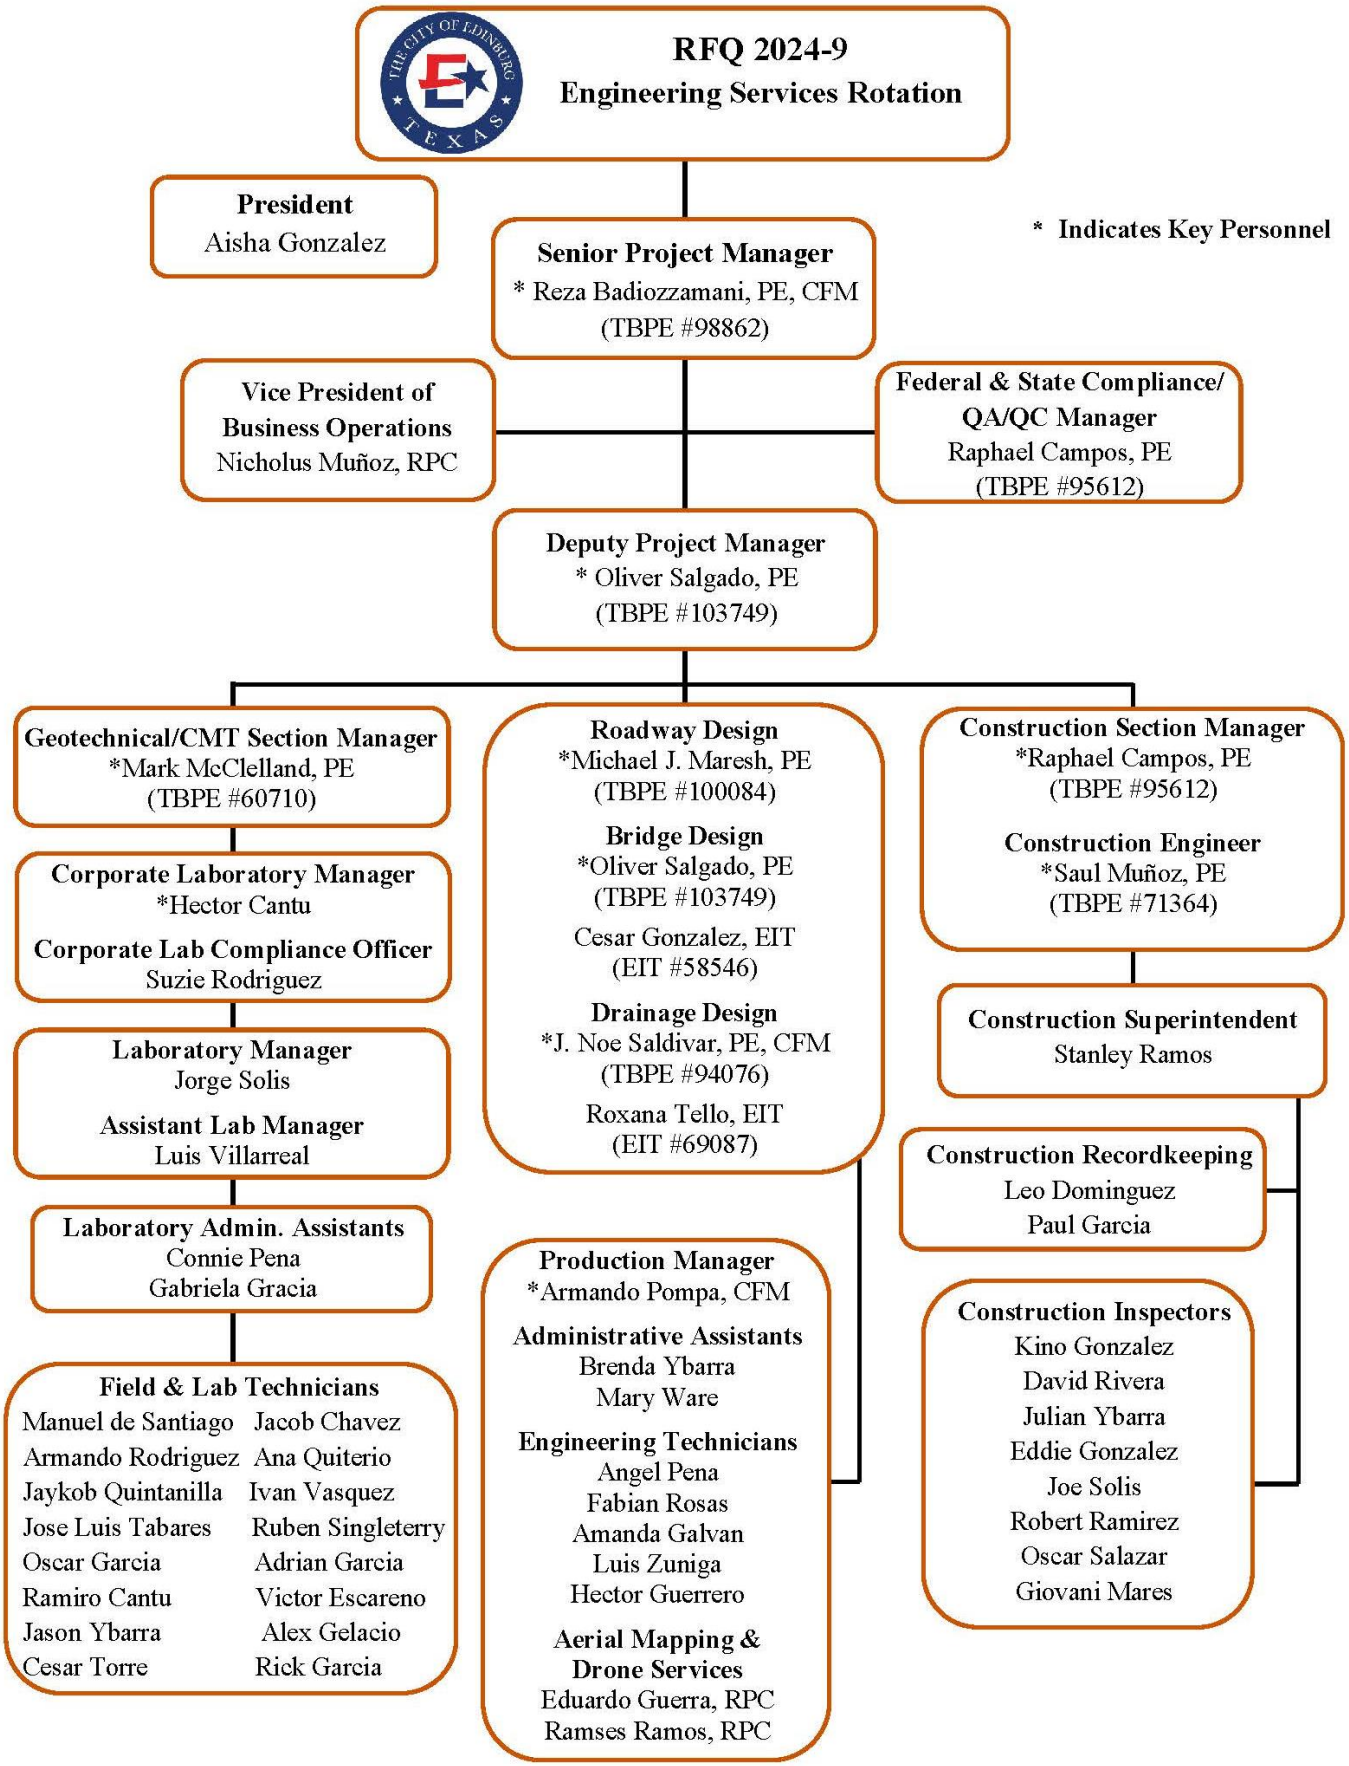
Step 4 - Project Validation and Product Delivery. Quality review will be audited at various stages of the project. Internal audit target dates have been established at 30%, 60%, and 90% completion of each. Team leaders will be given a checklist of the product completeness expected. Independent peer review will be implemented prior to submitting any information to the Project Manager (PM). A thorough review by the PM and QA/QC Manager will be required prior to submitting any information to the Client's Contract Manager. All contact and flow of information for this project will be done directly by the Project Manager to the Client's Program Manager and/or Board of Directors.

Step 5 - Approval of the QA/QC. Prior to implementing this plan, schedules, meeting times, places, data collection techniques, etc. will be presented to the Client's Program Manager for review and approval. All meetings with stakeholders and local entities will be organized, documented, and provided to all people involved in the project.

Tab III – Team Member Qualifications and Experience

Team Member Qualifications and Experience

B2Z and its team members hold themselves to the highest level of both personal and professional integrity and only undertake tasks in which they can perform competently and expertly. This ethical standard has resulted in B2Z not being party to a lawsuit since its inception in 2009, nor has a claim been made against its errors and omissions insurance policy. Furthermore, all B2Z personnel follow the National Society of Professional Engineer's (NSPE) code of ethics six fundamental canons.



NSPE NATIONAL SOCIETY OF PROFESSIONAL ENGINEERS

- Hold paramount the safety, health, and welfare of the public.
- Perform services only in areas of competence.
- Issue public statements only in an objective and truthful manner.
- Act for each employer or client as faithful agents or trustees.
- Avoid deceptive acts.
- Conduct themselves honorably, responsibly, ethically, and lawfully so as to enhance the honor reputation, and usefulness of the profession.

B2Z's staff is comprised of highly skilled individuals possessing **extensive knowledge and expertise** in civil engineering, structural/bridge engineering, pavement/roadway design, drainage analysis and design, geotechnical engineering, and construction engineering (please refer to page 22 for an illustration of our organizational chart).

Mr. Reza Badiozzmani, PE, CFM, will serve as the **Senior Project Manager.** He brings *over 22 years* of experience in Civil Engineering, with an emphasis on Program and Project Management. **Mr. Oliver Salgado, PE,** will serve as the **Deputy Project Manager and Bridge Design Engineer.** He brings *over 22 years* of experience managing the delivery of Plans, Specifications, and Estimates (PS&E) for various complex bridge structures and roadway projects. **Mr. Mark McClelland, PE,** will serve as the **Geotechnical/CMT Section Manager**, bringing *over 40 years* of geotechnical engineering and testing experience. **Mr. Michael Maresh, PE,** will serve as the **Roadway Design Engineer.** He brings *over 21 years* of transportation engineering experience in urban and rural roadway design. **Mr. J. Noe Saldivar, PE, CFM,** will serve as the **Drainage Analysis/Design Engineer**, bringing *over 26 years* of progressive experience in transportation and drainage planning and design. **Mr. Raphael Campos, PE,** will serve as **QA/QC & Construction Section Manager**, bringing *over 23 years* of experience in the field of engineering. **Mr. Saul Muñoz, PE,** will serve as the **Construction Engineer.** He brings *over 40 years* of experience – with 25 years at TxDOT managing PS&E design, road/bridge construction, contract administration, project letting, project management, and final project acceptance. **Mr. Armando Pompa, CFM,** is B2Z's **Production Manager,** bringing *over 18 years* of experience in the infrastructure industry. He oversees the civil infrastructure department by assisting the project engineering team (Task Leads) with plan production and design input. Mr. Pompa also oversees the GIS department with over 12 years of experience as a GIS analyst. *Resumes with biographic summaries and project experience are provided on page 23 of this submittal.*

B2Z's Organizational Chart

Reza Badiozzamani, PE, CFM

Summary

Mr. Badiozzamani functions as B2Z's Senior Project Manager. Mr. Badiozzamani is responsible for all engineering, geotechnical and construction material testing laboratory projects in addition to managing various aspects of the engineering laboratory division. His duties also include overseeing personnel during the development and subsequent completion of the B2Z projects and providing QC/QA for all laboratory testing procedures (verifying laboratory compliance with ASTM, AASHTO, ACI, and TxDOT testing requirements as specified by the project). Mr. Badiozzamani is responsible for the review of all Commercial and Governmental Construction Material Testing Reports produced by B2Z Engineering. Additionally, Mr. Badiozzamani assists the Geotechnical Engineer with the development and analyses of Geotechnical Studies and Recommendations for various clients. Mr. Badiozzamani has a wealth of hands-on experience in Soil Classification, Soil Testing, Soil Specialty Testing (Vane-Shear, Unconfined Compression, One-Dimensional Consolidation), and Concrete Field and Laboratory Testing.

8.1.1	12.5.1	

Relevant Project Experience

Hidalgo County Outerloop Masterplanning Effort, Hidalgo County RMA

Mr. Badiozzamani was the lead engineer for over 60 professionals working on the master planning of over 130 miles of the new location Hidalgo County Outer loop project. This project consisted of over 12 different public open houses strategically held throughout the county to inform the affected stakeholders of the proposed facilities. Mr. Badiozzamani represented Hidalgo County RMA before the TxDOT Commission and ran point on the successful application of securing over $112M to the project. Mr. Badiozzamani made various presentations to Hidalgo County Commissioners Court as to the status of the project and worked with the Hidalgo County MPO to have the adopted alignments included in the Hidalgo County Therefore Plan for the protection of the ROW.

Mission Inlet Recertification Project, Hidalgo County Drainage District No. 1

Mr. Badiozzamani was responsible for all public involvement and outreach with affected stakeholders. He worked as the liaison between Hidalgo County Drainage District No. 1 (HCDD1) and FEMA/IBWC for the needed recertification and remapping efforts for Hidalgo County. Mr. Badiozzamani made multiple presentations to the Cities of Mission & McAllen on behalf of HCDD1 and managed the various aspects needed for implementation of the remapping effort.

Madero International Bridge Presidential Permit, City of Mission

Mr. Badiozzamani worked with the City of Mission and their Mexican counterpart to perform a "feasibility study" for a new international bridge crossing across the Rio Grande. This coordination included outreach with the state department as well as the state of Tamaulipas needed for the final permitting of this new international bridge crossing.

TX-MX Border Transportation Master Plan – HDR Engineering – TxDOT

This project was a multimodal, binational transportation plan to address challenges, issues, opportunities and needs for moving goods and people across the Texas-Mexico border. Several rounds of meetings were held every 2 to 3 months including Binational Regional Steering Committee (BNRSC) meetings that included key public officials coordinating with the Border Trade Advisory Committee (BTAC) and TxDOT to help develop the master plan. Stakeholder meetings were conducted with binational public and private sector stakeholders. Public meetings were advertised and held.

Oliver F. Salgado, PE

Title
Deputy Project Manager & Bridge Design Engineer

Years of Experience
22

Years with Firm
7

Education
BS, Civil Engineering
University of Texas Austin, 2002

Training/Certifications
Professional Engineer: Texas/103749

Local Government Project Procedures Certified (LGPP)

Areas of Expertise
- Toll Plaza Design
- Bridge Design
- Foundation Design
- Pavement Design
- Program Management
- Geotechnical Testing
- Geotechnical Engineering

TxDOT Pre-certifications

3.2.1	8.1.1	14.2.1
4.2.1	10.1.1	14.3.1
5.2.1	10.2.1	14.5.1
5.3.1	12.1.3	
5.5.1	14.1.1	

Summary

Mr. Salgado has over 22 years of progressive experience in managing a wide range of diverse civil engineering projects. He has managed the delivery of plans, specifications, and estimates (PS&E) for various complex bridge structure and roadway projects as both a consultant and working for TxDOT's Bridge Division and Waco District offices. Mr. Salgado has successfully delivered several multi-disciplinary and multi-office projects demonstrating his ability to increase and sustain efficiency in large scale projects, particularly within accelerated schedule environments. Furthermore, Mr. Salgado has been Engineer of Record on several complex structures including multi-level interchanges. Mr. Salgado is proficient in all TxDOT bridge design softwares (BGS, Bridgelink, Cap18, Wincore) and 3rd party softwares (Vbent, Open Bridge, and SP column).

Relevant Bridge Project Experience

Recreational Trails Connectivity Project [Hidalgo County Precinct 2]

B2Z was contracted by Hidalgo County Precinct 2 to develop a Feasibility Study (WA#1) to determine how to connect two existing hike and bike trails in southern Hidalgo County. B2Z utilized drone technology to capture the latest existing property conditions while investigating properties along each alternative that contained special easements by Hidalgo County Drainage District #1 and USIBWC for access.

SH 6 Over Lake Waco (TxDOT Waco District)

B2Z was contracted by the Texas Department of Transportation (TxDOT) to provide engineering services for a Feasibility Study and 30% plans to replace an existing twin bridge and approaches at SH 6 over lake Waco in McLennan County. Mr. Salgado, serving as Deputy Project Manager and Task Lead (Bridge) was responsible for designing and directing preliminary plans for (3 phase, 116' wide, 14 span 3,950'), simply supported prestressed concrete TX 70 girder, rectangular bent cap bridge with an 8.5 inch reinforced concrete slab. The substructure consists of 42" diameter columns and 42" drilled shafts. Mr. Salgado directed and developed the preliminary bridge geometrics using BGS, preliminary girder design using Bridge Link and the bent design using cap 18, and SP column. (Project on Hold)

SH 31 at FM 939 and FM 2311 (TxDOT Waco District)

B2Z was contracted by the Texas Department of Transportation (TxDOT) to provide engineering PS&E services for two on-system bridges on SH 31 at the intersection of FM 939 and FM 2311. Mr. Salgado, serving as Deputy Project Manager and Task Lead (Bridge) was responsible for designing and directing the preparation of plans for FM 2311 (twin 40' wide, 3 span 70-125-70, 15 degree skew) and FM 939 (twin 40' wide, 3 span 70-127-70, 19 degree skew), simply supported prestressed concrete TX 54 girder, rectangular bent cap bridge with an 8.5 inch reinforced concrete slab. The substructure consists of 36"diameter columns and 42" drilled shafts. Mr. Salgado directed and developed the bridge geometrics using BGS, girder design using Bridge Link and the bent design using cap 18, and SP column.

SH 174 Over Lake Whitney (TxDOT Waco District)

B2Z was contracted by the Texas Department of Transportation (TxDOT) to provide engineering services for a Feasibility Study and PS&E to replace a lower deck truss bridge and approaches at SH 174 over Lake Whitney in Hill County. Mr. Salgado was responsible for designing and directing the preparation of the superstructure for (46' wide, 10 span, 1,450') simply supported prestressed concrete TX 62 girder, rectangular bent cap bridge. He directed the design of the substructure consisting of 42" and 48" columns and Drilled Shafts using V-bent and SP Column designed columns ranging from 17 ft tall to 50 ft tall.

Mark McClelland, PE

Title
Geotechnical/CMT Section Manager

Years of Experience
43 (29 with TxDOT)

Years with Firm
6

Education
BS, Civil Engineering
University of Texas Austin

Training/Certifications
Professional Engineer:
Texas/60710

Areas of Expertise
- Geotechnical Engineering
- Geotechnical Drilling & Testing
- Retaining Wall Analysis & Design
- Deep Foundation Design
- Vessel Impact Analysis & Fender System Design
- Construction Materials Testing
- Laboratory/Field Operations
- Project Management
- Construction Support
- Quality Assurance/Quality Control
- Structural Engineering
- Roadway & Bridge Design

TxDOT Pre-Certifications

5.2.1	14.2.1
5.3.1	14.3.1
10.5.1	14.4.1
14.1.1	14.5.1

Summary

Mr. McClelland has 43 years of experience (29 years directly with TxDOT) in all aspects of Geotechnical Engineering. Most of his career was spent working in, and ultimately managing, the TxDOT Bridge Division Geotechnical Branch. He oversaw the update of the Geotechnical Manual, wrote all foundation and retaining wall Standard Specifications for the 2004 Spec Book, and oversaw the development of all current foundation and retaining wall design processes currently in use by TxDOT. He developed and oversaw the TxDOT Scour Management Program, and the program to manage structures on unknown foundations.

Relevant Experience

Structural Foundation Design
Oversaw foundation design for structures and personally designed foundations for 1000+ bridges ranging from simple off-system structures to complex, major bridge structures. Foundation types designed include drilled shafts, auger-cast piling, prestressed concrete piling, steel H-piling, steel pipe piling, steel and prestressed concrete sheet piling, and spread footings.

Slope and Retaining Wall Stability and Settlement
Oversaw evaluations for global stability and settlement of embankments, earth slopes, and retaining walls, and has analyzed 100+ slope and retaining wall projects. He is highly proficient and experienced in the external stability and global stability of slopes and wall systems and has used programs such as GSTABL to provide detailed models and analyses.

Geotechnical Exploration and Testing
Oversaw policies and methodologies for geotechnical exploration within TxDOT and developed 100+ soil exploration plans. This included determination of soil boring number, location and depth, appropriate in-situ, and laboratory testing, need for and installation of monitoring wells, inclinometers, and other field instrumentation, and final analysis and reporting of results.

Construction Support
Acted as primary construction and maintenance support within TxDOT for issues involving bridge foundations, retaining walls, slope and wall instabilities, river migration, and scour. Work included immediate resolution of time-sensitive construction problems, evaluation and remediation of ongoing maintenance issues, and training of TxDOT and contractor construction personnel.

Relevant Project Experience

Raymondville Drain – Hidalgo and Willacy County Main Outfall Project
This project consists of Geotechnical Exploration, Laboratory Testing and Value Engineering Recommendations for the placement of a new location Main County Outfall System in Hidalgo County and connection to & expansion of an existing Delta Region drain system in Willacy County approximately 60 Miles in length with the purpose of getting water from Hidalgo County to the Laguna Madre. The project includes: 20 Miles of New Location Outfall, 40 Miles of Existing Location Expansion to Outfall, 60 Bridge Crossings (including major crossings of US 281, US 77, SH 100 and Railroad), 1 Major Control Structure at North Main Drain (Interim Phase I Conditions), Potential Lake Detention Pond at La Sal Vieja Lake, Alternative for Diversion to Main Floodwater Channel in Willacy County. Geotechnical information has been primarily collected along all outfall stretches and various analyses were completed to verify adequacy of side slopes for proposed channel section (Slope Stability). Additionally, Foundation Design Analyses & Curves have been primarily generated for all crossings including investigation of Scourability based on D50-D90 parameters at the structure locations. This job is being let out in phases and as such is still currently underway.

Additional Project Information Available Upon Request

Michael J. Maresh, PE

Title
Roadway Design Engineer

Years of Experience
21

Years with Firm
5

Education
BS, Civil Engineering
Texas A&M University

Training/Certifications
Professional Engineer:
Texas/100084

Areas of Expertise
- Project Management
- Roadway Design
- Bikeway Design
- Schematic Design
- Facility Development

TxDOT Pre-Certifications:
3.2.1 Route Studies and Schematic Design
4.2.1 Major Roadway Design
4.4.1 Freeway Interchanges
9.1.1 Bicycle and Pedestrian Facility Development
9.4.1 Bikeway Design
18.6.1 Utility Management & Coordination Oversight

Summary

Mr. Maresh has 21 years of transportation engineering experience in urban and rural roadway design; 10 of those years working for the Texas Department of Transportation's Houston District Office. His responsibilities have included the development of PS&E packages for various types of facilities including freeways, arterials, direct connectors, and county roads. Mr. Maresh's design experience includes 2R, 3R, and 4R design projects, basic operational improvement projects, and full reconstruction of roadways including heavy and complex traffic control issues. He has used various software applications, such as Projectwise, Geopak, and Openroads in the design and coordination of projects.

Relevant Project Experience

Recreational Trails Connectivity Project [Hidalgo County Precinct 2]

B2Z was contracted by Hidalgo County Precinct 2 to develop a Feasibility Study (WA#1) to determine how to connect two existing hike and bike trails in southern Hidalgo County. B2Z utilized drone technology to capture the latest existing property conditions while investigating properties along each alternative that contained special easements by Hidalgo County Drainage District #1 and USIBWC for access.

University Blvd, Sugar Land, TX [City of Sugar Land]

Mr. Maresh served as project engineer for this project that reconstructed University Blvd South (US 90A) and extended the roadway from US 90A to tie-in south of Imperial Blvd. Mr. Maresh supervised the design of University Blvd North from US 90A to Stadium Dr north of Oyster Creek. This included work on the alignments and profiles of University Blvd and an adjustment of US 90A lanes so that University Blvd would have a safe transition to an atgrade railroad crossing with the Union Pacific Railroad lines running parallel to US 90A on the north side. This project involved negotiations with TxDOT because the project would require connecting to a TxDOT facility, altering the cross-slopes of the TxDOT facility, and adding a turn lane on their facility. Mr. Maresh also worked on the demolition of US 90A, the Traffic Control Plan for US 90A maintaining the same number of existing lanes, the at-grade railroad crossing, the bridge over Oyster Creek, and a shared use path on the new bridge and tie-into an existing bike path north of Oyster Creek.

Multi-Use Bike Pathway Design (West NASA Parkway/FM 528) [TxDOT Houston]

Mr. Maresh served as project engineer for the design of a multi-use bike pathway along the north and south sides of NASA Parkway and FM 528. The pathway extended from the west sides of IH 45 through the intersection of IH 45 and tied to the existing bike lanes on West NASA Pkwy.

US 287/US 81 at Harmon Road, Ft. Worth, TX [TxDOT Fort Worth]

Mr. Maresh served as the deputy project manager for the urban freeway widening and frontage road reconstruction project. He supervised the design of the new frontage roads, the realignment of three ramps, the addition of mainlane auxiliary lanes, the new construction of two underpass bridges, and new shared-use paths. Mr. Maresh assisted in the coordination of surveys, Geotech investigation, hydraulic analysis of a FEMA channel with a bridge class culvert, and utility relocation agreements. The project required coordination with the City of Fort Worth for the adjustment of city street profiles to accommodate the required underpass clearances.

Additional Project Information Available Upon Request

Jose Noe Saldivar, PE, CFM

Title
Drainage Design Engineer

Years of Experience
26

Years of Experience
2

Education
BS, Civil Engineering
Instituto Tecnologico de Cd. Victoria, 1997

Training/Certifications
Professional Engineer: Texas/94076

Certified Floodplain Manager CFM/3340-17N

Areas of Expertise
- Hydraulic Design
- Hydrologic Studies
- FEMA Requirements, Coordination & Funding
- Bridge Design
- Roadway Design
- Project Management

TxDOT Pre-certifications
4.2.1 – Roadway Design
8.1.1 – Signing, Pavement Marking, and Channelization
10.1.1 – Hydrologic Studies
10.2.1 – Roadway Hydraulic Design

Summary

Mr. Saldivar over 26 years of progressive experience in transportation and drainage planning and design. He has served as a Project Manager and a Surveying Manager for various engineering firms. He is experienced in route studies and planning, preparation of plans specifications, and estimates (PS&E), utility relocation, geometrics, signage and pavement markings and hydraulics. He has participated on numerous engineering assignments associated with the development of roadways, storm drainage systems, traffic control planning, bridge layout, and various other civil engineering applications. His experience includes design and development and hydraulic report/data sheet development. He is proficient in software such as Windstorm, Culvert, HEC-RAS, TR 55, HY8, Geopak and AutoCAD. Mr. Saldivar has prepared numerous drainage studies and reports including determining proposed improvement impacts, drainage areas, discharges, FEMA floodway requirements, culvert/ bridge locations and sizes, design frequency flow, tailwater and headwater elevations for design and anticipated overtopping of the bridges. He has performed scour analysis and prepared numerous SW3Ps to minimize sediment transport into drainage facilities. Mr. Saldivar's representative project experience includes:

Relevant Project Experience

2018 Drainage Bond Program, Hidalgo County, TX
As Project Manager, Mr. Saldivar was responsible for managing seventeen (17) consultants with countywide projects that would positively affect more than 69,000 structures in Hidalgo County, helping to protect more than $5.5 billion in assessed property value. The 2018 Drainage Bond Program consists of 37 projects of which ten (10) projects required coordination with USIBWC to secure environmental clearance for amended or new licenses for structures outfalling into the USIBWC Floodway. Mr. Saldivar was responsible for reviewing and approving all H&H deliverables.

US 277 / Maverick County, TxDOT-Laredo District
As Project Engineer, Mr. Saldivar was responsible for storm sewer design which proved to be more feasible since the basin size was limited and due to shallow groundwater in the area. The storm system outfalls into Canyon Grande Creek; therefore, the creek was analyzed to find appropriate tail water elevations for culvert drainage areas and regional regression equation for Canyon Grande Creek.

North I Road, Pharr, TX
As Project Engineer, Mr. Saldivar was responsible for storm sewer design, illumination, signing and pavement markings. He analyzed to find appropriate tailwater elevations for the storm drain system. Hydrology services included the rational method for small, paved drainage area. SW3P sheets were completed.

North San Juan Drainage Lateral, San Juan, TX
Performed survey and assisted in performing a hydraulic study and drainage ditch design along with drainage structure for the upsizing the irrigation district owned drainage ditch in north San Juan, Texas from 495, north to its outfall north of Canton Road.

Additional Project Information Available Upon Request

Raphael Campos, PE

Summary

Mr. Campos is a Professional Engineer with 23 years of construction and technical experience in the design, construction, and inspection of transportation projects. Prior to working for the private sector, Mr. Campos worked as a Bridge Designer for seven years in TxDOT's Bridge Division. He also worked as the Contractor's Quality Control (QC) Manager for six years on D-B urban freeway construction projects. His experience includes projects with complex bridge and direct connector structures (steel and concrete), construction phasing, and urban freeway traffic control. Mr. Campos has experience in CE&I, including constructability reviews and managing/ coordinating teams of QC inspectors and testing personnel. He has extensive experience managing local, State, and Federally funded construction projects for the CTRMA, the City of Taylor, Travis County, and TxDOT, as well as verifying compliance with the TxDOT QAP and the TxDOT Guide Schedule for Sampling and Testing. Mr. Campos verifies compliance with FHWA's Labor, EEO, DBE, and Certified Payroll requirements. He also oversees CUF reports and MOH reports.

Relevant Project Experience

TxDOT PHR | US 83 / Starr County, TX | Role: Support Manager

B2Z is a sub-consultant on this $24.8M state highway improvement project consisting of widening a 2-lane rural to a 4-lane divided roadway. This project includes roadway construction, excavation/ embankment, flexible pavement, bridges, storm sewer, box culverts, temporary detours, and retaining walls. B2Z provides on-site full-time construction inspection, material testing, and record-keeping services. B2Z has also performed soil densities, concrete testing, and hot mix placement as well as clear material deficiencies.

Materials Engineering IDIQ / TxDOT Austin District

B2Z was contracted by the Texas Department of Transportation (TxDOT) to perform and supervise all sampling, testing, inspection work, and related services for asphaltic and concrete construction for highway projects. Mr. Campos is managing Level 1B technicians providing inspection for asphalt projects across the Austin District, Level 1A technicians at the asphalt plants, and Level 2 services performing correction factors for the new calibrated TxDOT equipment. He also tested the boring samples from the geotechnical drilling performed from an existing bridge under this work authorization. This contract is still active and currently has two fully executed work authorizations.

CTRMA, Manor Expressway (290E) Phase III, 290 E & SH 130 Direct Connectors (MEP III), Manor, TX

The project included CE&I services on this $127M federally funded improvement project. This project includes two tolled and one non-tolled direct connector flyovers and associated improvements at the 290E/SH 130 interchange in Travis County. The three flyovers will bridge the two toll facilities together. Mr. Campos' responsibilities included reviewing project submittals, shop drawings, answering RFI, reviewing the Contractors' monthly progress schedules, and performing change order negotiation and preparation. He also coordinated with the EOR and processes documentation through e-Builder (CTRMA's document control system).

Summary

Mr. Muñoz has over 40 years of experience in the field of Engineering. With over 25 years of TxDOT experience, Mr. Muñoz brings a wealth of knowledge in the areas of road/bridge design and construction, inspection and materials testing, project lettings, contract administration, change orders, construction payments, and project management. Throughout his career, Mr. Muñoz has gained extensive knowledge of working on large complex Interstate projects, State Farm to Market Highways to Off System Roads and Bridges. His experience includes working with highly experienced Contractors, Subcontractors, City Municipalities and Leaders, County Municipalities and Federal Entities including, but not limited to the Federal Highways and Administration, IBWC, and the USACE. Mr. Muñoz has managed over 100 projects specializing mainly in bridge and roadway construction. As District Construction Engineer in Pharr, Mr. Muñoz prepared several million-dollar change orders, negotiated costly utility disputes for extended performance, and settled construction claims as necessary. In the Dallas District, Mr. Muñoz was also responsible for plans, specifications, and estimates, geometric highway control, pavement thickness design, drainage area mapping, storm sewer design, and hydraulic & environmental reports.

Mr. Muñoz performed the following services on the relevant projects listed below:

- Construction site daily/weekly inspection and management
- Project plan and specification adherence
- Progress meetings
- Evaluate back-charges and change order entitlement
- Evaluate payment requests by contractor

Relevant Project & Area Experience

Mile 3 Road Project (Hidalgo County, TX)
$14M Construction Cost. The Mile 3 N Road Project consists of the reconstruction of the existing 2-lane roadway from Tom Gil Road to FM 492 (Goodwin Road) (3.41 miles) to a 4-lane divided urban roadway consisting of grading, curb and gutter, lime treated subgrade, flexible base, asphaltic concrete paving, storm sewer, culvert structures, sidewalks with ADA ramps, signing, pavement markings, traffic signals, and outfalls.

Dicker Road Project (Hidalgo County, TX)
$16.5M Construction Cost. This reconstruction project consists of expanding the existing 2 twelve-foot lanes rural roadway with shoulders and ditch drainage to a sixty-six-foot-wide divided urban roadway that will accommodate 4-lanes of traffic (two fourteen-foot shared travel lanes, two twelve-foot travel lanes, and one fourteen-foot left turn lane).

Regional Linear Park Project (Hidalgo County, TX)
$3.8M Construction Cost. The RLPP Section II was 2.64 miles of new location consisting of a ten-foot-wide asphalt trail that accommodated two-way shared-use traffic, as well as two prefabricated pedestrian bridges, and three pedestrian box culvert tunnel crossings under three major roadways. The trail was inclusive of pavement markings, signing, and continuous illumination.

US 281 Expressway, Road & Floodway Bridge - Six Segments$184M Construction Cost – Six Reconstruction Projects – 27 Miles. Managed Mainlane Construction, Frontage Roads, Bridges, Super Structures, Fly Over Structures, RE Walls, Storm Sewer Drainage, Large and Small Signing, Localized and High Mast Lighting, and Signalized Intersections.

- Data Research
- Drone pre-flight management & post flight processing
- Trimble Business Center
- Geo-referencing & Geo-processing
- Construction project management
- Schematics
- Conceptual Layouts/Mapping
- 3D Visualization/Rendering
- Bridge Detailing/Design
- Website Design/Creation
- Cartographic Design
- Metadata and Documentation
- Database Creation
- SQL & Python Scripting
- Utility Mapping

Summary

Mr. Pompa has over 18 years of experience in the infrastructure industry. He has participated in a wide range of projects, from road and drainage design to GIS analysis and drone surveying technology. Mr. Pompa is responsible for overseeing the civil infrastructure department by assisting the project engineering team with plan production and design input. Mr. Pompa also oversees the GIS department with over 10 years of experience as a GIS analyst. He is responsible for ensuring our clients are provided with the maps and analysis they need to effectively communicate with their constituents and provide GIS analytics to assist in community development and emergency preparedness. Mr. Pompa also oversees the Drone department which is instrumental to the industry by providing clients and in-house projects with the latest survey-grade orthomosaic imagery and existing land data, such as contours, DEMs, Hydro-statistical data and post-disaster photography and videography.

Relevant Project Experience

Recreational Trails Connectivity Project [Hidalgo County Precinct 2]
B2Z was contracted by Hidalgo County Precinct 2 to develop a Feasibility Study (WA#1) to determine how to connect two existing hike and bike trails in southern Hidalgo County. B2Z utilized drone technology to capture the latest existing property conditions while investigating properties along each alternative that contained special easements by Hidalgo County Drainage District #1 and USIBWC for access.

Hidalgo County Precinct No. 2 Stormwater Management Project
B2Z was contracted to provide a solution to Precinct 2's rural drainage problem, B2Z was tasked to design a stormwater system that provided a positive flow at all rural roads, ultimately discharging stormwater to a nearby drain ditch or detention pond. Mr. Pompa oversaw the data collection via sUAS (drone) aircraft and survey-grade data collection. B2Z processed the data collected to design and develop PS&S sheets for Precinct No. 2 staff's use.

City of Mission Geographic Information System (GIS) Services
Mr. Pompa, with the support of the GIS team, are the fiduciary agents for all data for the City of Mission. With two Senior GIS Analysts, having over 20 years of combined experience, including one GISP, B2Z is responsible for collecting, managing, and processing Mission's GIS data. Mr. Pompa oversaw the creation of the city's first ever online GIS web maps that provide their constituents with real-time planning solutions, preventing residents from having to make a trip to city hall to request city infrastructure data.

Hidalgo County Drainage District #1 Site Assessment Mapping
Mr. Pompa managed two teams to complete this project. He oversaw the drone team's task in collecting aerial imagery of all the colonia boundaries within Precinct No. 3. He also managed their effort in field data reconnaissance using survey data collection devices from Trimble and ESRI (ArcCollector and Survey 123). Mr. Pompa managed the GIS team to make sure they assimilated all the data that was collected by the drone and survey team and generated site assessment maps that identified the colonias legal boundary, easement, existing utilities, existing drainage, etc.

Moveable Bridge Inspection and Routine Maintenance Contracts (RMC)
Mr. Pompa, with the support of the Drone team, performed inspection on the Rio Hondo Lift Bridge within the TxDOT Pharr District and the Cow Bayou Swing Bridge within the Beaumont District. Utilizing drone videography and aerial imagery, Mr. Pompa collected and recorded existing bridge conditions further cataloging and categorizing the data for use within the conditions report.

July 16, 2024

Mr. Mardoqueo Hinojosa, P.E., CFM, CPM, City Engineer
City of Edinburg
415 W. University Drive
Edinburg, Texas 78541

RE: RFQ No. 2024-9 Engineering Services Rotation
Professional Services Agreement

Dear Mr. Hinojosa,

B2Z Engineering, LLC (B2Z) has thoroughly reviewed the Professional Services Agreement provided by the City of Edinburg. We are pleased to confirm that our certificate of insurance, as provided within Tab V of the statement of qualification submission, fully meets the prerequisite insurance requirements. We are committed to maintaining this compliance throughout the project. Furthermore, if selected, B2Z agrees to enter into such an agreement.

Sincerely,

Aisha Gonzalez
President

Appendix

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☑ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

_____

Any such information should be provided on a separate page, attached to this form and submitted with your submittal.

HOUSE BILL 89 VERIFICATION

I, Aisha Gonzalez, the undersigned representative of B2Z Engineering, LLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2270:**

1. Does not boycott Israel currently; and

2. Will not boycott Israel during the term of the contract.

3) Is not currently listed on the State of Texas Comptroller's Companies that Boycott Israel List located at https://comptroller.texas.gov/purchasing/publications/divestment.php

Pursuant to Section 2270.001, Texas Government Code:

1. "Boycott Israel" means refusing to deal with, terminating business activities with, or otherwise taking any action that is intended to penalize, inflict economic harm on, or limit commercial relations specifically with Israel, or with a person or entity doing business in Israel or in an Israeli-controlled territory, but does not include an action made for ordinary business purposes; and

2. "Company" means a for-profit sole proprietorship, organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or any limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company or affiliate of those entities or business associations that exist to make a profit.

SENATE BILL 19 VERIFICATION

I, Aisha Gonzalez, the undersigned representative of B2Z Engineering, LLC, (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

B2Z Engineering, LLC

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☐ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☐ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1).

RE: RFQ# 2024-9 Engineering Services Rotation

To whom it may concern:

Chanin Engineering, LLC is pleased to present our qualifications and offer our structural engineering services for **City of Edinburg Professional Engineering Services Rotation (Structural)** as described in the Request for Qualifications. We are an RGV-based professional firm offering the following engineering services for both the public and private sector:

Structural Design & Detailing | Building Assessments | Project Management | Renovation Design | Natural Disaster Emergency Engineering Response | Windstorm Engineering Alteration Studies | Retrofit Repairs | Feasibility Studies | Distress/Failure Analysis Adaptive Reuse Design | Foundation Analysis

Currently, we provide professional engineering services as the On-Call Structural Engineer for City of McAllen, McAllen ISD, Region One Education Service Center, Laredo ISD, and UTRGV Miscellaneous Structural Projects of Limited Scope. **For City of Edinburg Engineering Services RFQ, we can specifically assist with Structural Engineering (Improvements & Design) in connection with feasibility, cost estimating, planning, design, and execution of renovation and/or new building projects.**

We have a highly qualified team of professionals ready to be assigned to your project(s) immediately. They understand the importance of collaboration and are prepared to work closely with other design consultants, city staff, and stakeholders to meet all requirements. Additionally, our firm has the resources and financial capabilities to complete the project to the highest standard. We are confident we can deliver the desired results within the required timeline.

Our firm strives to exceed our client's expectations by utilizing our team's expertise and dedication to providing exceptional service. Our commitment to quality control and meticulous attention to detail make us stand out, enabling us to deliver innovative and cost-effective design solutions consistently. Our ultimate goal is to establish lasting professional relationships with our clients.

For additional clarifications and/or contract negotiations please contact:
Hector Ramirez, PE—Managing Principal | P: 956.687.9421 | F: 956.687.3211

The information set forth remains effective for a period of 90 calendar days.

We look forward to working with you and thank you for this opportunity to present our qualifications.

Sincerely,

Hector Ramirez, PE
Managing Principal

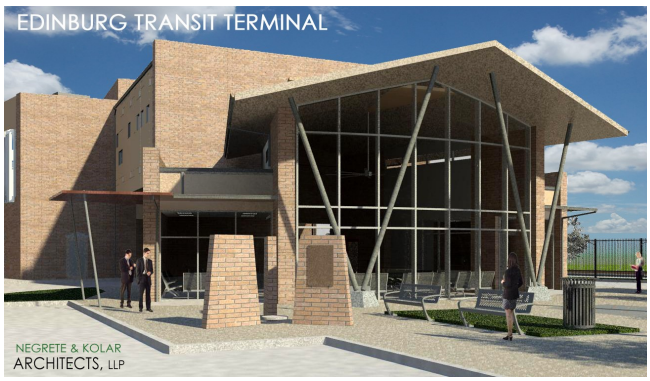
CHANIN
ENGINEERING, LLC
DURABLE STRUCTURES · DEPENDABLE PEOPLE

At Chanin Engineering, we believe that engineering is not just about experience but also about a passionate focus on people. We understand that ***buildings are designed for people, by people***. That's why we are committed to providing excellent **technical expertise** and fostering a **positive culture** as the foundation for our long-lasting professional relationships with clients.

Since our establishment, Chanin Engineering, LLC has been proudly serving the **Rio Grande Valley, Texas** people and has expanded its reach to various cities and areas beyond. Our team is dedicated to delivering prompt and consistent results of the highest standard, whether performing a building assessment or designing a complex structure.

Our primary goal is to exceed our client's expectations by leveraging the skills of our dedicated team. We value customer satisfaction and effective team collaboration, which ensures reliable service and cost-effective designs. With our leadership team at the helm, we strive to cultivate enduring professional relationships with each client. We are thrilled about the opportunity to collaborate with the **City of Edinburg** and look forward to working together toward a successful project.



Chanin Engineering, LLC is an Equal Opportunity Employer and selects the most qualified individuals based on job related qualifications, regardless of age, sex, disability, race, color, religion, national origin, or any other characteristic protected by the law.

Chanin Engineering, LLC (Chanin) is a structural engineering firm providing structural design services throughout Texas. Chanin was founded in 2006 by Miguel Chanin, a licensed Professional Engineer and the firm's Founding principal. The firm was established in McAllen, Texas initially providing services for the private sector. Our clients now range from private development to public entities including local city governments and federal authorities. Our market sector experience encompasses Municipal, Federal, K-12, Higher Education, Healthcare, Commercial, and Retail project types. With over 18 years in operation, our firm's experience ranges from new construction to renovations and structural assessments. Chanin Engineering is currently comprised of 19 employees, including 4 licensed Professionals, 1 EIT, 4 Graduate Engineers,1 Construction Project Manager, 5 Revit/CAD Technicians, and 4 Administrative Support Staff.

Though established in 2006, Chanin's principals bring historic engineering experience as prior structural engineering consulting business owners that date back to 1992 (32 years), allowing us to provide depth of experience, both technical and regional. As the largest (by number of professional staff) Structural Engineering firm in the entire Rio Grande Valley, any client's call to our office will receive our immediate attention and guarantee of punctual response. Our McAllen office's close proximity **(7.5 miles) to the City of Edinburg**, will allow us to allocate the resources necessary from principal, project manager, and production staff to be readily available to successfully complete work directed to us.

Chanin has been fortunate to be able to participate in our local communities by providing structural engineering services for the various local cities that make up the Rio Grande Valley. We also have also contributed to other local governmental agencies like Hidalgo County and the Texas Department of Transportation. Currently, we are on our 12th year in providing services as the On-Call Structural Engineer for the City of McAllen.

Chanin has ongoing or prior experience in working on specific project contracts through the selected Prime Consultant, whether Architect, Engineer, or General Contractor. Over the past 18 years, we have worked successfully with the City of Edinburg, McAllen, Mission, Weslaco, Pharr, Hidalgo County, and the Texas Department of Transportation among others. We take pride in assisting our local entities by providing services that help promote our local community through the built environment. Our team has successfully participated in designs for event centers, public safety buildings, municipal administration buildings, municipal parks, fire stations, and airport hangers. The following page features a partial list of ongoing/recent projects completed by us.

The following is a partial list of current or ongoing Municipal projects designed by Chanin Engineering within the past 10 years.

Lower Rio Grande Valley Dev. Council, Rio Transit Center, Weslaco, TX
STARR County Solid Waste Transfer Station, Rio Grande City, TX
NAS Aviator Memorial Monument, Corpus Christi, TX

As a firm, we are committed to providing our clients with unparalleled attention and response. As such, the Chanin Engineering leadership team carries mobile phones for prompt ongoing response to all inquiries, whether they originate from interoffice, from our clients, or the associated project team members. Additionally, our local presence and availability allows us to respond within minutes when necessary to all City of Edinburg project inquires, meetings, or site visits.

Though established in 2006, Chanin's principals bring prior historic engineering experience as prior structural engineering consulting business owners that date back to 1992 (32 years), allowing us to provide depth of experience.

As the largest (by number of professional staff) Structural Engineering firm in the entire Rio Grande Valley, any client's call to our office will receive our immediate attention and guarantee of punctual response. Chanin Engineering is currently comprised of 19 employees, including 4 licensed Professionals, 1 EIT, 4 Graduate Engineers,1 Construction Project Manager, 5 Revit/CAD Technicians, and 4 Administrative Support Staff. We allocate the resources necessary from principal, project manager, and production staff to be readily available to successfully complete work directed to us.

We understand the scope of the (Structural) Engineering Services to include, but not be limited to:

Feasibility Studies | Design Development | Cost Estimating | Plan Preparation Specifications | Coordination | Preliminary and Final Documents | On-Call Services

Chanin will follow Edinburg City standards for design and construction, the schedule and the construction budget, as well as any other applicable requirements/regulations, as the basis for our work. As such, our general technical approach to providing the scope of services as listed is as follows:

Existing Facility Assessment/Retrofit

- Collect facility information and/or structural layout plans (if available) from the building owner to understand structural system and critical areas for observation.
- Perform visual observation to obtain condition of structure, loading of structure, critical areas in need of attention/repair.
- Provide owner with summary report of visual observations and structural recommendation(s) of appropriate action required, if necessary.

New Construction Design

Schematic Phase

Establish all necessary building criteria such as:
Building Code & Design Criteria | Selected structural system (materials) | Size | Occupancy | Location | Lateral Load Resisting System

Additionally, we will:
Perform preliminary design calculations | Establish framing layout | Establish tentative sizing | Coordinate with Architectural, Mechanical & Civil features | Provide typical details

Continued on Next Page

New Construction Design Cont.

Design Development Phase

Develop special structural framing details/notes | Develop structural elevations
Size structural framing members | Provide elevations | Provide plan dimensions
Provide design parameters | Coordinate with Architectural, Mechanical & Civil features

Construction Document Phase

Approved DD Documents are further developed into comprehensive Construction Documents & Specifications | Ensure all review/coordination issues have been resolved

Bidding Phase

Assist the City in comparing/evaluating bid submittals | Answer structural design questions to ensure Contractors are adequately interpreting Structural Documents

Construction Administration Phase

Review ASI's. RFI's, PR's to ensure conformance with Construction Documents | Review structural shop drawings | Perform job observations | Provide observation reports of work observed

The technical approach as described above is general in nature. Should our firm be selected for Structural Engineering Services, it is our understanding that the scope of work (and thus technical approach) will depend on the specific project needs. Additionally, we understand that a scoping meeting will be set to identify specific project needs. We will then develop a detailed draft scope of work with the associated costs and schedules.

Technological Capabilities

At Chanin, our team counts on 12+ computers, 1 large format plotter, 1 printer/scanner and the following design/drafting software to accomplish the development of construction documents:

Revit Structural (BIM) v.2024 | Autocad v. 2024 | Ram Structural System | Enercalc RISA 3D | Floor Vibe | LPile | Descon Win | Descon Brace

In addition, Chanin has the financial resources to obtain additional design software or hardware as required to meet the needs of a project or client.

Ability to Meet Budget/Timeline Requirements

Chanin will assure that the highest quality services are received by the Client throughout the entire life of the project. Chanin will make every effort to ensure that your projects proceed on schedule and within budget. The size of our team along with our technological capabilities directly facilitates our ability to produce quality designs that meet project deadlines. Additionally, our designs focus upon the economic use of structural materials while maintaining safe and code complying designs. Project experience is diverse while maintaining uncompromising attention to detail.

CHANIN ENGINEERING, LLC

DURABLE STRUCTURES • DEPENDABLE PEOPLE

At Chanin, each project is managed as described below:

1. At the start of the project, the **Managing Principal/Project Manager, Hector Ramirez**, will directly communicate with the City of Edinburg's representative. Mr. Ramirez will be responsible for assessing and authorizing the project contract and scope of work provided by the City. As the Managing Principal/Senior Project Manager, he will interpret, delegate, and coordinate all engineering projects, review plans and technical specifications, and prepare contract documents and estimates. He will supervise the project's design and ongoing progress, coordinating with the City, sub-consultants, and regulatory agencies. Mr. Ramirez will also provide operational supervision and technical guidance. Once the Owner Authorization is received, Mr. Ramirez will conduct a design meeting to initiate the project and delegate work to the structural design team. He will supervise the structural designers and the production team and will be responsible for planning, developing, coordinating, and directing projects. As a technical specialist who formulates and develops advanced structural engineering concepts, he reviews plans and prepares technical specifications. He manages the day -to-day planning, operation, and problem-solving necessary for the team to meet the required production level. During the Construction Administration phase, Mr. Ramirez reviews field observations, responds to RFIs, and creates ASIs and PRs as needed.
2. Throughout the development of the engineering design and drawing preparation, **Oscar Lopez, PE, Principal/QCQA,** is responsible to implement our Quality Control and Quality Assurance program. Specifically, he reviews engineering design, plans and technical specifications. He supervises the design and ongoing progress of projects and provides senior level input and evaluation of projects for each team member. He communicates all ongoing progress of the project with Mr. Ramirez.
3. Upon receiving direction from the Senior Project Manager, the Structural Design team consisting of **Cristian Guajardo, MSEM, PE/Assoc. Principal Jose Garza, Graduate Engineer/Assoc. Principal Rodolfo Martinez, EIT, Sandra Valdez, Graduate Engineer, Eduardo Cid, Graduate Engineer, and David Rioferio, Graduate Engineer,** assist by performing the routine aspects of structural engineering assignments. Specifically, they perform structural design calculations, develop design drawings, coordinate project assignments with technicians, research code issues, research design options, and document findings for the Senior Project Manager. Mr. Garza, Mr. Guajardo, Mrs. Valdez, and Mr. Martinez may attend “kick-off” and design review meetings and interact with clients as necessary. All work is produced under the direct supervision of the Professional Engineers on staff. During the Construction Administration phase, the Structural Design team may assist in field observations, review shop drawings, respond to RFIs, and create ASIs and PRs as required.

Continued On Next Page

4. Upon project initiation, the Production Team, **Jose Perez, Luis Reyna, Ernesto Carreon, Vacilio Diaz, and Kevin Perez**, begins setting up and developing design documents according to established standards and procedures and under the general supervision of the Production Manager, the Structural Design Team, and the Senior Project Manager. Throughout the development of the construction documents, the Production Team prepares engineering drawings from rough sketches or general engineering and design information provided by the Structural Design Team or Professional Engineers.
5. Upon completion of the design documents and initiation of the Construction phase, our **Construction Senior Project Manager, Mario Guajardo**, is responsible for all aspects of the construction phase. This includes but is not limited to, performing structural site observations to ensure conformance with the Construction Documents and reviewing shop drawings. He collaborates with the design team and client as necessary.
6. Throughout the entire project, the **Administrative Staff (4)** is responsible for general clerical functions, including generating memos, letters, and email correspondence and managing the project calendar of deadlines for deliverables. The administrative staff is also responsible for ensuring all client inquiries, whether by phone, email or in person, are attended to promptly. All administrative staff reports to Mr. Ramirez and assume work directives from the engineering staff.

CHANIN
ENGINEERING, LLC
DURABLE STRUCTURES • DEPENDABLE PEOPLE

Our firm's philosophy revolves around our quality assurance program. We aim to exceed client expectations by leveraging our skilled team and unwavering commitment to exceptional service. Every project benefits from the direct involvement of licensed professional engineers and our firm's principals, the backbone of our quality control system. This approach enables us to provide reliable service and deliver innovative, cost-effective engineering solutions.

In addition to close oversight by our principals, our firm also counts on Mr. Oscar Lopez, PE whose main role at Chanin is to provide Quality Control and Quality Assurance of our deliverables. This responsibility requires him to engage in the project each step along the way by taking a close look at both the process of our engineering design and plan development, as well as the quality of our structural documents. Our goal is to provide documents that are comprehensive yet simple to understand out in the field.

On a weekly basis, Chanin Engineering conducts a Staff Review Meeting in which each project status is discussed and project tasks are prioritized and delegated to each project team member. This weekly meeting allows our entire design team to collaboratively and closely monitor project progress and quality.

We understand that construction projects rely heavily on the team efforts of many design disciplines, regulatory agencies, clients, owners, and subcontractors. Throughout the design phase of each project, we take a close look at the design documents developed by fellow subconsultants like Civil, MEP and Geotechnical in order to foresee and address potential construction issues. The same attention to detail is provided during shop drawing review. As construction breaks ground, we gear up to perform the required field observations related to the structural portion of the work to ensure the contractor is accurately interpreting the structural design documents. Should we encounter nonconformance items, we take the proper steps to inform the contractor, owner and subconsultants as required in order to address safety or quality concerns. Each site observation is followed up with a formal observation report that details our nonconformance findings, specific direction given to the contractor, and general progress of work. From the development of our statement of qualifications, to design development and into project close out, our team of experts keeps a close eye on the quality of our services and deliverables.

City of McAllen Fire Training Facility
This approximately $4.6 million project consisted of the structural design and construction phase services for an approximately 11,000 SF new single story Fire Training Facility. The Fire Training Facility is comprised of office spaces, lecture hall, training classrooms and lounge area. The single-story building is framed with conventional steel framing and cold rolled metal stud wall framing with 8" masonry walls supported by a slab-on-grade and footing foundation system. The project is currently in Construction Phase.

City of Mission

Juan Pablo "JP" Terrazas, P.E, CPM, Assistant City Manager/City Engineer
1201 E. 8th Street, Mission, TX 78572

City of Mission Event Center
The 40,000-square-foot facility, which cost approximately $16 million, was explicitly designed to serve the City of Mission and its residents. The center has become a prominent feature in the region and is used for both corporate and social events. The facility's construction included Reinforced CMU masonry walls, cast-in-place concrete beams, structural steel canopies, framing consisting of steel joists, and metal roof decking. The building was completed in March 2018 and has since become a cornerstone of the city.

Gignac Architects

Juan Mujica Jr, Project Manager

City of Brownsville B-Metro Yard Rehab Tiger Project
Chanin Engineering provided comprehensive structural engineering and construction phase services for three buildings at the Brownsville Metro. The total construction cost was approximately $7.5 million. The first structure is a Fuel Tank Canopy, covering about 3,076 square feet of open space. It was framed with built-up steel frames and steel purlins, supported by a slab-on-grade and pier foundation. The second building, a Bus Wash/Restroom, is approximately 2,265 square feet and features wood rafters supported by CMU walls and a slab-on-grade foundation. The third structure is a Storage Building, covering around 10,013 square feet. It was built on an existing foundation with pre-engineered frames and steel purlins, supported by concrete piers at point loads. The project is still in construction but showcases Chanin Engineering's expertise in delivering high-quality structural services.

Representative projects of Chanin Engineering, LLC's recent work for the City of Edinburg.

For a complete description of each team member's role, please refer to the Management Plan on page 12.

Project	**City of Edinburg Wastewater Treatment Plant Office, Edinburg, Texas**
Services	Complete Structural Engineering Services
Scope	*New, approximately 1,800-square-foot Operations Office building. Structurally, the building features a slab-on-grade foundation, exterior load-bearing CMU walls, steel columns for interior support conditions, and a conventional metal roof framing system. Construction was completed January 2020.*
Team Members	Miguel Chanin, Founding Principal Hector Ramirez, Managing Principal /Sr. PM Oscar Lopez, QA/QC JC Garza, Lead Project Engineer

Project	**Edinburg Transit Terminal, Edinburg, Texas**
Services	Complete Structural Engineering
Scope	*15,000 SF, two-story facility will serve as the new home for Valley Metro, the new headquarters for the Edinburg Economic Development Corporation, and various lease spaces. The facility consists of masonry, conventional steel and pre-cast concrete; the two retail buildings located on the south side of the terminal consist of masonry and conventional steel; the four bus stop canopies are conventional steel. Construction was completed February 2020.*
Team Members	Miguel Chanin, Founding Principal Hector Ramirez, Managing Principal /Sr. PM Oscar Lopez, QC/QA

Project	**Edinburg Downtown Parking Garage, Edinburg, Texas**
Services	Complete Structural Engineering
Scope	*The project is a mixed-use space development project located at 201 N. Closner Blvd. in Edinburg, Texas. The project involves the construction of a modern three-story parking garage and ground-level offering retail spaces. The project includes an expansion plan to elevate the structure into a five-story parking facility to meet the increasing demands of future needs. The garage will occupy an approximate footprint of 35,000 square feet and accommodate approximately 580 parking spaces. The building's maximum height will reach 59 feet above street level, with the elevator and stair towers soaring to approximately 79 feet. The foundation system utilizes reinforced concrete piers and a precast reinforced concrete structure to ensure the facility's longevity. The project aims to set a new standard for integrated community spaces and sound structural performance. Construction documents were completed December 2023*

Insurance: Claims

Provide a list of any insurance claims against the firm within the past 5 years.

1. Texas State Aquarium (08/29/23)

The pending claim is related to two concrete roof girders, which developed cracks in part most likely due to the contractor not providing the required reinforcement during construction. This oversight reduced the capacity of the beam and needed reinforcing. To sort out this issue, we have contacted our Professional Liability Insurance Carrier and are working towards a resolution with all parties.

RE: RFQ No. 2024-9 Engineering Services Rotation

To Whom It May Concern:

Civil Systems Engineering, Inc. (CSE) appreciates this opportunity to submit our Statement Of Qualifications to provide professional engineering services for the City of Edinburg. CSE pledges to provide quality, optimized, and cost-effective engineering solutions to the proposed City of Edinburg projects.

Our project team represents a combination of local understanding and interest and national expertise. We represent the latest technology of modern engineering practices in Texas. We believe that our qualifications, combined with our track record of delivering quality engineering solutions, will allow us to serve the City of Edinburg in a range of engineering projects in floodplain management studies and mapping, flood control modeling and design, drainage impact and mitigation analysis, hydraulic structures (bridges and culverts) modeling and design, water resources availability and management studies, water rights permit application, river/reservoir systems study, water/wastewater systems modeling and design, GIS applications, traffic and roadway/bridge planning and design, social and economic feasibility studies, and environmental studies.

The Primary and Secondary contacts for this submission are:

Primary Contact: Deren Li, Ph.D., P.E., D.WRE, CFM (President)
1202 Lake Pointe Parkway
Sugar Land, Texas 77478
Telephone: 713-782-3811

Secondary Contact: Javier Zamora, P.E. (Sr. Project Manager)
4610 Magnolia Pt.
Harlingen, Texas 78552
Telephone: 956-564-3498

To date we have received no addendums to this RFQ.

Civil Systems Engineering, Inc. (CSE) has read the provided Professional Services Agreement and will meet the prerequisite insurance requirements, and if selected CSE agrees to enter into such agreement.

We look forward to the opportunity to work with the City to plan, design, implement, and manage various challenging projects facing the City.

Sincerely,

Deren Li, Ph.D., P.E., D.WRE, CFM
President

SECTION I

FIRM QUALIFICATIONS AND EXPERIENCE

Civil Systems Engineering Inc. (CSE) is consulting engineering firm registered with the Texas Board of Professional Engineers (F-5246). CSE was incorporated in the State of Texas in 2002 with 22 years of engineering practices in Hydrologic and Hydraulic Analysis and Design, Transportation Engineering, and GIS Application. CSE has the following offices:

Headquarters Office:
1202 Lake Pointe Parkway
Sugar Land, Texas 77478
Attn: Deren Li
Telephone: 713-782-3811
Fax: 713-782-3812

Harlingen Office:
4610 Magnolia Pt.
Harlingen, Texas 78552
Attn: Javier Zamora
Telephone: 956-564-3498

Mission Office:
2112 South Shary Road Suite 20
Mission, Texas 78572
Attn: Martha Viada
Telephone: 956-345-2401

The Woodlands Office:
10857 Kuykendahl Road, Suite 250
The Woodlands, Texas 77382
Attn: Kyle Bertrand
Telephone: 832-792-1069

The work for the City of Edinburg will be led by our Harlingen and Sugar Land offices with support from the Mission and The Woodlands offices. Dr. Deren Li, Ph.D., P.E., D.WRE, CFM, President of Civil Systems Engineering, Inc. will be the official contact, and he can be reached at 713-298-6819.

As president of CSE, Dr. Li has spent more than 80 percent of his time on projects in the Lower Rio Grande Valley in the past 20 years assisting Hidalgo County, Cameron County, City of Edinburg, City of Harlingen, FEMA, developers and citizens to address numerous challenging issues related to storm water drainage design, floodplain determination and mapping, flood control facility planning and design, water resource facilities planning, roadway improvement planning and design, and water availability studies and water resource management planning.

Civil Systems Engineering, Inc. provides services and maintains staffing to cover most of the specialized categories listed in the RFQ to include items in bold:

Specialized Service Categories

- ***Street Infrastructure Evaluation and Improvements***
- ***Utility Infrastructure Evaluation and Improvements***
- ***Water and Wastewater Evaluation and Improvements***
- ***Hydrology & Hydraulics***
- Traffic Engineering Services
- Environmental Engineering Services
- Mechanical, Electrical & Plumbing (MEP) Engineering Services
- Pavement Management and Improvements
- ***Erosion and Sediment Control Design***
- Structural Engineering (Improvements & Design)
- Transportation Evaluation
- Traffic Signal Design
- ***Civil Engineering***

CSE is staffed with multiple Professional Engineers licensed and in good standing with the State of Texas. In addition, a number of our staff hold advanced degrees in engineering and specialty certifications

including certified floodplain manager, project management, and numerous TxDOT pre-certifications. As such we confirm our ability for performing the services listed, but not limited to, those stated in the RFQ to include:

Anticipated Services Noted

- Field investigation and data collection
- Design development and cost estimating
- Review and check plans, subdivision and parcel maps, and computations submitted by private developers
- Prepare environmental reports
- Coordination with utility agencies, consultants, and other public agencies
- Preparation of preliminary documents, plans and/or reports including findings and Recommendations
- Preparation of handouts and graphical displays for public meetings
- Management and monitoring of planning projects
- General civil engineering support services as assigned
- Feasibility evaluation and alternatives analysis
- Preparation of plans, specifications and estimates
- Review of engineering and encroachment permits
- Review of environmental and engineering reports and proposals
- Organization, participation and presentations at meetings held by City staff, the City Council, neighborhood groups, and other stakeholders
- Preparation final documents, plans and/or reports responding to City and other stakeholder comments
- Management and monitoring of capital improvement project
- Administration and monitoring of regional, state and federal grants

The CSE's success relies on its experienced and competent team members. Our principal & lead engineers include:

Deren Li, Ph.D., P.E., D.WRE, CFM (President)	Kurt E. Killian, P.E., CFM (Sr. Vice President)
Kyle A. Bertrand, P.E. (Vice President)	Javier Zamora, P.E. (Sr. Project Manager)
Homero L. Gutierrez, P.E., RPLS (Sr. Project Manager)	Adebola Fashokun, P.E., CFM (Sr. Hydraulic Engr)
Patrick Rummel, P.E. (Sr. Project Manager)	Garrison Day, P.E. (Project Engineer)

Our engineering staff possess an extensive range of engineering experience, technical skills, and depth of education. Our engineering staff take personal commitment to our clients' projects and their responsiveness to unique client needs and interests is what differentiates our work and the valued results we deliver.

Our experienced professionals, depth of capabilities, resources, and advanced technology enable us to provide innovative, cost-effective, and constructible solutions to the City of Edinburg. CSE's professional engineers have various pre-certificates with Texas Department of Transportation (TxDOT) in roadway/highway design, hydrologic and hydraulic design, and construction management and inspection. CSE has successfully provided engineering services to various agencies including Hidalgo County, Hidalgo County Drainage District No. 1, City of Edinburg, City of Harlingen, City of McAllen, City of Mission, City of Houston, Harris County, Harris County Flood Control District, Fort Bend County, City of Tomball, TxDOT, FEMA, USACE, and TWDB.

CSE employ cutting edge **Technology** in automation of mapping, image processing, modeling, visualization, geospatial analysis, planning, design and management of our projects. Our engineering staff are well trained in GIS (ESRI ArcGIS and Intergraph GeoMedia Professional), Global Mapper, Corps of Engineers' H&H models (HEC-1, HEC-2, HEC-GeoHMS, HEC-HMS, HEC-GeoRAS, 1D/2D HEC-RAS, and HEC-FDA), EPA-SWMM, PCSWMM, TxDOT WinStorm, Microstation, and AutoCAD. Our project experience in applying both traditional and modern engineering approach tells us the value of GIS

technology in our engineering projects. GIS application has enabled us to dramatically reduce engineering costs for our clients by efficiently utilizing available data such as LIDAR, images, drainage systems, land use, environmental, etc., performing multiple scenario analyses, and creating delivery products quickly.

CSE understands the challenges facing the City of Edinburg to meet the City's infrastructure needs. Our staff has obtained **extensive first-hand experience** through many years of Lower Rio Grande Valley, municipality (large & small), state and national projects including drainage systems modeling, planning and design, FEMA floodplain management studies and mapping, water resources development and management studies, roadway and municipal utility systems improvements and design.

The philosophy of our engineering practices is **Systems Engineering**. The traditional piece-meal project approach cannot meet the needs of complex engineering problems facing our communities today. A sound engineering solution that can be implemented must be derived from a systematic approach considering all aspects pertaining to a project, tangible and intangible, from concept to long term operations. Applying our established Systems Engineering approach to our daily engineering practices, CSE has saved our clients millions of dollars.

Civil Systems Engineering, Inc. (CSE) is committed to provide systemized cost-effective engineering solutions to the City of Edinburg. We provide professional engineering services in water resources, floodplain management, hydrologic and hydraulic studies, environmental, transportation, land surveying, and GIS mapping/database development.

CSE is an equal opportunity employer and is certified as **Historically Underutilized Business (HUB No. 1331030764300)** by Texas Building and Procurement Commission, **Disadvantaged Business Enterprise (DBE No. 15-02-9213)** by Texas Department of Transportation, and **Minority and Disadvantaged Business Enterprise (M/DBE MBE No. 15-09-9213)** by City of Houston. We are complied fully with all Affirmative Action Program policies.

Technical Approach

Our project team has the wealth of knowledge, extensive experience, and cutting-edge technology to provide professional engineering services for the City of Edinburg in a systematic, innovative, and cost-effective approach. The following are the major tasks and our overall project planning/implementation approach:

Project Management and Administration. Primary tasks include:

- Meet with city staff to define project objective and detailed scope, identify constraints, and determine regulatory/other entity approvals, schedule, etc.
- Prepare and maintain project budgets and schedules. Routine tracking and updating the budget and schedule in conjunction with the preparation of a project progress report will occur on a monthly basis, or as required.
- Prepare timely progress reports and invoices.
- Prepare and maintain a project specific QA/QC plan acceptable to the city. Documentation of plan red lines, reviewer comments and resolution, and calculation revisions will be maintained.
- Set up an effective communication plan (meetings, workshops, phone conversations, email, fax, website, and US mail). Maintain constant coordination with City of Edinburg, and other local entities, and state and federal agencies such as TxDOT, TWDB, TCEQ, USGS, NRCS, FEMA, and IBWC to address any planning/design issues related to the project. Conduct project meetings to review project progress, provide options, listen to City staff questions/concerns and provided recommendations and/or receive direction as needed. Close coordination with the surrounding communities is essential for a successful project development.
- Develop and maintain a public information program for the project development. This will provide a communication channel to address public's concerns and/or solutions with respect to the project issues, and inform the public the status of the projects. Public meetings will be conducted to get input from the public.
- Initiate a funding plan for implementation of the proposed improvements.

Design Criteria. Design criteria for the project will be consistent with the requirements of the City Engineering Department, TxDOT, FEMA, Federal Aviation Administration (FAA), International Boundary and Water Commission (IBWC), and drainage districts.

Data Collection. Collect and review all existing data and previous studies relating to the project, including as-build plans, historical flood complaints, drainage problems areas, drainage and flood control studies and reports, storm sewer system maps and as-built drawings, floodplain studies, LiDAR topographic data, digital elevation model (DEM), street map, aerial photographs, land use and land cover map, and soil map, as well as hydrologic and hydraulic models, from various agencies such as City, County, TxDOT, FEMA, Texas Natural Resources Systems (TNRIS), United States Geological Survey (USGS) and Natural Resources Conservation Service (NRCS).

GIS Workspace. Develop a project Geographic Information System (GIS) workspace to assist the overall project development. Project development relies heavily on spatial-based data to establish the characteristics and performance of both major and minor roadway and drainage systems. This data includes the physical characteristics of the roadway, storm sewer and open channel drainage network, the physical characteristics of the runoff catchments, and the overall surface relief that defines the major drainage system boundaries, overland flow paths and potential hazard areas associated with flooding

during extreme runoff events. The GIS workspace will be based on a consistent datum, projection and coordination system such as the State Plane Coordinate System of 1983 (Texas South Zone 4205) with Lambert Conformal Conic Projection. Specifically, the GIS workspace will be utilized for:

- Base mapping to overlay and display aerial photographs, USGS DOQQs, street maps, stream ditch centerlines, water bodies, floodplain boundaries, political boundaries, and local and NGS bench marks.
- Drainage system mapping and inventory (pipe shape, material, length, size, slope, flowline elevations, roughness coefficient, inlet/manhole size and types, manhole/inlet rim and flowline elevations, channel cross section geometry, material, roughness coefficients, length, slope, side slope, flowline and bank stations and elevations)
- DEM reconditioning to develop a hydrologically corrected DEM for ArcHydro and/or HEC-GeoHMS terrain data processing, drainage area delineation, and estimation of drainage basin parameters for hydrologic modeling analysis (HEC-HMS, EPA-SWMM, and/or TxDOT-Winstorm)
- HEC-GeoRAS modeling to develop HEC-RAS drainage network geometry data file for hydraulic modeling analysis.
- Provide spatial data for Web-based GIS to publish drainage related spatial data

Field Surveying. Field surveying is one of the important tasks for this project. Field survey methods and techniques will conform to the City of Edinburg Standards. Specific survey tasks include: establish horizontal and vertical controls to be consistent with those established for the FEMA countywide Flood Map Modernization Project LiDAR data, obtain inlet/manhole location and elevation information, specifically including gutter line elevations upstream, center, and downstream of inlet, manhole rim elevation, back of curb elevation, and adjacent natural ground elevations, and obtain channel cross-section and hydraulic structure geometry data according to City survey standards, FEMA data capture guidelines, and Corps of Engineers HEC-RAS Hydraulic Reference Manual.

System Mapping and Inventory. Based on as-built plans and field surveyed data, drainage channels and storm sewer systems will be mapped within the project GIS workspace along with the base map data. Conditions assessment data will stored in a geodatabase for each drainage feature.

DEM Reconditioning/ Terrain Proceessing. High resolution LiDAR data from FEMA Map Modernization Project for Cameron County will be used for this project. LiDAR topographic data does not reflect the underground storm sewer systems. The LiDAR data need to be reconditioned by “burning” the storm sewer lines into the LiDAR. Also, the LiDAR data needs to be reconditioned to reflect stream crossings at roadway and other structures. The resulting digital terrain model must represent actual stream patterns.

GIS-based and ORD-DU tools will be used to generate project DEM. From the DEM, project data, including roadway profiles, drainage area delineations, and system parameters will be generated. The terrain processing is a series of steps to derive the drainage network, including flow direction, flow accumulation, stream definition, watershed delineation, watershed polygon processing, stream processing, and watershed aggregation. Stormwater runoff does not recognize jurisdiction lines. Close coordination with the surrounding communities is essential for a successful master plan. ArcHydro/HEC-GeHMS makes it possible delineate watersheds and drainage basins in much efficient and effective way.

Traffic Data Review. Request & verify ADT/traffic/crash data, coordinate desirable design speed with City, use appropriate design vehicle for turning movements, provide adequate turn lane storage lengths

and safe harbor area in median openings. Perform Traffic Signal warrant analysis as applicable. Consider signal type (mast arm vs. span wire) and foundation placement at intersections with regards to utilities. Consider impacts on signing, illumination, sidewalks, ITS, etc.

Roadway Geometric Layout. Develop a preliminary geometric layout prior to 30% submittal for approval by the City. Design preliminary profile alternatives (centerline, C&G, ditches, and cross section template elements). Layout will include existing & proposed features, lanes, shoulders/curb/curb& gutter, major utilities, ROW, structures, clear zones, ped accommodations, and other major design elements.

Roadway Final Design. Design according to City or TxDOT Roadway Design Criteria. Horizontal and vertical alignments will be developed, considering sight distance (K values), superelevations, drainage, minimizing or eliminating additional ROW, and balancing earthwork quantities. OpenRoads Designer or Civil3D will be used to create design files (Terrain, Template, Civil Cells, Corridor Models, Cross-sections), develop alternatives, 3D surface models, calculate quantities, and generate PS&E sheets. Multiple templates will be evaluated to create the most cost-effective design. The proposed alignment will be designed to avoid relocation of existing utilities and defined ENV impacts as much as possible.

Traffic Control (TCP). Prepare TCP in accordance with City, TxDOT, and/or latest criteria/standards, and TMUTCD. The design shall maintain existing access while balancing property owner needs against safe and effective traffic flow. Consider TCP phasing methods (i.e., traditional, 1-lane 2-way, work zone restrictions, ensure buffer zones, etc.) and ensure the utmost priority is placed on maintaining safety in all phases. Use materials suitable for the construction type & methods being proposed (i.e., rapid cure vs. regular, etc.). Consider existing pavement thickness with regards to drop-offs and barrier needs. Meet with City to identify TCP constraints, detour/closure options, and usual day/time traffic. Conduct Site Visits to observe posted speed limits, sight distances, access, schools/businesses, and traffic operations.

CSE's CONSTRUCTION SEQUENCING PLAN and TCP development approach includes:

- ✓ Review traffic speed, ADT, truck% and accident data,
- ✓ Evaluate topo/terrain features, utilities/ joint bids, access, ROW, ENV constraints, budget, and design.
- ✓ Check existing roadway's horizontal alignment/ vertical profiles to identify design deficiencies and ROW needs.
- ✓ Provide access to abutting properties during construction and meet access management guidelines
- ✓ Evaluate options of Road Closure with Detour; One-Lane, Two-Way Diversion. Evaluate detour availability, including adjacent state roadways.
- ✓ Evaluate impacts to traveling public, development, safety, and drivers' expectancy.
- ✓ Optimize phasing, closures, & detours to minimize impacts to traffic flow. Determine the need for a regulatory speed zone reduction request and maintain all weather facility to the existing driveway
- ✓ Provide a safe work zone for contractors with appropriate buffers, safe construction access locations, smart work zone technology as appropriate.
- ✓ Develop construction schedule and staging sequence/ durations based on constraints, utilities, locations of asphalt plant, production, and material stockpiles.

Drainage Design and Analysis includes:

- **Drainage and Hydrologic Parameters Estimation.** Drainage basin processing of ArcHydro/HEC-GeoHMS estimates stream and subbasin physical parameters. Stream and subbasin physical characteristics such as channel length, upstream and downstream elevation, channel slope,

longest flow paths, centroidal flow lengths, and basin slopes are extracted from the terrain data. The resulting subbasin parameters are then used to estimate hydrologic parameters for each subbasin for hydrologic modeling analysis. **Land Use Characterization Analysis** of existing and future land uses within the city will be characterized through the use of digital aerial photos, parcel maps, zoning maps, and annexation plans and mapped in the GIS workspace.

- **HEC-HMS Hydrologic Modeling Analysis.** The USACE's HEC-HMS hydrologic model will be used for large storm event hydrologic analysis to determine peak discharges and corresponding hydrographs at various key study points. The subbasin delineations from ArcHydro/HEC-GeoHMS will be modified using aerials, land use maps, and a more detailed investigation of the LiDAR topographic data. The rainfall runoff transformation method (SCS Unit Hydrograph, Clark Unit Hydrograph, or others) will be selected for this study and corresponding modeling parameters (such as Curve Number, Lag Time, Time of Concentration, Percent Impervious Area, Initial Loss) for each basin will be estimated. Modified Puls or Muskingham-Cunge method will be used for stream reach routing.
- **HEC-GeoRAS Processing.** HEC-GeoRAS will be used to create geometric input files for HEC-RAS model development. It requires a digital terrain model (DTM) for the studied stream represented by a triangulated irregular network (TIN) and a set of line datasets, including Stream Centerline, Flow Path Centerlines, Main Channel Banks, and Cross Section Cut Lines. To create a TIN model, stream cross section field surveyed data will first be processed and merged with the available LiDAR DEM dataset. Based on the field surveyed data points, stream banks and stream toes (break lines) and limits of the survey data are created and converted to 3D lines with elevations at the vertex from the survey data. The resulting 3D lines and survey points are then used to create a Triangulated Irregular Network (TIN) terrain model along the channel alignment. The resulting TIN is then converted to grid dataset with 10-foot cell size, and merged with the LiDAR data with priority given to the channel survey grid. The output merged raster dataset provides a better definition for the stream channel.
- **HEC-RAS Hydraulic Modeling Analysis.** Corps of Engineers' HEC-RAS modeling program will be used to evaluate hydraulic conditions for drainage channels and bridge/culvert crossings. A HEC-RAS geometry model is first created by importing the resulting HEC-RAS geometric import file from HEC-GeoRAS. The geometry model will be supplemented manually with field surveyed hydraulic data. Flow data for various frequencies were obtained from HEC-HMS modeling analysis. The Manning's value for each cross section will be estimated using engineering judgment based upon on-site investigations, local aerial photography, and previous studies. The N values used in the models must be consistent with the recommended range of values set forth in the HEC-RAS Hydraulic Reference Manual and other text books. The expansion and contraction coefficients used must be consistent with the values recommended in the HEC-RAS Hydraulic Reference Manual. Various alternative improvements such channel widening and realignment, detention basins, and control structures will be evaluated to mitigate existing flooding problem areas.
- **ORD DU/ GeoPAK Storm Sewer System Modeling Analysis.** Current storm sewer modeling programs utilized by TxDOT will be used to evaluate existing and proposed closed conduit storm sewer systems for design purposes. Results from the analysis will be used to determine the hydraulic adequacy of each storm sewer system. If flooding problems are identified, alternative improvements will be evaluated and optimized to meet the design criteria. GeoPAK Drainage & ORD-DU considers storm sewer system characteristics (pipe size, roughness, flowline

elevations, etc.), watershed and subwatershed conditions (drainage area, impervious cover, etc.), various rainfall frequencies, and tailwater conditions at the outfall of the system. The programs compute peak discharge and hydraulic gradients for storm sewer systems flow full or partially full. The modeling parameters will be supported by a geodatabase within the GIS. Storm events analyzed for storm sewer design include 2, 5, 10, 25, 50 and 100-year.

- **EPA-SWMM Dynamic Modeling.** For evaluation of complex systems (looped, inline storage integration) and extreme event analysis, the storm sewer systems will be analyzed with specialized software such as EPA-SWMM. The program allows for the analysis of ponding within the roadway in conjunction with the conveyance within the systems. Urban drainage system consists of two mutually interactive subsystems: the underground and the surface, as shown in Figure 2. The underground subsystem consists of sewer systems with manholes, inlets, pipes, and controls structures. The surface subsystem is made of channels, natural flow paths, and retention/detention basins. The EPA Storm Water Management Model (SWMM) is a dynamic rainfall-runoff simulation model it can be used for single event or long-term (continuous) simulation of runoff quantity and quality from primarily urban areas. SWMM contains a flexible set of hydraulic modeling capabilities used to route runoff and external inflows through the drainage system network of pipes, channels, storage units and diversion structures. SWMM can handle both closed conduits and open channels (manmade or natural), model special elements such as storage units, flow dividers, pumps, weirs, and orifices. Also, SWMM models various flow regimes, such as backwater, surcharging, reverse flow, and surface ponding. EPA-SWMM will be used for the complex drainage systems, such as tailwater effect conditions. Figure 12 conceptually illustrates an urban drainage system.

Environmental Constraints. A limited environmental site investigation within existing and future city boundaries and surrounding areas will be performed to identify potential environmental constraints. The resulting environmental constraints will be mapped in the project GIS workspace.

Capital Improvement Plan (CIP) Develop a CIP to give the City a tool to plan future capital improvement expenditures for storm sewers within the City. The CIP identifies the general characteristics of proposed drainage modifications or improvements required for drainage systems that are currently considered to be inadequate to meet present City storm drainage design criteria. The CIP will be developed so that the drainage improvements correspond to expansion of city boundaries and land development over the planning horizon and available funding sources. Drainage improvement projects outside the jurisdiction of the city will be identified to ensure a collaborative effort is made with other agencies. Through active coordination with these other agencies, the city will ensure that critical drainage

MANAGEMENT PLAN

Civil Systems Engineering, Inc. is experienced and capable of providing **a wide range of professional services** to the City. The combined experience of CSE includes drainage and flood control planning and design, hydrology and hydraulics, water resources systems modeling, streets and highway planning and design, environmental, storm drainage and storm water pollution prevention controls, project management and contract administration, feasibility studies, and GIS applications.

All team members under the project management of Dr. Deren Li are well versed in their responsibilities to coordinate with clients and managers to ensure that project goals are achieved, and that projects are executed in accordance with client standards and specifications; development of comprehensive plans of execution to insure tasks are sequenced properly, that resources are available as needed, and that all personnel understand what will be required to meet the goals of the project; tracking and reporting to insure that work completed is commensurate with costs incurred, and that all efforts of all personnel point directly to the goals of the project for a timely completion.

This project team consists of members who are experienced in and accustomed to meeting aggressive project schedules while producing high quality project delivery on time and on budget. The client will be regularly informed of project status via meetings and conference calls. Regular progress reports with relevant backup data and informative visual reporting will be submitted at predetermined intervals or at the request of the City. A mechanism for regular updates can be established, for example an ftp site that can regularly provide updates for the county.

CSE's experience with local, state and federal clients means that CSE inherently provides work progress, schedule, and budget summaries on an on-going basis. CSE is conditioned to regular project coordination meetings, and has already established working relationships with Hidalgo County, Hidalgo County Drainage District No.1, City of McAllen, City of Edinburg, U.S. Army Corps of Engineers, FEMA, Texas Department of Transportation, Texas Water Development Board, and International Boundary Water Commission (IBWC).

CSE has extensive experience in a variety of document standards, having performed work for diverse clients. CSE's administrative staff and key personnel are highly capable and versed in the most recent versions of Microsoft Word, Excel, PowerPoint, Project and Access.

Direct, face-to-face communication is one of the simplest means of avoiding misunderstandings during a complex project. CSE anticipates frequent meetings to cover all aspects of the project. Client communications and meetings will be managed by our Project Manager to address sudden issues of concern.

The CSE Team has significant experience in the dissemination of public information, and in harnessing public input to build consensus. CSE can create a means of delivery commensurate with expectations of the end-user, and within the resource means of the County. This could be as simple as a web-based link to a .pdf file, or as complex as interactive mapping utilities.

The experienced project management and skill set available for this project together with the QAQC framework to be used will ensure that the project remains on schedule and budget. Constant communication with the client will also be essential to success of the project.

Our project team has a wealth of **knowledge of government regulations, policies, guidelines, appropriate codes, professional standards and specifications** related to various the project phases including planning, design, and management. The following is a list of local, state and federal agencies that may require consulting and coordination:

1. Federal Emergency Management Agency (FEMA)
2. US Army Corps of Engineers (USACE)
3. Federal Highway Administration (FHWA)
4. Environmental Protection Agency (EPA)
5. U.S. Fish and Wildlife Service
6. US Coast Guard (USCG)
7. International Boundary Water Commission (IBWC)
8. Texas Department of Transportation (TxDOT)
9. Texas Parks and Wildlife Department
10. Texas Water Development Board (TWDB)
11. Texas Commission on Environmental Quality (TCEQ)
12. Texas Parks and Wildlife Department
13. Hidalgo County Drainage District No.1
14. Cities and Irrigation Districts

QUALITY ASSURANCE

CSE certifies that we have the **Ability to Meet the Project Schedule** as required by City of Edinburg. We have a well-established **QA/QC system** for all our engineering practices. Each project will be managed based on our **Project Management Guidelines for Project Managers**. For each specific project, regular project communications will be conducted through specified meetings, conference calls, and e-mails in order to meet each project objectives and ensure quality products to be delivered to the City on schedule and within budget. We have the **Ability to Commence Services Immediately** at the request of City of Pharr.

We also have a detailed contingency plan to respond to any changes of our engineering staffs. Should one of our team members not be available to complete the project, all of the rest of the team members have the experience and redundancy of skills that would be needed to complete the proposed project. The chosen team member picked to complete the project will have to be approved by the City.

CSE conducts operations based on the Code of Ethics of the Texas State Board of Registration for Professional Engineers and the Texas Board of Professional Land Surveyors. Our engineering practices have been and will be performed based on standard local, state, and federal engineering design criteria and regulations along with our sound engineering judgments.

In order to provide consistent, accurate project data, CSE will maintain a project budget and schedule in MS Project to facilitate reporting to the City of Edinburg, understand the implications of changes to elements of the work schedule and scope, coordinate project activity and maintain accountability throughout the project. CSE will provide a QA/QC plan for the City to review at the project kick-off meeting. CSE's internal filing system already offers a mechanism to record the sequence of a project, including preservation of earlier iterations and mark-ups.

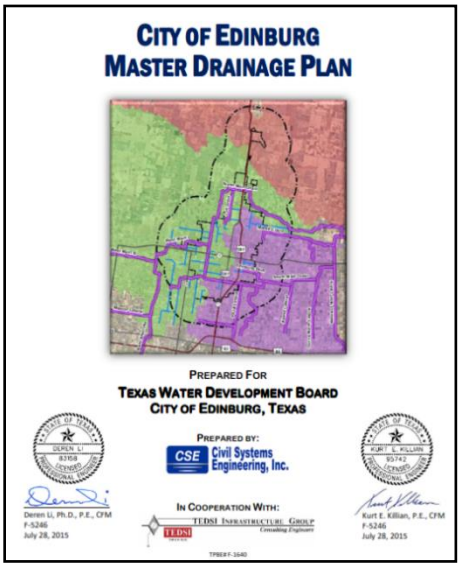
KEY PROJECTS

CSE has conducted various projects located within the Rio Grande Valley. CSE performed countywide LiDAR topographic data manipulation and processing, watershed and drainage basin delineation and hydrologic and hydraulic modeling analyses which cover the Hidalgo County. We have prepared numerous requests for Letter of Map Revisions from FEMA for various agencies and private developers within Hidalgo County. The follow is a list of projects that CSE and Staff performed in the Lower Rio Grande Valley and for other Municipalities in Texas:

- City of Harlingen HUC-10 Flood Prevention Plan for City of Harlingen & Texas Water Development Board. The project included the analysis of the Arroyo Colorado Watershed, determination of flooding, formulation of flood relief alternatives, and development of City master drainage plan. Project included 2D HEC-RAS modeling of watershed and lateral drainage areas as well as analysis of City storm sewer systems in EPA-SWMM. Alternative scenarios were developed and modeled to provide flood relief. Cost-benefit analysis was performed for each scenario.
- City of Harlingen Commerce Street roadway and drainage improvements. As part of a USDOT RAISE Grant program, CSE is developing the PS&E for the reconstruction of the 3.6 mile Commerce St. corridor. As part of the project, CSE is implementing a multi-modal concept to the roadway section as well as improving drainage, including providing a 100-year conveyance corridor for the adjacent area.
- Hidalgo County Countywide FEMA Flood Map Modernization Project for Federal Emergency Management Agency of Department of Homeland Security and Hidalgo County - The purpose of this project was to develop a digital flood insurance map (DFIRM) for the entire Hidalgo County based on new LiDAR topographic data. This project involved base map DFIRM database development, LiDAR topographic data processing, detailed hydrologic and hydraulic modeling analyses, and digital floodplain database and mapping. The project covers more than 1,850 square miles.
- Raymondville Flood Control Project for USACE and Hidalgo County Drainage District No.1 - This project was sponsored by Hidalgo County Drainage District No.1 in partnership with the U.S. Army Corps of Engineers. The purpose of this project was to formulate and design a flood control plan to divert floodwater from North Main Drain to Raymondville Drain to reduce the existing flooding problems within the urbanized areas. The project involved extensive LiDAR data processing, ArcGIS mapping, GeoHMS/HEC-HMS and GeoRAS/HEC-RAS hydrologic and hydraulic modeling for more than 800 square miles of watershed and more than 100 miles manmade drainage channels.
- City of Edinburg Master Drainage Plan for Texas Water Development Board and City of Edinburg. The purpose of this project is to develop a cost-effective master drainage plan to assist the City in planning its outfall and storm sewer systems improvements. Performed project data development such as field surveys, LiDAR processing, GIS processing and base mapping, drainage basin delineations, HEC-HMS modeling analysis, HEC-RAS modeling analysis for 49 drainage systems, and performed EPA-SWMM modeling analysis storm sewer systems.
- City of Harlingen Master Drainage Plan for City of Harlingen - Prepared a master drainage plan along with a Capital Improvement Plan (CIP) for the City of Harlingen. Performed project data development such as field surveys, LiDAR processing, GIS processing and base mapping, drainage basin delineations, HEC-HMS modeling analysis, HEC-RAS modeling analysis for 49 drainage systems, and EPA-SWMM modeling analysis for 128 storm sewer systems. Developed cost estimates for each recommended improvement, such as channel and channel crossing modification, storm sewer system improvement, and detention basin.

- La Joya Watershed Study for Hidalgo County Drainage District No. 1 - The purpose of this project was to develop a master drainage plan for the Penitas Watershed (13 square miles) to provide outfall needs for the existing and future development within the watershed. The resulting plan will be used for the District as its drainage guidance to future development.
- Mission Inlet Flood Control Project for Hidalgo County - Developed improvement plans to provide a higher level of flood protection to the Mission Inlet Watershed. Complex hydraulic modeling performed using HEC-RAS 1D/2D unsteady and PC-SWMM models. The project involves coordination with FEMA and IBWC.
- Pharr-McAllen Watershed Study for Hidalgo County and City of Pharr - The objective of this project was to perform detailed hydrologic and hydraulic modeling evaluation to demonstrate the proposed plan will not have adverse hydraulic impact on the existing hydraulic conditions along Goose Creek and its tributaries. The proposed trail included a series of concrete pavements, boardwalks, two existing bridges, and two new proposed bridges.
- SH 365/ IBTC H&H Study for Hidalgo County Regional Mobility Authority - Performed H&H study and mitigation analyses for multiple segments of the proposed SH 365/ International Bridge Trade Corridor (IBTC) highway design project and prepared hydraulic report for the study.
- SH 68 Schematic for TxDOT & Hidalgo County - Performed roadway drainage study and H&H analysis for the proposed SH 68 segments from US 83 to I-69C including bridge and cross-culvert analysis.

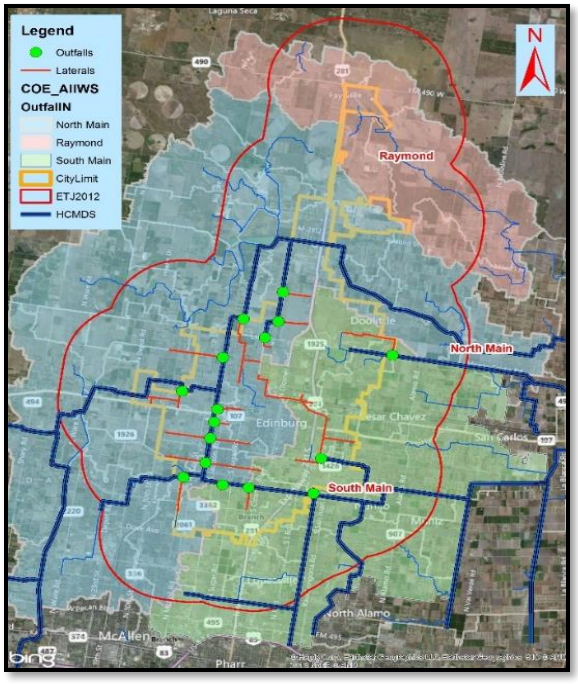
RELEVANT PROJECT EXPERIENCE



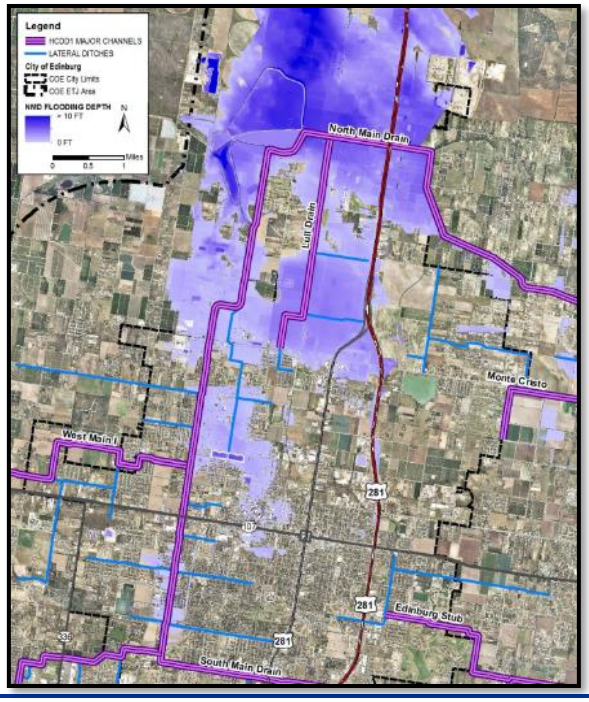
Civil Systems Engineering, Inc has performed numerous projects within the Lower Rio Grande Valley. Multiple example projects within the last 10 years include:

TWDB/ CITY OF EDINBURG MASTER DRAINAGE PLAN

TWDB GRANT
PUBLIC OUTREACH
1D/2D HEC-RAS & HEC-HMS
DRAINAGE INVENTORY
ALTERNATIVE ANALYSIS
BCA ANALYSIS



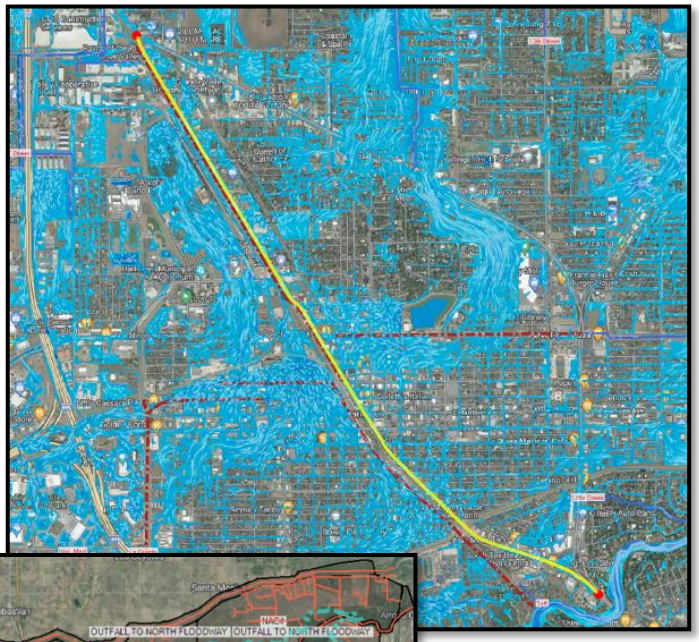
Project Location: Edinburg, TX
Client Name: City of Edinburg, Texas Water Development Board
Contact Person: Mardoqueo Hinojosa , P.E., CFM, City Engineer
Email: mhinojosa@cityofedinburg.com **Phone:** 956-388-8204



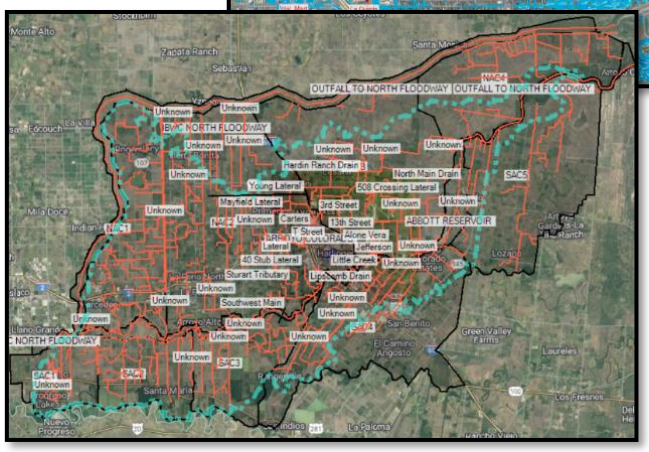
As part of a **TWDB Flood Protection Plan Grant (#1348321592)**, this Master Drainage Plan (MDP) was prepared to identify and evaluate alternative drainage strategies to mitigate/ provide relieve to the city's frequent flooding problems, and to provide the City of Edinburg a planning tool to guide and prioritize future capital expenditures for the City's drainage systems (open ditches and storm sewers) within its boundaries and ETJ. CSE Team coordinated **Public Outreach** efforts as per TWDB grant requirements, including workshops, questionnaires, developing exhibits and presenting project alternatives during **Public Meeting** at City of Edinburg.

The project consisted of inventory of existing drainage facilities, LiDAR data processing and DEM dataset development, identification of inadequacies/constraints of the existing systems, identification of flood risk prone areas, alternative analysis using **HEC-HMS** and **1D/2D unsteady HEC-RAS** modeling, GIS analysis and GIS database development for data continuity management, investigation of funding sources, and development of a capital improvement plan (CIP).

Detailed hydrologic and hydraulic modeling analyses were performed in developing the Master Drainage Plan. US Army Corps of Engineers' **HEC-HMS** and **1D/2D unsteady HEC-RAS** modeling programs were used for hydrologic and hydraulic analyses. HEC-RAS hydraulic modeling program was used to analyze water surface profiles for the existing and proposed drainage ditches and overland sheetflow patterns and inundation. HEC-HMS hydrologic modeling program was used to determine peak flows and hydrographs for drainage ditches hydraulic modeling analyses. **FEMA BCA** analysis was performed to evaluate the cost-effectiveness of alternatives and prioritize improvement projects.



CITY OF HARLINGEN HUC10 FLOOD PROTECTION PLANNING STUDY
(TEXAS WATER DEVELOPMENT BOARD GRANT PROGRAM)



Project Location: Harlingen, TX
Client Name: City of Harlingen
Contact Person: Luis Vargas, City Engineer
Email: lvargas@harlingen.tx **Phone:** 956-216-5223

CSE is currently performing the flood protection planning study to develop a watershed-based flood protection plan with various flood mitigation strategies and improvement projects that is cost-effective, permittable, acceptable, and constructible for the study area, including all political subdivisions, to mitigate/ reduce current and future flooding within the City of Harlingen and surrounding cities to provide a higher-level flood protection. The project is funded as part of a Texas Water Development Board Grant. Dr. Deren Li, CSE President, serves as project manager for this drainage study.

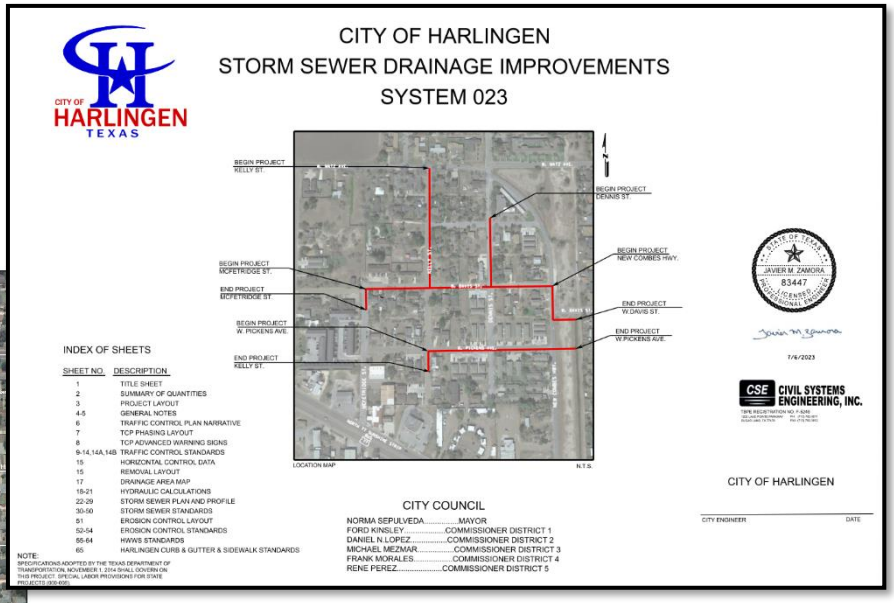
The resulting flood protection plan will provide sufficient information for the City of Harlingen and other adjacent agencies within the study area to plan, fund, and implement future drainage/ flood control projects and strategies. This proposed flood protection planning study area covers approximately 297 square miles (as shown in Figure 1 and Figure 2). The project area includes two (2) complete HUC 10 subbasins (HUC 1211020806 & 1211020807), which are designated as Middle Arroyo Colorado and Lower Arroyo Colorado subbasins, respectively, within the USGS Watershed Boundary Dataset (WBD). The study area includes approximately 50 centerline miles of the Arroyo Colorado, 25 bridge structures across the Arroyo Colorado, 325 miles of drainage ditches, approximately 960 structures/crossings, storm sewer systems, lateral ditches, irrigation canals, and other appurtenances.

Specific activities include:
Task A: Project Management
Task B: Collection and Review of Baseline Information
Task D: Field Survey
Task E: Hydrologic Model (HMS)
Task F: Hydraulic Model (1D/2D)
Task G: Levee Internal Drainage Analysis
Task H: H&H Analysis of Alternative
Task I: Benefit-Cost Analysis (BCA)
Task J: Assessment of Environmental Constraints
Task K: Collaboration with Regional FEWS
Task L: Development of FDST Inundation Map Library
Task M: Regional Framework for Localized Master Drainage Plan
Task N: Final Report
Task O: Public/Stakeholder Meetings

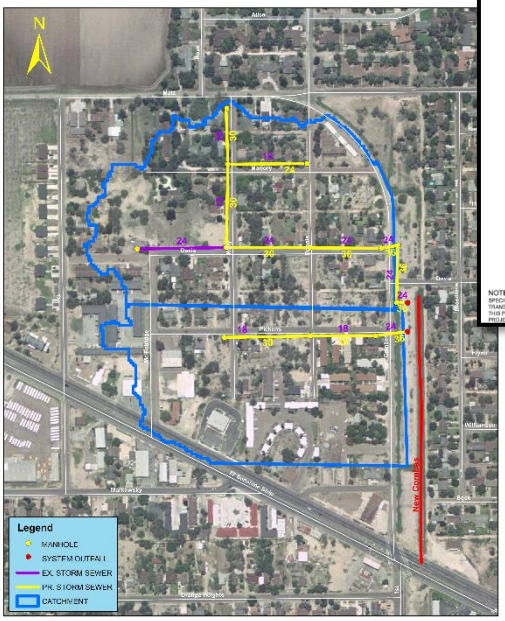
CITY OF HARLINGEN SYSTEM 023 DRAINAGE IMPROVEMENTS PS&E

Project Location: Harlingen, TX

Client Name: City of Harlingen



Contact Person: Luis Vargas, City Engineer



Email: lvargas@harlingen.tx **Phone:** 956-216-5223

Civil Systems Engineering, Inc. prepared the drainage design and PS&E documents for the System 023 drainage improvement project for the City of Harlingen. Mr. Javier Zamora served as project manager for this project, which was a part of a City of Harlingen on-call drainage contract.

The proposed project included developing the storm sewer design, traffic control, SWPPP, quantities and estimates, and bid documents for the proposed construction project. CSE coordinated utilities with the City, which required storm sewer redesign, alignment adjustments, and conflict box design to avoid the existing utilities. CSE also determined the cut-n-restore pavement design. CSE submitted 30%, 60%, 90% and final design plans as well as general notes and quantities/ estimates to the City for review. CSE also prepared the bid package for the City.

As part of the drainage design, CSE updated the original 2008 Master Drainage Plan proposed storm sewer sizes based on current City criteria, design frequency, and Atlas 14 intensities. CSE designed and refined inlet locations and sizes. CSE analyzed and designed the drainage system within GeoPAK drainage.

CITY OF HARLINGEN MASTER DRAINAGE PLAN

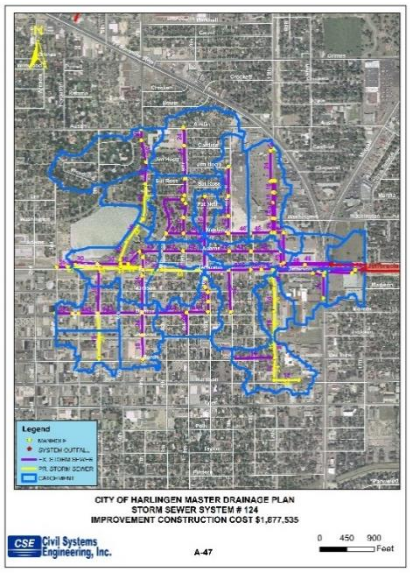
DRAINAGE INVENTORY
ALTERNATIVE ANALYSIS/ CIP
GIS DATABASE



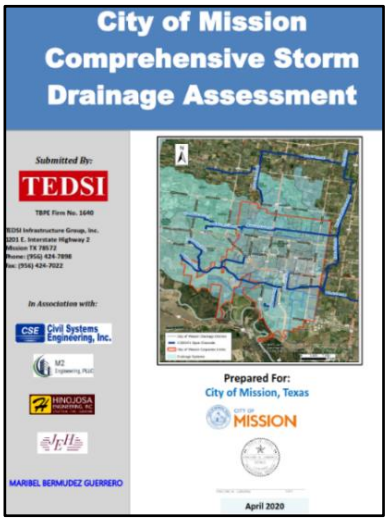
Civil Systems Engineering, Inc. prepared the **2008 Master Drainage Plan (MDP)** for the City of Harlingen. The proposed improvements to Jefferson Street Storm Sewer System for this RFQ are part of the recommendations within the MDP. The MDP was prepared to provide the City a planning tool to guide and prioritize future capital expenditures for the City's drainage systems (open ditches and storm sewers) to mitigate the existing frequent flooding that have historically occurred throughout the City and provide a higher flood protection to life, property, and infrastructure.

During MDP development, CSE performed various tasks including inventory of existing drainage facilities (as-built plans), field surveying (stream crossing structures), LiDAR data processing/DEM dataset development, identification of inadequacies/constraints of existing systems (open ditches and storm sewers), identification of flood risk prone areas, alternative analysis, capital improvement plan (CIP) development, and funding sources investigation. A total of 49 outfall systems and 128 storm sewer systems were delineated and evaluated.

The Capital Improvement Plan (CIP) documented various projects consisting of storm sewer upsizing, channel improvements, hydraulic structure replacements, and detentions. The CIP documented recommendations of a total length of 38 miles of storm sewer pipes for replacement, 16 miles of channel improvements, one detention basin, and 42 bridge/culverts expansion or replacements. The proposed improvements increase the capacity of the existing storm sewer systems and reduce overbank flooding risk along the existing channels. Based on the MDP, the City has secured millions of various Federal and/or State funding (FEMA, TDEM, CDGB, and HMGP grants) for various projects such as Jefferson Drainage Ditch, 3rd Street Drainage Ditch, 9th & 13th Storm Sewer Systems, etc.

CITY OF MISSION MASTER DRAINAGE PLAN

Project Location: Mission, TX



Client Name: City of Mission

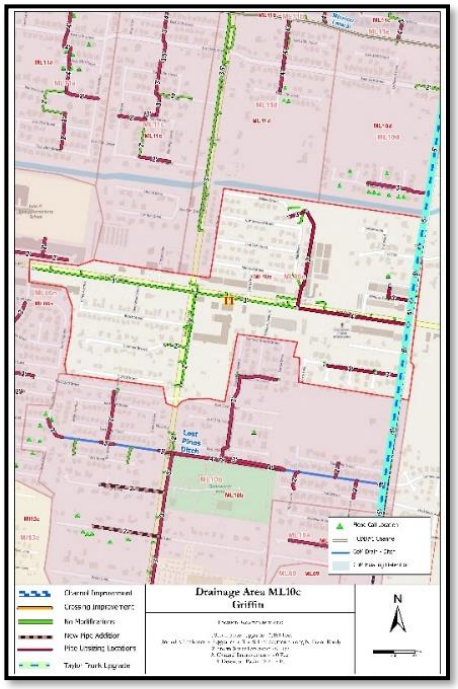
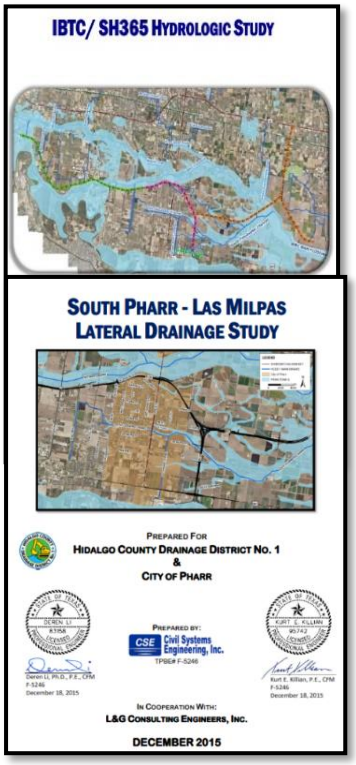
PUBLIC OUTREACH
HEC-HMS & 1D/2D HEC-RAS
1D/2D XP-SWMM
DRAINAGE INVENTORY
ALTERNATIVE ANALYSIS/ CIP
GIS DATABASE
BCA ANALYSIS



CSE developed the **City of Mission Master Drainage Plan** with detailed hydrologic and hydraulic analyses and proposed a **Capital Improvement Program (CIP)**, which included improvements to 160 miles of storm sewer mains and 36 miles of drainage ditches. Utilizing **Atlas 14 rainfall** with 2018 LiDAR-based watershed delineations, **HEC-HMS** flows were calibrated with **HEC-RAS 2D rain-on-grid** models and verified against historical flooding locations. Extensive **1D/2D XP-SWMM** modeling analyses were performed to evaluate the existing storm sewer capacity and outfall tailwater boundary conditions. No adverse impacts were performed to ensure that storm sewer improvements will not adversely impact adjacent properties. The 10-year design storm was used to ensure proposed storm sewer recommendations were effective in the future under prevailing climatic conditions. Alternative Improvements were analyzed and optimized for cost-effective flood reduction solutions.

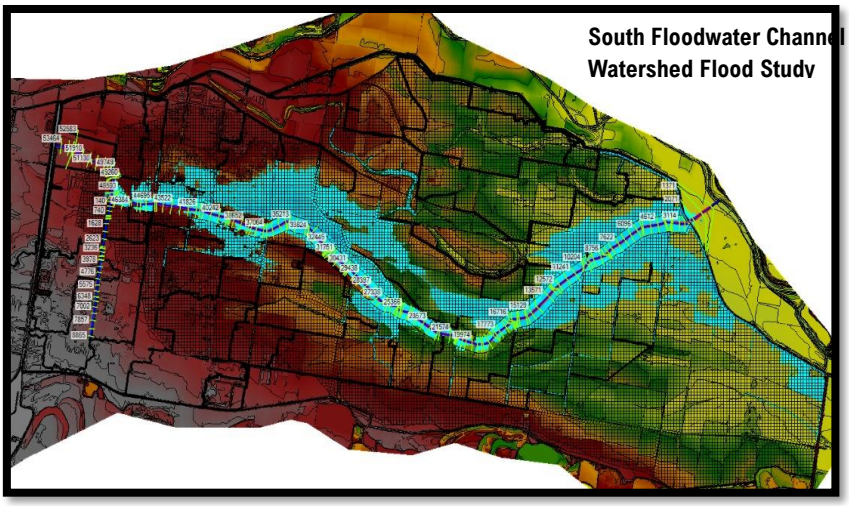
Benefit-Cost Analysis was performed based on previous experience with FEMA **BCA**, HAZUS-MH, and US Army Corps flood damage assessment (**HEC-FDA**) and feasibility studies to ensure that all benefit categories were robustly computed and accounted.

Downstream bottlenecks outside the city limits were identified for coordination with adjacent jurisdictions to improve drainage outfall tailwater conditions within city limits. Recommended projects were evaluated using **FEMA BCA** including non-structural relocation/floodplain conservation, channel improvements, regional detention, and storm sewer improvements. ArcGIS Pro was used for enhanced visualization presentation for **Public Outreach**.



FLOOD DAMAGE REDUCTION AND MITIGATION STUDIES WITHIN SOUTH FLOODWATER CHANNEL WATERSHED

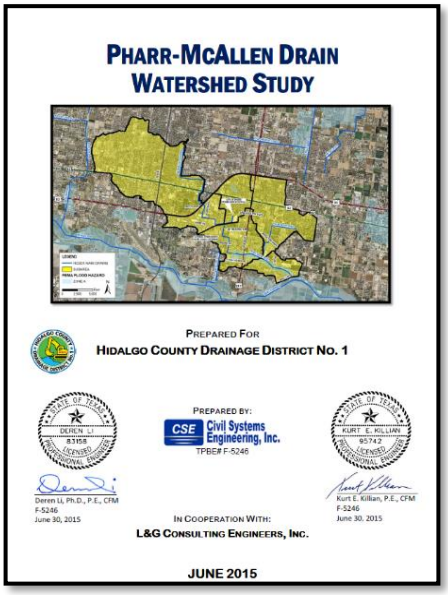
HEC-HMS & 1D/2D HEC-RAS ALTERNATIVE ANALYSIS FLOOD REDUCTION COORDINATION (HCMRA/IBWC)



Project Location: Pharr & Hidalgo County, TX
Client Name: Hidalgo County Drainage District No. 1 & Hidalgo County RMA
Contact Person: Raul Sesin, P.E., CFM, District General Manager
Email: raul.sesin@co.hidalgo.tx.us **Phone:** 956-292-7080

As part of the SH 365/ IBTC Tollroad project, the South Floodwater Channel watershed was analyzed identify and map flood risks from backwater effects of the channel, establish base condition floodplain, and evaluate improvement alternative for flood relief. The channel was analyzed to design roadway profile, crossings, and detention requirements. South Floodwater Channel (SFC) is a major outfall channel of Hidalgo County Master Drainage System. It has a watershed of approximately 36.6 square miles. SFC main stem is approximately 11 miles in length. Major tributaries within the watershed include Hidalgo Drain, Jackson Drain, and South Pharr Lateral. The overland slope of the drainage area is mild, less than 0.1 percent. Watershed's downstream portion from 'I' Road to IBWC Main Floodway are undeveloped, agricultural lands with upper portions consisting of residential and commercial developments.

CSE updated the existing HEC-HMS model developed for the FEMA County Flood Map Modernization Project developed by CSE based on new topographic data. Runoff hydrographs and peak flows were computed at various locations within the watershed. A 1D/2D unsteady HEC-RAS model was developed based on the existing 1D steady-state HEC-RAS model based on the very flat topography and the potential closure of the IBWC levee outlet floodgate at the IBWC Main Floodway confluence. This included regenerating cross-section geometry and generating 2D meshes. The model was also updated to include the outlet gated structure at the IBWC Main Floodwater Levee based on the proposed South Fork Lateral Channel construction project plans, updating the Jackson Road Bridge based on field survey, incorporating updated HEC-HMS runoff hydrographs based on Jackson Drain subarea analysis, and inclusion of the Jackson Drain proposed channel improvements as a tributary reach to South Floodwater to provide a single fully integrated watershed 1D/2D HEC-RAS model for the mainstem and tributaries. The model was calibrated against historical highwater marks and flooding extents. Floodplain was delineated based on the updated water surface elevation results from the 1D/2D RAS modeling results. With consideration of the closure potential of the outlet levee flood gates into IBWC Main Floodway during a large storm event, an all 2D rain-on-mesh model was developed to analyze the overland flow patterns, velocities and flooding areas.



CSE utilized the modeling efforts in conjunction with another Hidalgo Co. project to analyze potential drainage improvements within the City of Pharr to relieve flooding. Based on the hydraulic modeling, CSE proposed improvements of abandoned irrigation canal to serve as drainage channels for the City of Pharr within the Las Milpas area.

PHARR-MCALLEN DRAIN WATERSHED STUDY

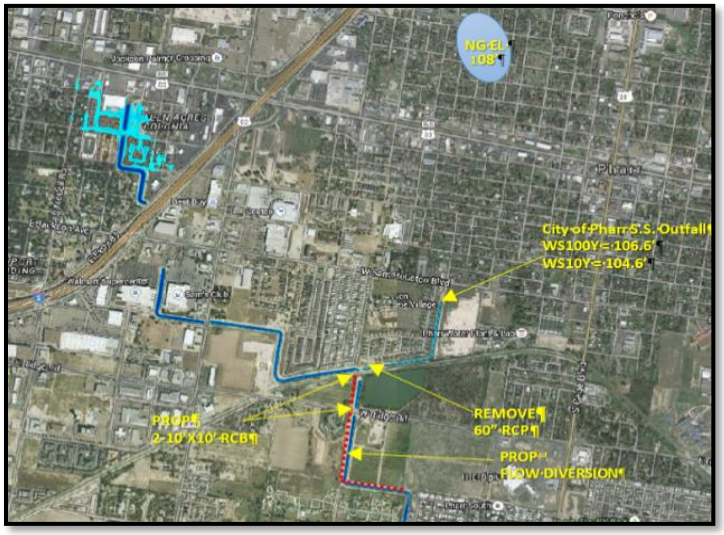
ALTERNATIVE ANALYSIS
CITY COORDINATION



Project Location: Pharr & McAllen, TX
Client Name: Hidalgo County Drainage District No. 1 & Hidalgo County RMA
Contact Person: Raul Sesin, P.E., CFM, District General Manager
Email: raul.sesin@co.hidalgo.tx.us **Phone:** 956-292-7080

CSE performed a detailed 1D/2D unsteady HEC-RAS modeling analysis to analyze the existing Pharr-McAllen Drain watershed drainage systems, identify constraints, flooding problems areas, and recommended improvements to relieve existing flooding and provide outfall capacity for the City of Pharr project area storm sewer.

Three alternatives were analyzed to determine potential water surface elevation reductions at the City of Pharr storm sewer outfall. One alternative is recommended for this project based on: 1) comparison of the water surface elevation within the Pharr Lateral at the City of Pharr storm sewer outfall and the natural ground elevation within the low-lying, flood-prone area; 2) project cost; 3) ROW needs; and 4) implementation.

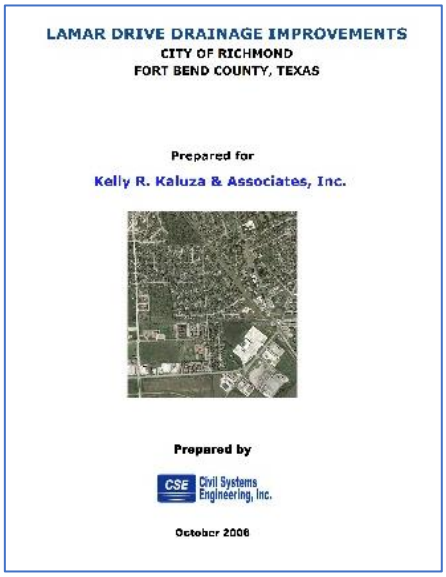
The Recommended Alternative improvements include: 1) the removal of the existing 60" RCP within the Pharr Lateral; 2) replacing the existing 2- 8' x 7' RCB culvert structures at HCID#2 canal with 2- 10' x 10' RCB; and 3) replacing the existing 2- 8' x 7' RCB culvert structures at Ridge Road with 2- 10' x 10' RCB. The proposed alternative would reduce the water surface elevations at the City outfall by approximately 5 and 8 feet for the 100-year and 10-year storm events, respectively. The proposed alternative water surface elevations would be at or near the existing natural ground elevations within the project low-lying area for the 100-year event and approximately 3 feet lower than natural ground for the 10-year event.

LAMAR DRIVE IMPROVEMENTS

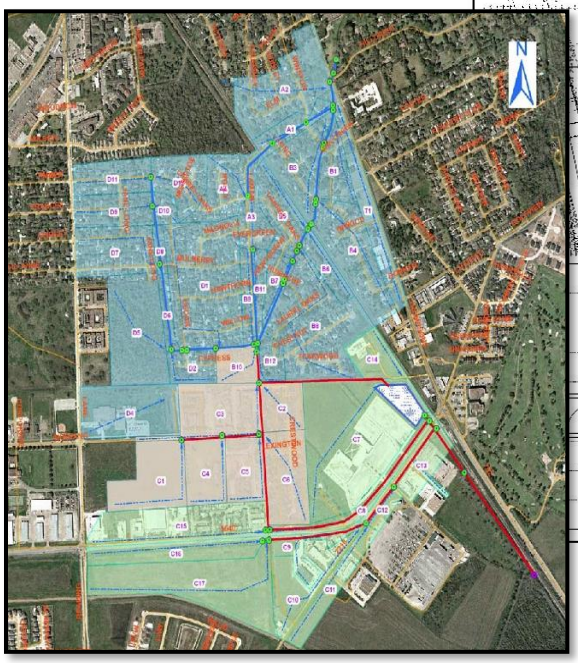
Project Location: City of Richmond, TX

Client Name: City of Richmond/ Kelly Kaluza Engineering, Inc.

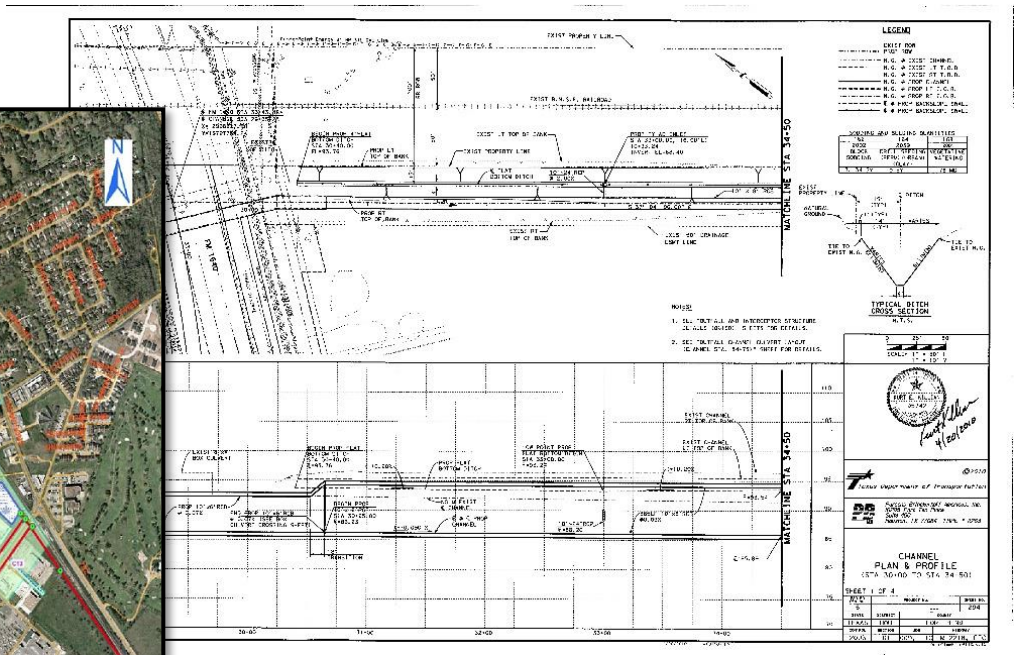
Contact Person: Richard Stolleis, P.E., Project Manager



Email: rstolleis@kaluzainc.com **Phone:** 281-341-0808



The City of Richmond proposes to widen Lamar Drive from FM 1640 (Avenue I) to FM 762 (Thompson Road) in Fort Bend County, Texas. The roadway improvement is approximately 5,200 feet in length. The width of the existing asphalt roadway is 24 feet within a 60 to 70 feet right of way. The drainage facilities for the existing roadway consist of roadside ditches and closed conduit storm sewer systems, outfall into an open channel (an unnamed tributary to Rabbs Bayou).



The purpose of this study was to perform a hydrologic and hydraulic analysis to identify potential hydraulic impacts of the proposed Lamar Dive Roadway Improvements and to optimize a drainage improvement plan to minimize the potential hydraulic impacts with detention and storm sewer system and to provide flood reduction to the existing subdivision along the roadway segment.

CSE performed detailed H&H modeling analysis using **HEC-HMS** and **XP-SWMM** based on field survey and LiDAR data for the project. Alternative improvements were evaluated to determine potential hydraulic impacts (peak discharges and water surface elevations) of proposed improvements. Preferred alternative was optimized. PS&E package was prepared. Significant collaboration was made with TxDOT Houston District on utilization of TxDOT proposed detention basin for FM 2218 and FM 1640 project.

ROAD RECONSTRUCTION
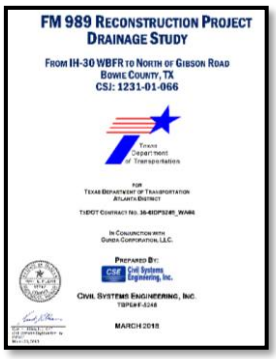
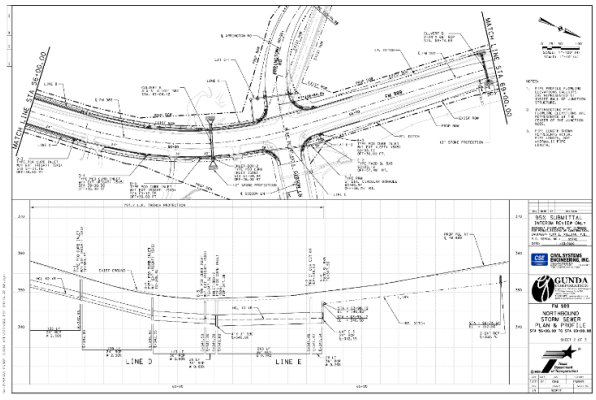
STORM SEWER DESIGN
DETENTION BASIN DESIGN
EPA-SWMM, ArcGIS
HEC-RAS, HEC-HMS
GEOPAK DRAINAGE

CSE served as hydraulic lead for the drainage impact analysis, drainage/storm sewer and detention basin design and PS&E for the proposed 3.0-mi. road widening of an existing 2-lane rural highway to 4-lane suburban collector with curb-n-gutter and roadside ditch sections. CSE designed the proposed storm sewer system, cross-drainage, driveway pipes and roadside ditches, and detention basins. Four storm sewers with inline mitigation were designed using EPA-SWMM and MicroStation GeoPAK Drainage. Cross-culverts (5 pipes and 2 bridge-class culverts at FEMA crossings) were designed using HY-8 and HEC-RAS. Detention basins (4 ponds) were designed using OpenRoads 3D modeling tools.





FM 989 RECONSTRUCTION DESIGN

Project Location: Texarkana, Bowie County, TX
Client Name: Texas Department of Transportation, (TxDOT) – Atlanta District
Contact Person: Katie Martin, Project Manager

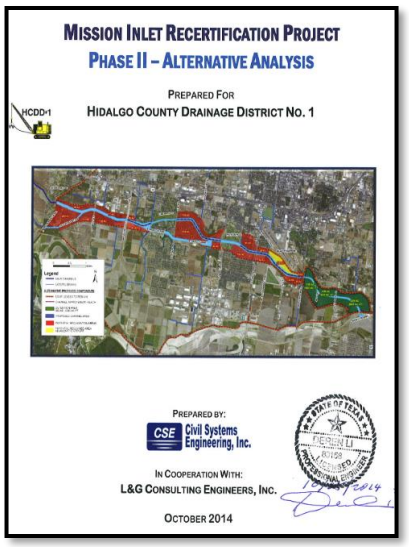
SCHEMATIC DESIGN
ROAD RECONSTRUCTION
DRAINAGE DESIGN
STREAM HYDRAULICS

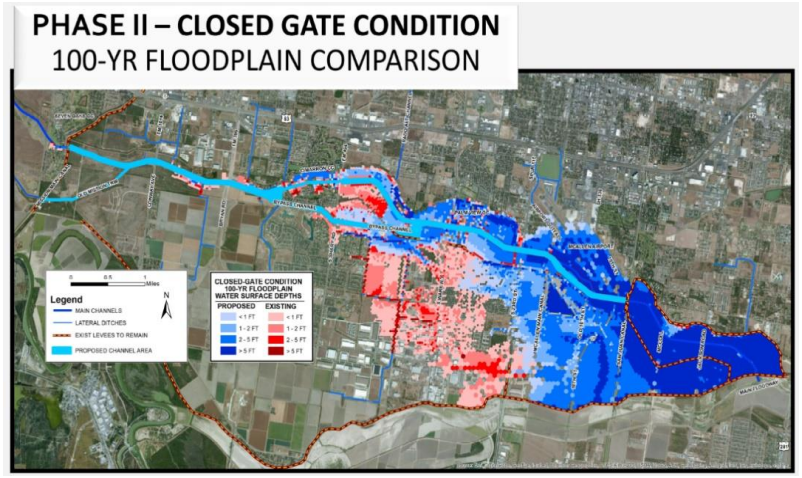
Mr. Kyle Bertrand served as project manager for the schematic/ PS&E for this conversion of rural highway to urban collector. Mr. Kurt Killian served as hydraulic lead for the drainage impact analysis and drainage/storm sewer design and PS&E for the proposed 0.5-mi. road widening of an existing 2-lane rural highway to 4-lane suburban collector with curb-n-gutter and roadside ditches. CSE performed the hydraulic analysis and design for the three (3) cross-drainage structures and proposed storm sewer systems. Proposed storm sewer systems were designed using MicroStation GeoPAK Drainage. Cross-culverts were analyzed using HEC-RAS and FHWA HY-8. Runoff impact analysis was performed using EPA-SWMM; mitigation measures included enlarged storm sewer pipes with restrictor pipes.



MISSION INLET FLOOD CHANNEL RECERTIFICATION/CLOMR

Project Location: Hidalgo County, & Cities of McAllen and Mission
Client Name: Hidalgo County Drainage District No. 1
Contact Person: Godfrey Garza Jr. CFM (former General Manager, HCDD1)
Email: godfrey@ggconsulting.us
Phone: 956-227-3623

HEC-HMS & 1D/2D HEC-RAS
1D/2D PC-SWMM
FLOODPLAIN MAPPING
ALTERNATIVE ANALYSIS
IBWC COORDINATION
FEMA CLOMR SUBMITTAL



CSE performed a watershed study and flood reduction plan for the 11-mile, 1400-ft wide leveed Mission Inlet (MI) channel and prepared a FEMA request for **CLOMR** for the plan. MI watershed covers 115 sq.mi. and outfalls into the **IBWC Main Floodway** through a levee gated-control structure. The scope of the project included detailed **HEC-HMS** and **HEC-RAS 1D/2D** modeling analysis to evaluate alternative improvement plans to provide relief to the the existing developments along the channel, provide opportunities to reclaim existing floodplain areas for future development, increase outfall channel capacities, and develop detailed flood risk maps as part of a FEMA CLOMR.

The entire watershed was restudied based on new LiDAR DEM and survey data. ArcHydro and HEC-GeoHMS along ArcGIS Spatial Analyst and 3D Analyst Extensions were used for watershed delineations and HEC-HMS modeling analysis. The MI channel was hydraulically modeled using **1D/2D PC-SWMM**, and 1D/2D unsteady HEC-RAS model. GeoRAS was used to extract channel geometric data for the pilot channel within the levee system. 2D meshes were developed behind the levee systems. The H&H analysis established existing water surface (WSEL) and floodplain and evaluated proposed channel and structure improvement alternatives.

The 1D/2D RAS model used 1D unsteady calculations for the MI pilot channel and crossing structures and 2D calculations for the overbank. The 2D mesh were generated from LiDAR and connected to the 1D components by lateral weirs. The 1D/2D RAS analysis was able to account for the substantial storage within the channel overbanks, identified locations of flow leaving the leveed system. The resulting WSEL and flood risk area are more representative to the flood channel system with the 1D/2D HEC-RAS modeling approach. The resulting 1D/2D RAS model resulted in a decrease in WSEL by 2 feet and flows by 20-percent at the outlet structure. To develop a cost-effective practical implementable alternative plan, considerations of future development, seven (7) TxDOT highway crossings, McAllen Airport expansion, levee relocations, and IBWC Floodway operations were incorporated in the plan.

To ensure the project completed within budget and schedule, CSE has effective communication and coordination plans. QA/QC procedures were implemented to ensure quality deliverable at each milestone of the project. Automated massive geospatial data processing was implemented based on similar project experience. Parallel computers were used for multiple alternative evaluations and modifications.

MEDICAL COMPLEX AND S. PERSIMMON STREET PAVING, DRAINAGE, AND UTILITIES

Project Location: Tomball, Texas
Client Name: City of Tomball
Reference Name: Drew Huffman, Public Works Director
Reference Email: dhuffman@tomballtx.org
Reference Phone: 281-290-1466

Mr. Bertrand, CSE PM, served as Project Manager to provide conceptual planning, preliminary design, final design, and construction phase services for planned construction of Medical Complex Segment 4B from the intersection of South Persimmon and Agg Road to Hufsmith-Kohrville and South Persimmon from the existing South Persimmon/Agg Road intersection south to the Tomball Business & Technology Park at the M118 Channel. Construction includes the southern portion of the ultimate boulevard roadway of Medical Complex, sidewalk, city utility extensions, and 41' back-to-back concrete roadway with curb for South Persimmon. Utility extensions included 12-inch water main, 10 to 12-inch sanitary sewer, and 4 to 6-inch natural gas, 24-inch RCP to I0-ft x 8-ft dual RCB storm sewer in accordance with the City of Tomball Infrastructure Master Plan. Additional program management oversight responsibilities included survey services, geotechnical investigation, environmental assessment, hydraulic impact study, and special licenses and permits, traffic control plan (TCP), signal design, storm water quality management plan (SWQP), and land acquisition assistance. The project includes approximately 2,000 linear feet of roadway, storm sewer, and extensions of water line, gas line, sanitary sewer, and storm sewer.

Original Consultant Fee authorized $3.3M, Finished Under Budget $2.5M (Approx. $800K Under Budget)

Construction Contract Awarded $13.98M, Final Pay App $13.70M (Approx $200K Under Budget)

CITY OF HUNTSVILLE CDBG SIDEWALK AND LIGHTING IMPROVEMENTS PROJECT

Project Location: Huntsville, Texas
Client Name: City of Huntsville
Reference Name: Mark McClure, Professional Engineer
Reference Email: mmclure@huntsvilletx.org
Reference Phone: 936-294-5789

The City of Huntsville applied for the **CDBG grant** administered through the **Texas Department of Agriculture (TDA)** for a sidewalk replacement grant. As part of the process the City of Huntsville advertised a request for qualifications for professional engineering services and **CSE staff** was selected. The project included pedestrian improvements along each side of 12th Street from State Highway 75 (Sam Houston Avenue) to Avenue M within the city. The improvements include approximately 480 LF of stamped concrete sidewalk on each side, curb and gutter, ADA accessible ramps, patterned crosswalks, driveway adjustments, utility adjustments, and pedestrian lighting improvements. The design plans and construction documents had to be prepared in compliance with federal requirements for CDBG and TDA.

Consultant Fee authorized $66.5K

Construction Contract Awarded $279.9K, Final Pay App $266.8K (Approx $13K Under Budget)

TOMBALL EDC BUSINESS & TECHNOLOGY PARK

Project Location: Tomball, Texas
Client Name: Tomball Economic Development Corporation
Reference Name: Kelly Violette CEcD, PCED, ACIP, Executive Director
Reference Email: kviolette@tomballtxedc.org
Reference Phone: 281-401-4086

The Tomball Business & Technology Park is a ninety-seven and a half (97.5) acre property generally located in the northwestern corner of Hufsmith-Kohrville and Holderrieth Road within the City of Tomball, TX.

Mr. Bertrand, CSE PM, served as Project Manager and worked with the TEDC from inception through final construction of public infrastructure to serve the Business Park to include multiple construction packages, individually bid and simultaneously constructed. Facilities constructed, both on-site and off-site included but were not limited to roadways, drainage systems, public water distribution, sanitary sewer, natural gas, pavement markings, traffic signalization, SW3P, TCP.

The team coordinated with pipelines companies and governmental agencies to resolve contamination and conflict issues on the site which resulted in cost saving for the project. Other cost savings for the project were achieved during construction through good working relationships with the Contractors to provide value engineering solutions and negotiated for detention excavation that saved approx. $2.5M in construction costs. As a result the project was completed below initial contract amounts and under budget. **Project Consultant Fees $810K, Project Construction (Infrastructure) $7.6M**

Mr. Bertrand has served as the TEDC Engineer since 2011 to provide program management, project feasibilty, private utility and pipeline coordination, development consultation, etc. for coordination with Real Estate Brokers, Attorneys, Developers, Businesses, and potential buyers.

SECTION II – TEAM MEMBER QUALIFICATIONS & EXPERIENCE

CSE ORGANIZATION CHART

Our project manager and key engineering staff are shown on the **Organization Chart.** Our combined team members posse a full range of extensive engineering experience and depth of education. Each of our team members has his/her personal commitment to our clients' projects every day. Our responsiveness to unique client needs and interests is what differentiates our work and the valued results we deliver.

CIVIL SYSTEMS ENGINEERING, INC.
TEAM ORGANIZATIONAL CHART

Resume of Project Manager and Key Personnel

DEREN LI, PH.D, P.E., D.WRE

Principal -- Hydrologist

EDUCATION

Doctor of Philosophy in Civil and Environmental Engineering, Utah State University, 1991

Master of Science in Civil Engineering, Beijing Institute of Water Resources and Hydropower, 1985

Bachelor of Science in Civil Engineering, North China Institute of Water Resources and Hydropower, 1982

PROFESSIONAL LICENSING

Professional Engineer: Texas (83158)

AREAS OF PRACTICE

Hydrology & Hydraulics, Flood Damage Mitigation, Stormwater/ Drainage, Engineering/Design, GIS

SOFTWARE

1D/2D HEC-RAS, HEC-HMS, HEC-1, HEC-2, WSP2, PeakQ, HEC-SSP, 1D/2D XP-SWMM, PC-SWMM, EPA-SWMM, WinStorm, TR-20, ArcGIS, HEC-GeoRAS, ArcHydro, HEC-GeoHMS, FEMA BCA

Dr. Li has over 33 years of extensive experience in water resources engineering planning, design, and management, including watershed study, master drainage planning, flood damage reduction/mitigation study, floodplain and mapping study, urban stormwater drainage systems modeling and design, bridge/culvert H&H modeling and design, bridge scour analysis, ArcGIS, water supply systems modeling and design, river/reservoir systems modeling and water rights analysis. He is proficient with the latest H&H software including HEC-HMS, 1D/2D unsteady HEC-RAS, EPA-SWMM, XP-SWMM, and PC-SWMM. He is very familiar with FEMA, TWDB, TDEM, TCEQ, and USACE policies and regulations.

REPRESENTATIVE EXPERIENCE

- ***City of Harlingen HUC10 Flood Protectino Planning Study (Texas Water Development Board Grant Program) for City of Harlingen, TX, 2022-2024.*** Dr. Li served as PM for the flood protection planning study to develop a watershed-based flood protection plan with flood mitigation and improvement projects. The study also includes an update to City's master drainage plan. He managed and performed the project development tasks, developed detailed hydrologic and hydraulic models, including the latest 2D HEC-RAS modeling technology.
- ***City of Harlingen Master Drainage Plan for City of Harlingen, TX, 2008.*** Dr. Li served as PM for the City's Master Drainage Plan (MDP) and Capital Improvement Plan (CIP) project. He managed and performed the project development tasks, including coordination and collaboration with the City and CCDD5, drainage infrastructure inventory, field survey, LiDAR processing, GIS and base mapping, drainage basin delineations, HEC-HMS and HEC-RAS modeling for 49 drainage outfall channel systems. He used EPA-SWMM to analyze 128 underground storm sewer systems. Cost estimates were developed for each recommended improvement (channel improvements, detention basin, crossing replacements, and storm sewer improvements). The MDP was developed to provide guidance for the City to implement drainage improvements as part of a CIP program to relieve existing flooding and future development. With the MDP, the City has secured millions Federal/State funding (FEMA, TDEM, CDBG) for various projects such as Jefferson Drainage Ditch, Jefferson St, 3rd Street Drainage Ditch, 9th & 13th Storm Sewer Systems.
- ***City of Edinburg Master Drainage Plan, City of Edinburg and TWDB, 2015.*** Dr. Li lead the H&H team for development of master drainage plan (MDP) for the City's outfall channel system improvements. The project was a part of a *TWDB Flood Protection Plan Grant No. 13483221592*. Dr. Li managed the H&H team and identified flooding risk areas within the City. He evaluated and recommended alternative improvements to provide relief/reduction of flooding with a minimum 25-year level of protection. The study tasks included LiDAR and survey data GIS processing, user-defined unit hydrograph computations, HEC-HMS, 1D steady HEC-RAS, and 1D/2D unsteady HEC-RAS modeling analysis. ArcHydro and GeoHEC-HMS were used for drainage delineations and GeoHEC-RAS was used for RAS model development. Hydrologic and watershed parameters were estimated. Areas of flood prone concern were identified based on information and recorded flood data. Dr. Li developed a prioritization criteria matrix for the FEMA BCA alternative analyses based on flood reduction benefit and estimated construction cost. The USACE HEC-FDA program in conjunction with the HEC-RAS multiple frequency water surface elevation results was used to determine the expected annual flood damage reduction benefit for each studied outfall system. The project assumptions, findings, and recommended alternatives were presented to the public during various public meetings and provided to the City and TWDB within a sealed report.

- ***Jefferson Drainage Ditch Improvement Project, City of Harlingen, 2012.*** Dr. Li assisted the City to apply for *Hazard Mitigation Grant Program (HMGP)* as part of *FEMA/ TDEM* disaster funding, approx. $1.725M. Dr. Li also served as PM for the PS&E preparation of the proposed Jefferson Drainage outfall channel improvements based on COH Master Drainage Plan. PS&E consisted of hydraulic design, cross-culverts, channel riprap, traffic control, SW3P, earth work quantities, project estimates, and project manual.
- ***FEMA Hidalgo County Texas Countywide Flood Map Modernization Program, FEMA and Hidalgo County.*** Dr. Li served as PM to develop a digital flood insurance rate map (DFIRM) for the entire Hidalgo County based on high resolution LIDAR topo, survey data, and detailed HEC-HMS & HEC-RAS modeling. He developed base map DFIRM database and digital topographic data based on FEMA guidelines and specifications for Flood Hazard Mapping Partners. He delineated and analyzed the entire 1,600 sq. mile county drainage areas and developed hydraulic models and flood hazard mapping for 10 streams. During the project development, Dr. Li wrote a technical write paper *"Recommended Hydrologic Modeling Approach for Hidalgo County,"* which has been generally adopted as the hydrologic methodology within LRGV region.
- ***Regional Water Supply Facility Plan, HCDD1 & TWDB, Hidalgo County, TX 2011.*** Dr. Li served as PM for the grant application and resulting feasibility study for the identification and evaluation of potential sites for diversion, storage and treatment of diverted drainage water as an alternative water source to supply treated water to areas within Hidalgo County. The project funded under *TWDB Contract No. 0804830848*. It included TCEQ Water Availability Model (WAM) modeling and Water Rights coordination. *TCEQ/TWDB WAM model* was used to quantify water availability within the Main Floodwater Channel watershed and develop water conservation strategies to maximize the utilization of stormwater/floodwater for beneficial uses. Dr. Li updated based on TWDB coordination, TCEQ Water Rights comments, and public meeting inputs.
- ***SH 365/ IBTC H&H Study, Hidalgo County Regional Mobility Authority, Hidalgo Co. TX 2015. –*** Dr. Li served as GEC Hydrology lead to analyze proposed storm sewer and design mitigation measures for the proposed SH 365/ International Bridge Trade Corridor (IBTC) highway project. He developed EPA-SWMM models for the highway's multiple segments drainage systems including storm sewers, roadside ditches, and outfall channels. He analyzed and designed inline ditch storage, detention basins, and inline channel storage using EPA-SWMM to route runoff hydrographs for existing and proposed conditions.
- ***City of Bryan Storm Sewer Modeling and Infrastructure Mapping Project ($1,000,000 fee), Brazos County, TX.*** Dr. Li served as PM to develop a citywide storm sewer system master plan to assist the City staff in its future storm drainage systems and floodplain management, as well as its NPDES Phase II compliance. The scope of services of this project included GPS and Total Stations field surveying, conditions assessments (manholes, inlets, sewers, stream crossings, and open channels), GIS/mapping using GeoMedia Professional and Arc GIS, database creation, XP-SWMM hydrologic and hydraulic modeling, and capital improvement plan. To supplement the field survey data, GeoPak software was used to cut stream cross sections through DTM analysis. To have a consistent hydrologic and hydraulic analysis methodology for its future projects, a systematic approach was developed for hydrologic analysis, from rainfall distribution to runoff generation for various storm events. The project included two phases: 12 sq. miles and 32 sq. miles.
- ***Drainage Design for the Cameron Park Road Improvement Project, Cameron County, TX, TxDOT Pharr District*** – Dr. Li performed the hydraulic modeling the proposed 7.5 miles of road improvements using WinStorm program. The storm sewer design was based on TxDOT Hydraulic Design Manual.
- ***Drainage Impact Analysis for Holmes Road Reconstruction (Main Street Split to Kirby Drive), City of Houston*** – Dr. Li performed a drainage impact analysis and storm sewer design using HouStorm and EPA-SWMM. The storm sewer design, in conjunction within inline and basin mitigation measures, was sized to meet City criteria and avoid runoff impacts to receiving outfall ditch.

KURT KILLIAN, P.E., CFM

SENIOR HYDRAULIC ENGINEER

Mr. Killian has over 28 years of specialized expertise in water resources engineering includes hydrologic and hydraulic modeling, hydraulic design, floodplain analyses, mapping, and management, master drainage planning, flood insurance studies and map revisions, drainage design/PS&E, and GIS applications. His background consists of water resource analysis and modeling, stormwater design, and government employment, including Harris County Flood Control District. He is adept at all levels of modeling methods & software from 1D steady to 2D unsteady state modeling as well as current software, criteria, and design standards.

REPRESENTATIVE EXPERIENCE

City of Harlingen HUC10 Flood Protectino Planning Study (Texas Water Development Board Grant Program) for City of Harlingen, TX, 2022-2024. Mr. Killian serves as Lead Technical Engineer for the flood protection planning study to develop a watershed-based flood protection plan with flood mitigation and improvement projects. The study also includes an update to City's master drainage plan. He managed and performed the project development tasks, developed detailed hydrologic and hydraulic models, including the latest 2D HEC-RAS modeling technology. He also has developed storm sewer models using SWMM to analyze and proposed improvements to the City's internal drainage systems.

City of Harlingen Master Drainage Plan, Harlingen, TX, 2008. Mr. Killian served as lead hydraulic engineer for the City's Master Drainage Plan (MDP) and Capital Improvement Plan (CIP) project. He performed data development of field survey, LiDAR processing, GIS and base mapping, drainage basin delineations, HEC-HMS and HEC-RAS modeling for 49 drainage outfall channel systems, and EPA-SWMM modeling analysis for 128 storm sewer systems. He developed cost estimates for each recommended improvement, such as channel, basin, crossing replacements, and storm sewer improvements. The MDP was developed to provide guidance for the City to implement drainage improvements as part of a CIP program to relieve existing flooding and future development. With the MDP, the City has secured millions Federal/State funding (FEMA, TDEM, CDBG) for various projects such as Jefferson Drainage Ditch, Jefferson St, 3rd Street Drainage Ditch, 9th & 13th Storm Sewer Systems.

City of Harlingen System 023 Drainage Improvement PS&E, Harlingen TX 2022-2023. Mr. Killian served as lead drainage engineer for the proposed storm sewer improvement project. He delineated drainage areas and computed flows based on current COH criteria and Atlas 14 rainfall. He updated the 2008 MDP proposed system based on the updated flows. He refined inlet locations and system sizes. Developed the design and adjusted alignments to minimize impacts to existing utilities. He analyzed the proposed system within EPA-SWMM to ensure capacity and extreme event conveyance. He presented the design within PS&E package.

City of Edinburg Master Drainage Plan, City of Edinburg and TWDB, 2015. TWDB Flood Protection Plan Grant (#13483221592). Mr. Killian performed the hydrology and hydraulic modeling to develop a master drainage plan for the City of Edinburg. The project was to determine proposed improvements to existing outfall channel systems to relieve

frequent flooding within the City. Kurt used LiDAR and GIS tools to delineate drainage areas. He performed HEC-HMS to determine runoff flows, and 1D/2D HEC-RAS modeling analysis for each outfall channel. He developed alternatives for each drainage outfall system to improve conveyance and relieve flooding and decrease storm sewer tailwaters.

Tomball Master Drainage Plan, City of Tomball, Texas, 2023-2024. Kurt serves as Project Manager and lead hydraulic engineer for the update of the City of Tomball master drainage plan (MDP). The MDP included updating basin and subbasin drainage areas, hydrologic parameters and flows, and hydraulic analyses of channels and storm sewer systems. Kurt performed SWMM analyses of storm sewer systems and HEC-RAS analyses for the channel systems. He also performed a detailed, city-wide 2D HEC-RAS modeling to determine the overland sheetflow conditions, overflow locations, and ponding within the city. He developed proposed improvement plans to relieve existing flooding and provide drainage for future infrastructure projects and development. He also updated the City's GIS system for drainage to incorporate recent drainage projects and development as well as developed an impact fee layer for the City to track payments.

SH 365/ IBTC H&H Study, Hidalgo County Regional Mobility Authority, Hidalgo Co. TX 2015. – Mr. Killian served as drainage lead to analyze proposed storm sewer and design mitigation measures for multiple segments of the proposed SH 365/ International Bridge Trade Corridor (IBTC) highway project. He developed EPA-SWMM models for the highway's storm sewer and roadside ditches to design the system sizes and analyze potential runoff impacts. He designed inline ditch storage, detention basins, and inline outfall channel storage using EPA-SWMM and 1D/2D unsteady HEC-RAS to route runoff hydrographs for existing and proposed conditions. He designed cross-culverts and outfalls into IBWC Main Floodway.

SH 107 Reconstruction, Combes, TX, TxDOT Pharr District. Kurt performed the drainage design and runoff impact analysis for the proposed road widening from BS 77 to US 77. The proposed design included a curb-n-gutter section with storm sewer. Kurt delineated drainage areas, computed flows and runoff hydrographs, designed the road storm sewer system and two outfall storm sewers to the receiving CCDD#5 Wilson Tract Main Ditch. He used GeoPak Drainage and WinStorm for storm sewer design and EPA-SWMM to analyze the systems for runoff impacts and mitigation measures, which included enlarging the outfall trunklines for inline storage.

FM 949 Schematic/ PS&E Widening Project, Texarkana, TX, TxDOT Atlanta District. Drainage/ H&H TL for urban highway widening including drainage impact study, drainage and storm sewer design and PS&E. He delineated drainage areas, computed flows, calculated outfall channel WSEL using HEC-RAS, and design storm sewer pipes and inlets using Geopak Drainage. He used EPA-SWMM to compute runoff impacts and design inline mitigation by using enlarged storm pipes with restrictors. He coordinated the design the adjacent highway segments and developed the drainage PS&E.

SWTP 72" Water Line Project Drainage Study, City of Houston, 2016. As part of a City of Houston (COH) waterline replacement project, Kurt performed the drainage analysis and design for storm sewer improvements within the project area. The improvements were based on the COH master drainage plan and were sized using HouStorm and EPA-SWMM softwares. The proposed storm sewer was design for 2-year storm with a 100-year HGL in-ROW. EPA-SWMM was used to analyze 100-year event to ensure no downstream flow impacts to the receiving systems and to the final outfall into HCFCD . The storm sewer systems ranged in size from 24" to 72" RCP.

Elysian Viaduct Improvements, Drainage Impact Study, TxDOT Houston District: As hydrologic studies and complex hydraulic task lead, Kurt performed an impact and mitigation analysis and hydraulic stream analysis for the proposed roadway widening and bridge replacement of Elysian Viaduct in downtown Houston. The project involved the widening and realignment of the existing roadway and the replacement of three bridges crossing Buffalo Bayou – a 400-foot wide, 60,000 cfs FEMA studied stream. Kurt also performed a hydraulic bridge impact analysis using the effective HEC-RAS model and GeoHEC-RAS with GIS to cut cross-sections and map the floodplain. Kurt produced drainage area maps and hydraulic data sheets. Kurt performed a scour analysis of the proposed bridge crossings using TxDOT and FHWA HEC-18 methodologies and HEC-RAS output. In addition, Kurt performed the preliminary storm sewer sizing, runoff impact analysis, and mitigation determination due to the roadway improvements. Kurt proposed mitigation measures included inline storage within the storm sewer system with restrictor outfalls.

KYLE BERTRAND, PE

PROJECT MANAGER

Mr. Kyle Bertrand, P.E. has over forty (40) years of experience in civil engineering design, construction document preparation, and project management for transportation, infrastructure, and land and site development projects throughout Texas and Southern Louisiana. He has served as project manager and senior project engineer on complex projects and sites within these disciplines that have required emphasis on cost, aesthetics, environmental issues and concerns, as well as construction phasing and constructability, and multi-agency coordination. Mr. Bertrand has coordinated the requirements of governmental agencies to obtain necessary permitting and approvals while meeting the project goals.

REPRESENTATIVE EXPERIENCE

City of Tomball Infrastructure Master Plan Update, Tomball Texas - Mr. Bertrand served as the project manager for the update of City's Infrastructure Master Plan, which included Major Thoroughfare Plan Update services and utility and drainage impact fees which the City utilizes for capital improvements. Mr. Bertrand led the effort that reviewed all the planned roadway, hike & bike projects by City of Tomball and other agencies within City of Tomball. As part of this effort, he led the team that analyzed the existing HGAC travel demand model for years 2018 and 2035 to update the Major Thoroughfare Plan and Hike and Bike Master Plan to guide City of Tomball in their CIP development and manage the growth. Mr. Bertrand also assisted the City of Tomball in scoping projects, cost estimating, and programming of various projects which was included on the City of Tomball Capital Improvement Program.

City of Montgomery Downtown Design and Streetscape Improvements Plan, Montgomery, TX. Project manager for the City of Montgomery Downtown Design and Streetscape Improvements Plan. Assisted the City of Montgomery and Montgomery Economic Development Corporation with the development of a master plan for the Historic Downtown Montgomery to enhance pedestrian safety and mobility, improve functionality for events and commence, aesthetic enhancement, and necessary infrastructure improvements.

Tomball Economic Development Corporation (TEDC), Business & Technology Park, Tomball, TX. PM for development of a 100-acre tract as a business and technology for the TEDC from inception through construction. Tasks included the feasibility studies, conceptually planning and estimates, coordination with private utilities and pipelines, management of design team including survey, environmental, geotechnical, materials testing, landscape architecture, coordination with local, county, and state public agencies, and support with purchase negotiations. Civil design included primary infrastructure including storm sewer 24"- 10'x8' RCB, sanitary sewer 8"-18", 12" waterline with appurtenances, 4" natural gas, roadway, drainage channel, an offsite detention basin (approx. 50 acres), roadway widening, traffic control, traffic signals. The project was bid in multiple construction packages, with simultaneous installations, for which full construction management services were provided. This included managing the TEDC landscape architect for entryway landscaping and monument signage, including a mailbox canopy with pedestrian access.

City of Houston Roadway and Drainage Improvement Projects - Project Manager for several projects consisting of reconstruction or a new roadway ranging from two lanes to six lanes in configuration including improvements to drainage, all public utilities and some private utilities. The lengths of projects have ranged from 4,000 LF to over two miles. Prominent projects include the following:

- Buffalo Speedway, West Airport to Holmes Road
- Sherwood Forest Area Drainage and Street Improvements
- South Post Oak Road Reconstruction Project
- Kirby Drive Paving and Drainage from Westheimer to Richmond

M121W Channel & M500 Detention Basin, Tomball, TX – Project Manager for the design and construction of the M121W channel and the M500 detention basin. Tasks included field survey, traffic control plan, construction documents, utility coordination, and preparation of storm water quality plan, preparation of storm water pollution prevention plan (SW3P), and construction administration. The project was separated into multiple construction packages to better facilitate progress and required extensive coordination with the USACE, Harris County, and multiple pipeline companies.

Improvements for Channel M118 along Tomball Business & Technology Park, Tomball, TX - Project Manager for the design, construction phase engineering, construction management, and construction inspection services for improvements for Channel M118 immediately west of the newly developed Tomball Business & Technology Park. The improvements included channel improvements north of Holderrieth Road, a detention basin, and a new box culvert crossing and transition in conjunction with improvements of Holderrieth Road for south access/egress for the Business Park.

Burleson Street Culvert Replacement Project at Unnamed Tributary of Little Sandy Creek, Brenham, TX – Served as project manager and lead designer for GUNDA engaged by the City of Brenham to determine a viable solution for Burleson Street and culvert that was washed out during the **April 2016 Storm Event (DR-4269)** and damaged again during the **May 2016 Storm Event (DR-4272)**. The original 84" CMP crossing, which were replaced by City with 2-72" CMP after the April 2016 storm, were damaged during the May 2016 storm. Assisted the City with applying for a **FEMA Hazard Mitigation Grant**, which was awarded. Evaluated multiple alternatives based on design frequency, constructability, and cost and recommended a single-span bridge to provide the desired level of service and help mitigate future damages to the roadway. Finalized the bridge design and erosion protection, which included concrete lining of the side slopes and abutments under the bridge and tie-backs, as well as rock riprap upstream and downstream of the concrete lining. GUNDA completed the crossing PS&E and assisted the City with completing the FEMA documentation and cost-estimates required for the grant funding.

City of Tomball Roadway and Drainage Improvement Projects, Tomball, Texas. Project Manager for several projects consisting of reconstruction of roadways ranging from two lanes to six lanes including improvements to drainage and public utilities. The lengths of projects have ranged from 2,000 LF to over two miles. Prominent projects include the following:

- Brown Road Phase 1, Quinn Road to SH 249
- FM 2920 Schematic Drawing and HGAC TIP Application
- Brown Road Phase 2, Quinn Road to Baker Road
- Multiple Pedestrian Improvement Projects throughout the City

Medical Complex Segment 4B & South Persimmon, City of Tomball, Texas. Project Manager for conceptual planning, preliminary design, final design, and construction phase services Medical Complex Segment 4B from the intersection of South Persimmon and Agg Road to Hufsmith-Kohrville and South Persimmon from the existing South Persimmon/Agg Road intersection south to the Tomball Business & Technology Park at the M118 Channel. Construction included the ultimate boulevard roadway of Medical Complex, sidewalk, city utility extensions, and 41' back-to back concrete roadway with curb for South Persimmon. Utility extensions included 12-inch water main, 10- and 12- inch sanitary sewer, and 4-inch natural gas, 24-inch RCP to I0'x8' RCB storm sewer in accordance with the City's Infrastructure Master Plan. Additional PM oversight responsibilities included survey services, geotechnical investigation, environmental assessment, hydraulic impact study, and special licenses and permits, traffic control plan (TCP), storm water quality management plan (SWQMP), and land acquisition assistance.

City of Tomball Alley Improvements, Tomball, TX. Project Manager for the Alley Improvements for the City of

Tomball. This includes conceptual layouts, design, construction documents, and construction management for a capital improvement project for the City of Tomball based on a recommendation from the City of Tomball Livable Centers Downtown Plan. This project includes reconstruction of alleyways within the Old Downtown Area to better facilitate vehicular and pedestrian use. The improvements will provide sidewalks to complete pedestrian connectivity north and south of the alleyways. This project is currently under design and layouts are being approved by the City of Tomball City Council and Tomball Economic Development Corporation.

Montgomery County Precinct 2 Mobility Study, Montgomery County, TX – Mr. Bertrand served as Project Manager for the Montgomery County Precinct 2 Mobility Study. This project is in coordination with HGAC. The project is to address the challenges and opportunities available to improve mobility within Montgomery County Precinct 2. This will include high level analysis to assess the primary study area and detailed analysis to address areas of interest. This project includes public involvement, analysis, recommendation, implementation, and identifying funding opportunities.

Barbee Street at Unnamed Tributary to Hog Branch, Brenham, TX - Served as project manager and lead designer engaged by the City of Brenham after the **May 2016 floods (DR-4272)**. The Barbee St. culvert and roadway were undermined and exposed. The storm event caused severe erosion of channel embankment, banks and invert; degradation of channel flowline; undermining of existing road subsurface and embankment; undermining of downstream culvert headwall; and erosion around upstream sanitary manhole. The erosion resulted in a scour hole approximately 10-15 feet below the downstream culvert flowline and leaving the pavement and headwall unsupported. During **Hurricane Harvey (DR-4332)** the erosion under the roadway and culverts worsened. City of Brenham decided to contract emergency road repairs. GUNDA worked to get the design finalized and bid under emergency procurement procedures. With the contractors input and the design finalized the City saved over $200,000.

City of Huntsville CDBG Sidewalk and Lighting Improvements Project, Huntsville, TX. Project manager for the City of Huntsville CDBG Sidewalk and Lighting Improvements Project. The City of Huntsville applied for the CDBG grant administered through the Texas Department of Agriculture (TDA) for a sidewalk replacement grant. The project included pedestrian improvements along each side of 12th Street from State Highway 75 (Sam Houston Avenue) to Avenue M within the city. The improvements include approximately 480 LF of stamped concrete sidewalk on each side, curb and gutter, ADA accessible ramps, crosswalks, driveway adjustments, utility adjustments, and pedestrian lighting improvements. The design plans and construction documents prepared in compliance with federal requirements for CDBG and TDA.

EDUCATION

Bachelor of Science,
Civil Engineering,
Texas A&I University, 1990

PROFESSIONAL LICENSING

Professional Engineer:
Texas (83447)

Certified Floodplain Manager
National (2135-11N)

AREAS OF PRACTICE

Hydraulics, Stormwater/ Drainage Engineering/Design, Roadway Design, SW3P, Construction Management

SOFTWARE

MicroStation, OpenRoads, GeoPAK, ArcGIS, WinStorm, EPA-SWMM, XP-SWMM, HEC-RAS, HEC-HMS

JAVIER M. ZAMORA, P.E., CFM

SENIOR TRANSPORTATION ENGINEER

Mr. Zamora has 30 years of engineering experience, 6 years at City of Harlingen as City Engineer and Public Works Director, 8 years at Texas Department of Transportation (TxDOT) Houston District and 14 years with consulting engineering firms. With the TxDOT Houston District Design Section & Consultant Contracts he was responsible for PS&E preparation, hydraulic design and analysis of storm sewer, cross culverts, channels, scour analysis, and storm water pollution prevention plans. Mr. Zamora also managed, reviewed and supervised the respective design consultants as well as coordinating with outside local entities. As former City of Harlingen Public Works Director/City Engineer, Mr. Zamora is keenly aware of flood issues affecting the City and surrounding areas. Additionally, as a resident of Harlingen, Javier provides additional insight into the issues and perspectives that face the City and its citizens.

REPRESENTATIVE EXPERIENCE

Jefferson Drainage Ditch Construction, Harlingen, Texas, 2010. Mr. Zamora oversaw the construction management of a concrete lined drainage ditch project. He managed construction inspection, work change orders, and coordination with the construction company. The project was completed on time and within budget.

"M" and "L" Street Drainage Storm Sewer Project, City of Harlingen, Texas, 2012. Mr. Zamora oversaw the design and construction management of the these drainage projects, which consisted of installing 24", 30", and 48" reinforced concrete pipe, storm inlets, and drainage manholes. Roadway was completely overlaid with asphalt.

Buchanan, Hays, Johnson, and "M" St. Storm Sewer Drainage Project, City of Harlingen, 2012-2014. Mr. Zamora oversaw the design and construction management of these drainage projects, which consisted of five phases and installed 24", 30", and 48" RCP's, storm inlets, and drainage manholes.

3rd Street Drainage Ditch Imp. Project, City of Harlingen, 2014. Mr. Zamora oversaw the design and construction management of this drainage project, consisting of an existing ditch to provide more drainage capacity and to install a 10'x10' RCB at 3rd Street Drainage Ditch and North Loop 499.

Roadway Design/Construction Management of roadways throughout the City of Harlingen. Mr. Zamora oversaw the design and construction management of several roadways within the City of Harlingen, including: East Treasure Hills Drive, Dixieland Road/Bass Pro Drive, Stuart Place Road, Brazil Road, Teege Road, Bass Pro West Road, Wilson Road, Halpin Road, Crockett Road, Spur 54 Roadway Schematic,

City of Harlingen Master Drainage Plan, Cameron County, Texas, for City of Harlingen, 2008. Mr. Zamora performed project data collection and inventory of drainage infrastructures, drainage basin delineations, HEC-HMS and HEC-RAS modeling analysis for drainage channels, and EPA-SWMM modeling analysis for existing and proposed storm sewer systems. Performed alternative formulation, evaluation, and recommendation. Estimates for proposed storm sewer system improvement construction costs.

Hidalgo County North Main Drain Improvement Project, Hidalgo County, Texas, for Hidalgo County Drainage District No.1, 2007. Mr. Zamora identified alternative improvement plans to a segment of North Main Drain beginning upstream at Monte Christo Toad (FM 1925) and ending at Caliche Road just south of Edinburg Lake to provide higher flood protection to surrounding areas along the channel reach without adverse impacts downstream. Mr. Zamora inputted field surveying into hydraulic models, performed HEC-HMS & HEC-RAS modeling, cost estimates, and final design.

Drainage Impact Analysis for Holmes Road Reconstruction (Main Street Split to Kirby Drive) HCFCD Unit C161-00-00, Harris County, Texas, 2008. Perform a storm sewer/ drainage design and runoff impact analysis to meet City of Houston criteria and ensure no impacts to receiving Harris County Flood Control District (HCFCD) drainage ditch HCFCD C161-00-00 as part of the roadway and drainage improvement project. The detailed H&H modeling analysis utilized EPA-SWMM, HEC-RAS, and HEC-HMS to model the roadway storm sewer, outfall ditch and computed flows. Javier determined impacts, evaluated, and optimized drainage improvements to HCFCD Unit C161-00-00 to provide inline storage volume to mitigate potential runoff impacts and provide outfall depth for the project storm sewer.

Hydrologic and Hydraulic Study for Fulshear Creek Crossing Subdivision, Fort Bend County, Texas, 2008. Performed a detailed hydrologic and hydraulic analysis to assist the design engineer (Robert T. Deden Services) in determining runoff impacts to Fulshear Creek, a tributary to the Brazos River, for the proposed development. Drainage and mitigation design met Fort Bend County Drainage District's no flow and water surface impact criteria. Specific tasks included: GIS drainage basin delineations using LiDAR data, hydrologic and watershed parameters estimations, HEC-HMS hydrologic modeling, and HEC-RAS hydraulic modeling.

Hydrologic and Hydraulic Impact Analysis for Five Off-system Bridge Replacements within Harris, Montgomery, and Galveston Counties, for TxDOT Houston District. Evaluated the hydrologic and hydraulic conditions at each bridge and recommended alternative designs to ensure proposed bridge replacement met TxDOT and local design criteria with no adverse impacts upstream and downstream of the bridges. Used HEC-HMS and HEC-RAS for flow and water surface elevation computations.

ADDITIONAL PS&E EXPERIENCE PROJECTS

- ✓ Johnson Avenue Drainage Improvement Project - City of Harlingen 2011-2012
- ✓ Post Oak Boulevard - From Richmond Ave. to IH 610 Richmond Ave. Exit, ($585K construction)
- ✓ West Green Boulevard - From IH 10 to Park Row, ($675K construction)
- ✓ FM 517 - From Owens Rd. to FM 3436, TxDOT ($7.0M construction)
- ✓ W. Airport Blvd Reconstruction PS&E – From Chimney Rock to Hiram Clarke Rd., TxDOT ($7.0M construction)
- ✓ W. Airport Blvd Reconstruction PS&E – From Hiram Clarke Rd. to FM 521, TxDOT ($4.8M construction)
- ✓ US 59 - (Connector D) IH 610 at US 59 Interchange, TxDOT ($2.0M construction)
- ✓ IH 45 - From FM 1488 to South of Crighton Rd., TxDOT ($9.5M construction)
- ✓ FM 528 - From Winding Way to West Nasa Blvd., TxDOT ($15.0M construction)
- ✓ IH 610 (Depressed Frtg. Roads) at US 59 Interchange, TxDOT ($25M construction)
- ✓ SH 6 - From West of FM 521 to Brazoria County Line, TxDOT ($18.0M construction)
- ✓ US 59 - From North of Greens Rd. to North of Lee Rd., TxDOT ($17.7M construction)
- ✓ US 59 - From North of Lee Rd. to Greens Bayou, TxDOT ($32.2M construction)

EDUCATION

Bachelor of Science in Civil Engineering, University of Houston, 2002

Masters of Civil Engineering, University of Houston, 2010

PROFESSIONAL LICENSING

Professional Engineer: Texas (98292)

Certified Floodplain Manager National (1269-07N)

AREAS OF PRACTICE

Hydrology & Hydraulics, Stormwater/ Drainage Design, GIS

SOFTWARE

1D/2D HEC-RAS, HEC-HMS, HEC-1, HEC-2, WSP2, PeakQ, HEC-SSP, 1D/2D XP-SWMM, PC-SWMM, EPA-SWMM, OpenRoads, SUDA, Geopak Drainage, WinStorm, TR-20, ArcGIS, HEC-GeoRAS, ArcHydro, HEC-GeoHMS, FEMA BCA, HEC-FDA

JAMES C. HATHORN, P.E., CFM

SENIOR HYDRAULIC ENGINEER

Mr. Hathorn has over 22 years of specialized expertise in water resources engineering includes hydrologic and hydraulic modeling, hydraulic design, floodplain analyses, mapping, and management, master drainage planning, flood insurance studies and map revisions, drainage design/PS&E, and GIS applications. His background consists of water resource analysis and modeling, stormwater design, and government employment, including Harris County Flood Control District. He is adept at all levels of modeling methods & software from 1D steady to 2D unsteady state modeling as well as current software, criteria, and design standards.

REPRESENTATIVE EXPERIENCE

IH-30 Canyon Reconstruction, Dallas, TX, TxDOT Dallas District, 2020-2021. Drainage designer for $450M reconstruction of interstate freeway segment from IH-45 to IH-35 in Downtown Dallas. James designed the at-grade intersecting City's street storm sewer systems within the reconstruction area of the interstate as well as the scupper inlets and bridge deck drainage for 8 City street and two railway bridge crossings. He used GeoPAK Drainage to produce the drainage design and PS&E sheets.

City of Harlingen HUC10 Flood Protectino Planning Study (Texas Water Development Board Grant Program) for City of Harlingen, TX, 2022-2024. Mr. Killian serves as Lead Technical Engineer for the flood protection planning study to develop a watershed-based flood protection plan with flood mitigation and improvement projects. The study also includes an update to City's master drainage plan. He managed and performed the project development tasks, developed detailed hydrologic and hydraulic models, including the latest 2D HEC-RAS modeling technology. He also has developed storm sewer models using SWMM to analyze and proposed improvements to the City's internal drainage systems.

City of Harlingen System 023 Drainage Improvement PS&E, Harlingen TX 2022-2023. Mr. Killian served as lead drainage engineer for the proposed storm sewer improvement project. He delineated drainage areas and computed flows based on current COH criteria and Atlas 14 rainfall. He updated the 2008 MDP proposed system based on the updated flows. He refined inlet locations and system sizes. Developed the design and adjusted alignments to minimize impacts to existing utilities. He analyzed the proposed system within EPA-SWMM to ensure capacity and extreme event conveyance. He presented the design within PS&E package.

NTE-3AN Design/Build, Fort Worth, Texas. Project Task Lead that was responsible for the drainage design and hydrologic and hydraulic analyses along IH35 and IH 820 as part of the NTE-3AN design build project. The improvements included reconstruction of the mainlanes, adding managed lanes, widening frontage roads, direct connectors, and bridge replacements. James performed storm sewer drainage design utilizing GeoPak Drainage, culvert design and analysis using HEC-RAS, runoff impact analysis, and detention pond routing. James was responsible for the analysis and design of approximately 9 miles of storm sewer that ranged in size from 24" RCP to 8'x5' RCB, approximately 340 inlets, and two detention ponds. A SWMM model was created using the proposed drainage design to analyze the runoff impacts, perform the detention pond routing, and determine outfall

restrictor sizes. As drainage task lead, James was also responsible for attending weekly design coordination meetings with other discipline task leads throughout the duration of the project.

Keenan's Cutoff, Montgomery County, Texas. Drainage lead for the drainage design of storm sewers, roadside ditches, cross culverts, parallel culverts, and two detention ponds for this county road reconstruction and widening. He used GeoPak Drainage for storm sewer and inlet design and produced drainage plans sheets for the PS&E package.

Siphon Analysis for Commercial Development, Mont Belvieu, Texas – Mr. Hathorn designed a 6'x4' RCB siphon structure that served as the outfall for a proposed 37-acre commercial development in Mont Belvieu. A siphon structure was designed to avoid multiple utilities including a gas pipeline. A XP-Storm 2D model was developed to analyze the structure and the impacts on the commercial development for multiple storm frequencies. The 2D modeling also aided in optimizing the grading and drainage design.

Tomball Master Drainage Plan, City of Tomball, Texas, 2023-2024. Kurt serves as Project Manager and lead hydraulic engineer for the update of the City of Tomball master drainage plan (MDP). The MDP included updating basin and subbasin drainage areas, hydrologic parameters and flows, and hydraulic analyses of channels and storm sewer systems. Kurt performed SWMM analyses of storm sewer systems and HEC-RAS analyses for the channel systems. He also performed a detailed, city-wide 2D HEC-RAS modeling to determine the overland sheetflow conditions, overflow locations, and ponding within the city. He developed proposed improvement plans to relieve existing flooding and provide drainage for future infrastructure projects and development. He also updated the City's GIS system for drainage to incorporate recent drainage projects and development as well as developed an impact fee layer for the City to track payments.

Elysian Viaduct Improvements, Drainage Impact Study, TxDOT Houston District: As hydrologic studies and complex hydraulic task lead, Kurt performed an impact and mitigation analysis and hydraulic stream analysis for the proposed roadway widening and bridge replacement of Elysian Viaduct in downtown Houston. The project involved the widening and realignment of the existing roadway and the replacement of three bridges crossing Buffalo Bayou – a 400-foot wide, 60,000 cfs FEMA studied stream. Kurt also performed a hydraulic bridge impact analysis using the effective HEC-RAS model and GeoHEC-RAS with GIS to cut cross-sections and map the floodplain. Kurt produced drainage area maps and hydraulic data sheets. Kurt performed a scour analysis of the proposed bridge crossings using TxDOT and FHWA HEC-18 methodologies and HEC-RAS output. In addition, Kurt performed the preliminary storm sewer sizing, runoff impact analysis, and mitigation determination due to the roadway improvements. Kurt proposed mitigation measures included inline storage within the storm sewer system with restrictor outfalls.

White Oak Bayou E100-00-00 Federal Flood Control Project, Harris County Flood Control District (HCFCD), Harris County, Texas: Mr. Hathorn served as lead engineer for the PS&E preparation of approx. 66,000 feet of channel modifications along White Oak Bayou, from W. Tidwell upstream to FM 1960. Channel modification design included channel widening, transitional channel grading under 17 bridges, and replacement of approx. 320 outfall pipes, which varied in size from 24" to 8'x6' RCB. Project also included the modification of five side weir structures for regional detention basins. James used AutoDesk Civil 3D for the design and 3D terrain modeling of channel.

IH 10 from Stonewall Parkway to FM 3351, Boerne, TX, TxDOT San Antonio District (2012-2014). Drainage designer for interstate frontage roads and added ramps, including proposed inlets, storm sewers, ditch grading, proposed cross culverts, and extension of existing culverts. He created a proposed grading plan for the east & west bound frontage road bridge crossings over Leon Creek to accommodate longer bridge spans. The drainage design was performed using GEOPAK Drainage. Incorporated permanent BMP features for TCEQ Contributing Zone Plan (CZP) for Edwards Aquifer Recharge Zone requirements within the drainage design.

Various City of Houston Parks, M2L Associates, Houston, Texas. Mr. Hathorn was responsible for determining the mitigation needs and drainage design for Crain Park, Lansdale Park, Looscan Park, Meadow Creek Park, Busby Park, Forum Park, Fonde Park, Alief Community Center, and Shady Lane Park. Prepared plan sheets that included drainage area delineations, pond layout sheet and details, detention pond calculations, storm drainage design, and parking lot grading plans. James was also responsible for supporting M2L on attaining stormwater drainage permits.

EDUCATION

Bachelor of Science, Civil Engineering, Auburn University

PROFESSIONAL LICENSING

Professional Engineer: Texas (125318)

AREAS OF PRACTICE

Civil Design, Municipal Design, Private Development

PATRICK RUMMEL, P.E.

SENIOR ENGINEER

Mr. Rummel has twelve (12) years of experience with broad knowledge in a wide range of private site development, land development, industrial development, and municipal infrastructure, including roadway projects. He has proven skills in management, in-depth design, and execution of complex development projects. His expertise ranges from front-end engineering and design feasibility studies to detailed design and construction support. He has excellent communication skills and an exceptional drive to achieve a schedule and cost-effect project that will benefit any project team.

REPRESENTATIVE EXPERIENCE

City of Tomball Alley Improvements, Texas. A capital improvement project for the City of Tomball based on a recommendation provided in the Tomball Livable Centers Study to reconstruct alley ways to better facilitate vehicular and pedestrian use. The improvements include reconstruction of alley pavement to stamped-colored concrete, communal dumpster enclosures, and sidewalks to complete pedestrian connectivity north and south of the alleyways. Mr. Rummel has led the design and engineering efforts related to the conceptual layout, coordination with adjacent property owners, preparation of construction documents and cost estimate. The project is currently in the proposal process for construction.

City of Tomball Medical Complex 4B & South Persimmon Street, Texas. A capital improvement project for the City of Tomball that provided paving, drainage, and utility improvements for Medical Complex Segment 4B and South Persimmon Street. Medical Complex Boulevard connects Agg Road to Hufsmith-Kohrville Road, and South Persimmon Street is an extension from the Tomball Business and Technology Park up to Medical Complex Boulevard. Mr. Rummel led the design and engineering for the construction plans of the 2,650 LF of boulevard and 4,100 LF of S. Persimmon St. extension. The ultimate drainage design implemented relieved the northern portion of the basin by connecting it into the M118-00-00 drainage via a dual 10-foot by 8-foot reinforced concrete box system. Mr. Rummel's design included roadway geometrics, signage, pavement markings, grading, and utilities, such as water, sewer, and natural gas. Mr. Rummel coordinated with abutting private developments, future county roadway improvements, private utility companies, and local officials.

Huntsville Waters Edge Lift Station Force Main Replacement, Texas. Mr. Rummel led the design and construction phase services and preliminary engineering services for 900 LF 8-inch force main relocation for the Waters Edge Lift Station and approximately 1,550 LF sanitary sewer pipe bursting along Evergreen Drive.

Huntsville FY20-21 Sewer Rehabilitation, Texas. Mr. Rummel led the preliminary and engineering design for 3,280 linear feet of parallel sewer replacement along Tributary A. The project encompassed alternative routing analysis, utility crossings of TxDOT facilities, stream crossings, and cost estimating. Mr. Rummel is leading the design and engineering of the parallel sewer replacement along MLK Boulevard consisting of 1,125 linear feet of 8-inch sanitary sewer, pavement repair, and traffic control. The project is estimated to advertise for bid Q2 2023.

Tomball First Baptist Church Pre-Engineering, Texas. Tomball First Baptist Church plans to develop a 32-acre tract north of downtown Tomball into a proposed campus based on a site master plan. Mr. Rummel led the engineering and design efforts to provide due diligence studies and preliminary engineering services for implementation of the preliminary master plan. Mr. Rummel is also leading the engineer and design phase for implementation of Phase 1 of the development.

JDR Cable Systems Tomball Business and Technology Park Lot 6 & 7, Texas. A site development in the Tomball Business and Technology Park for a new warehouse and truck court. Mr. Rummel led and managed the preparation of construction documents necessary for design of site grading and paving, drainage, water and sanitary sewer connection to public facilities, storm water pollution prevention, and appropriate applications to obtain plan approval and construction permitting from the City of Tomball.

Upper Kirby Redevelopment Authority West Alabama Preliminary Engineering Report, Texas. Upper Kirby Tax Increment Reinvestment Zone (TIRZ) authorized a Livable Centers Study that included improvements to make the District walkable, connected, and accessible with a strong local identity. Mr. Rummel managed a team of engineers to develop a preliminary engineering report providing recommendations for the street reconstruction, storm sewer improvements, and necessary utility relocations. The report analyzed multiple alternatives for the typical cross sections with varying on-street and off-street bike paths. The project is moving into detailed design with construction beginning in 2024.

Tomball Jerry Matheson Park Master Planning and Design, Texas. Jerry Matheson Park improvements are being locally funded and applying for a TPWD grant for the implementation of a new play structure, construction of a splash pad adjacent to the existing pool, installation of walking trails, and construction of four new pickleball courts. Mr. Rummel is managing and leading a team of landscape architects, electrical, structural, and civil engineers for the park expansion. The work includes master planning and preparation of construction drawings for implementation of the first phase of the master plan.

Memorial Park Central Connector, Texas. The MPCC project is located in Memorial Park Houston, Texas. As part of a 10-year master plan, this project encompasses park redevelopment features such as a geomorphic channel, the realignment of portions of Memorial Drive, formation of two mounds that acts as an ecological land bridge to reestablish a native prairie for park users, and associated infrastructure modifications. Mr. Rummel was the project manager for a regional parking lot that served park users and future athletic events for a planned timing track. The engineering of the non-curbed, exposed aggregate facility was coordinated with owners, landscape architects, and appropriate authorities having jurisdiction.

Houston Farmers Market Redevelopment, Texas. As the civil engineering consultant for this award-winning development, Mr. Rummel was the project manager for the schematic design, detailed design, construction drawings and specifications, and construction phase services for the redevelopment of the Houston Farmer's Market. The Houston Farmer's Market is a 17 acres property located in the North Heights area. The redevelopment transformed the existing market into a multi-building complex that will provide a contemporary market experience for both vendors and users. Mr. Rummel led and managed the two-phased private site engineering and design from preliminary engineering to construction phase services.

Metropolitan Transit Authority (METRO) Northline Transit Center, Texas. The current Northline TC/HCC Station is the last terminus locations along METRO's North Corridor Light Trail Transit near Northline Commons Shopping Center. The lease is set to expire for the current transit center, construction of a new four-story transit center and parking garage is required to meet the demands of METRO customers and provide adequate parking along a designed transit corridor. Mr. Rummel is managing and leading a team of civil and traffic engineers for services including but not limited to traffic impact analysis, parking geometrics, bus terminal geometrics, grading, drainage, utility connections, coordination with private utility owners. Public pedestrian improvements along the transit corridor include connectivity and universal accessibility between the new transit center and the existing light rail station to improve METRO rider experience and pedestrian safety.

EDUCATION

Bachelor of Science,
Civil Engineering,
Texas A&M University, 2017

PROFESSIONAL LICENSING

Professional Engineer:
Texas (142649)

AREAS OF PRACTICE

Civil Design, Municipal Design, Private Development

GARRISON DAY, P.E.

PROJECT ENGINEER

Mr. Day has seveyears of experience performing roadway and drainage design for municipal and transportation projects. He has developed high level of skills using the latest 3-D CADD modeling software for civil engineering, transportation, drainage, and earthwork design projects.

REPRESENTATIVE EXPERIENCE

SH 276 Schematic and PS&E TxDOT Paris District, Quinlan Texas. Provided roadway, drainage, and SW3P design (per TxDOT standards), 3D modeling, and PSE production for 2.5-mile new location State Highway in Quinlan, Texas

FM 989 Roadway and Bridge PS&E, TxDOT Atlanta District, Texarkana, Texas. Provided roadway, drainage, and SW3P design (per TxDOT standards), 3D modeling, and PSE production for widening and raising an existing bridge over I-30 in Texarkana, Texas.

Off System Bridge Replacements PS&E, TxDOT Waco District, McLennan County, Texas. Provided roadway, drainage, and SW3P design (per TxDOT standards), 3D modeling, and PSE production for 4 off system bridge replacements.

On/Off-System Bridge Replacements PS&E, TxDOT Wichita Falls District. Provided roadway, drainage, and SW3P design (per TxDOT standards), 3D modeling, and PSE production for 3 off system and one FM roadway bridge replacements.

Channel M118 Improvements, Tomball, Texas. Design support for the design, construction phase engineering, construction management, and construction inspection services for improvements for Channel M118 immediately west of the newly developed Tomball Business & Technology Park. The improvements included channel improvements north of Holderrieth Road, a detention basin, and a new box culvert crossing and transition in conjunction with improvements of Holderrieth Road for south access/egress for the Business Park.

Channel and Drainage Storm Damage Repairs, **City of Brenham, Washington County, Texas**. Design support for the design of repairs for storm related damages sustained in April/May 2016 rain events. Repairs are designed and implemented in accordance with recommendations from a prior engineering investigation and address miscellaneous damage to drainage and other public infrastructure at sites along Higgins Branch and Hog Branch, New Year Creek watershed of the Brazos River.

Channel M121 and M500 Detention Basin, City of Tomball Texas. Assisted in the preparation of the construction documents for the channel and basin and provide construction phase services. The project begins at Theis Lane, upstream, and includes approximately 7000 LF of channel and design of finished grading of the M500 regional detention basin (approximate 65 acres).

MARTHA E. VIADA, E.I.T., CFM

Ms. Viada, is a Senior Engineer Technician with Civil Systems Engineering, Inc. (CSE) with 17 years of professional experience in civil engineering and municipal public works. Prior to joining CSE, Ms. Viada was with the City of Harlingen and served as Assistant City Engineer. Her experience in the City included preparing contract documents, managing consultants, reviewing construction plans and floodplain permits, and preparing grant applications (i.e. HMGP's). Her 12 years at the City provides a unique perspective of the drainage and flooding issues faced by the City and its citizens.

REPRESENTATIVE EXPERIENCE

Hazard Mitigation Grant Program (HMGP) Applications, Harlingen, Texas. Prepared and submitted grant applications for the City of Harlingen comprising of project writeups, cost-benefit analysis, work schedules, environmental and historical clearances (NEPA), and construction estimates. Worked with Cameron County Emergency Management and H2O Partners to develop the 2015 Hazard Mitigation Action Plan identifying projects for future funding requests and conducting public meetings.

US 281/ Texas Department of Transportation, Jack County, Texas. Several work authorizations for upgrading existing roadways to Super 2 designs, extending existing culverts, 2" overlays, and pavement markings. Worked on roadway design and calculated proposed quantities for the roadway. Coordinated with TxDOT staff and consultants to deliver the final product.

FM 2258/ Texas Department of Transportation, Johnson County, Texas. The project was a complete reconstruction and widening of the existing roadway to accommodate the increase in traffic. The project included extending existing drainage structures, roadside ditches, and signing and pavement. Worked on roadway design and calculation of proposed roadway quantities. Coordinated with TxDOT staff and consultants to deliver the final product.

Pickens Street Drainage Improvements (System 023), Harlingen, Texas. The project provided drainage improvement for the Pickens -West Davis Area. The project added increased capacity to the existing drainage system including the addition of curb inlets, concrete boxes, and pipe. Worked

University of Texas Regional Allied Health Center, Harlingen, Texas. The project consisted of designing a drainage system around the proposed building, drainage of the proposed parking structure, and utilities to the proposed building. Designed the drainage system for the proposed building and parking structure consisting of a system of grates, curb inlets, and the design of a drainage swale.

Downtown Drainage Improvements, Harlingen, Texas. Project consisted of redesigning the existing drainage system to alleviate excessive stormwater in Harlingen's Downtown area and redirected it towards an existing outfall. Modeled the proposed drainage network, analyzed the proposed system capacity, and the total flow of the system to the proposed outfall.

Primera Road Improvements, Primera, Texas. Joint project with the City of Primera and TxDOT for major road improvement, including drainage and street design. Designed, analyzed, and worked on all aspects of the PS&E; typical sections, cross sections, plans and profiles, traffic control plans, pavement markings, signing layout, SW3P plans, drainage ditches, and storm sewer systems.

Upriver Road, Corpus Christi, Texas. Joint project with Nueces County and TxDOT for design and coordination of major road improvements, including drainage, water, wastewater, sidewalks, lighting, and pavement design. Designed and analyzed drainage for culvert crossings located along the length of the project. Oversaw the drafting of the culvert plan and profile sections.

Mercedes Independent School District, Mercedes, Texas. Transportation Center – The project consisted of designing a new facility to encompass bus and vehicle parking areas, a fueling area, and a proposed maintenance building. Designed the parking lot layout to meet optimum traffic flow and a drainage system for the parking lot which included curb inlets, manholes, and a drainage swale.

ATTACHMENT B – CONFLICT OF INTEREST DISCLOSURE

CONFLICT OF INTEREST DISCLOSURE

Prospective contractors should carefully consider whether any of their activities may give rise to an improper conflict of interest situation. Conflict of interest situations that are not properly addressed can result in a loss of funding to a specific program and/or to the City of Edinburg, and in some cases can result in civil or criminal liability.

Organizations that may enter into a contract with the City of Edinburg should examine the following:

- Are any employees or board members of the organization,
  - a City of Edinburg employee or consultant who exercises program or project specific functions as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Are any immediate family members or business associates of my employees or board member's,
  - a City of Edinburg employee or consultant who participates in the City's selection or award process as part of their City position?
  - a member of a Board, Council or Committee that may participate in the City's selection or award process?
  - a City Official?

- Will any of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- Will any immediate family members or business associates of my employees or board members receive a financial interest or benefit from any project funded and administered through the City (other than employee salaries or personnel benefits)?

- To my knowledge, will my program or project have a financial effect on a City official or employee who exercises City-related functions, or an immediate family member or business associate of such person? For example, will any of these persons be receiving rental payments, other business income, or program services from my company or services offered?

If you can answer "yes" to any of these questions, it is possible that there may be a conflict of interest. You should review the rules below to determine whether an actual conflict situation is raised, and, if so, what action needs to be taken to avoid a violation of the law. You should contact City staff immediately if you suspect that there might be an issue.

Any contractor entering into an agreement with the City will be required to warrant and represent, to the best of his/her knowledge at the time the contract is executed, he/she is not aware of any improper conflict of

interest as described. Also, the contract will obligate contractors to exercise due diligence to ensure that no improper conflict situations occur during the contract.

The following Federal, State and local regulations and policies, govern projects funded through the City of Edinburg:

* 2 CFR Part 200 [Subpart B 200.112 and Subpart D 200.318]
* Texas Local Government Code Chapter 171.004
* City of Edinburg Policies & Procurement Manual

Certification:

I, the undersigned, certify and report that to the best of my knowledge,

☒ I have no conflict of interest to disclose

☐ I have the following conflict of interest to disclose:

ATTACHMENT C – GENERAL QUESTIONARE

COMPANY PROVIDING PROPOSAL GENERAL QUESTIONNAIRE

1 Name/Name of Agency/Company: Civil Systems Engineering, Inc.
(Full, correct legal name)

- Address: 1202 Lake Pointe Parkway, Sugar Land, Tx 77478
- Telephone/Fax: 713-782-3811/713-782-3812
- Email address: dli@cseengineers.com

2. Does your Company anticipate any mergers, transfer of organization ownership, management reorganization, or departure of key personnel within the next twelve (12) months that may affect the organization's ability to carry out its submittal?

3.

Yes____ No_X_

3. Is your Company authorized and/or licensed to do business in Texas?
Yes_X_ No____

4. Where is the Company's corporate headquarters located? Sugar Land, Tx

5. a. Does the Company have an office located in Edinburg, Texas?

4.

Yes____ No_X_

b. If the answer to the previous question is "yes", how long has the Company conducted business from its Edinburg office?

_____ (years) _____ (months)

c. State the number of full-time employees at the Edinburg office. _____

6. Has the Company or any of its principals been debarred or suspended from contracting with any public entity?
Yes____ No_X_

If yes, identify the public entity and the name and current phone number of a representative of the public entity familiar with the debarment or suspension, and state the reason for or circumstances surrounding the debarment or suspension, including but not limited to the period of time for such debarment or suspension. _____

7. Indicate person whom The CITY may contact concerning your submittal.

Name: Javier M. Zamora, PE, CFM
Address: 222 E. Van Buren, Harlingen, Tx 78550
Telephone: 956-564-3498
Fax: _____
Email: jzamora@cseengineers.com

8. Surety Information

Have you or the Company ever had a bond or surety instrument "called," canceled, or forfeited?
Yes ( ) No (x).
If yes, state the name of the bonding company, date, amount of bond and reason for such bond being "called," or its cancellation or forfeiture.

9. Bankruptcy Information

Have you or the Company ever been declared bankrupt or filed for protection from creditors under state or federal proceedings? Yes ( ) No (x)
If yes, state the date, court, jurisdiction, cause number, amount of liabilities and amount of assets.

10. Provide any other names under which your business has operated within the last 10 years.
None

ATTACHMENT D – LITIGATION DISCLOSURE FORM

LITIGATION DISCLOSURE FORM

Failure to fully and truthfully disclose the information required by this Litigation Disclosure form may result in the disqualification of your submittal from consideration or termination of the contract, once awarded.

1. Have you or any member of your Firm or Team to be assigned to this engagement ever been indicted or convicted of a felony or misdemeanor greater than a Class C in the last five (5) years?

   Circle One YES NO

   1 Have you or any member of your Firm or Team to be assigned to this engagement ever been terminated (for cause or otherwise) from any work being performed for the CITY or any other Federal, State or Local Government, or Private Entity?

   Circle One YES NO

3. Have you or any member of your Firm or Team to be assigned to this engagement ever been involved in any claim or litigation with the CITY or any other Federal, State or Local Government, or Private Entity during the last ten (10) years?

   Circle One YES NO

SENATE BILL 19 VERIFICATION

I, Deren Li, the undersigned representative of Civil Systems Engineering, Inc., (Company or Business name) (hereafter referred to as company) **being an adult over the age of eighteen (18) years of age, verify that the company named-above, under the provisions of Subtitle F, Title 10, Government Code Chapter 2274:**

(1) does not have a practice, policy, guidance, or directive that discriminates against a firearm entity or firearm trade association; and,

(2) will not discriminate during the term of the contract against a firearm entity or firearmtrade association.

Pursuant to Section 2274.001, Texas Government Code:

1) *"Ammunition" means a loaded cartridge case, primer, bullet, or propellant powder with or without a projectile.*

2) *"Company" means a for-profit organization, association, corporation, partnership, joint venture, limited partnership, limited liability partnership, or limited liability company, including a wholly owned subsidiary, majority-owned subsidiary, parent company, or affiliate of those entities or associations that exists to make a profit. The term does not include a sole proprietorship.*

3) *"Discriminate against a firearm entity or firearm trade association":*
   - *a) means, with respect to the entity or association, to:*
     - *i) refuse to engage in the trade of any goods or services with the entity or association based solely on its status as a firearm entity or firearm trade association;*
     - *ii) refrain from continuing an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; or*
     - *iii) terminate an existing business relationship with the entity or association based solely on its status as a firearm entity or firearm trade association; and*
   - *b) does not include:*
     - *(i) the established policies of a merchant, retail seller, or platform that restrict or prohibit the listing or selling of ammunition, firearms, or firearm accessories; and*
     - *(ii) a company 's refusal to engage in the trade of any goods or services, decision to refrain from continuing an existing business relationship, or decision to terminate an existing business relationship:*
       - *(aa) to comply with federal, state, or local law, policy, or regulationsor a directive by a regulatory agency; or*

(bb) for any traditional business reason that is specific to the customer or potential customer and not based solely on an entity 's or association 's status as a firearm entity or firearm trade association.

4) *"Firearm" means a weapon that expels a projectile by the action of explosive or expanding gases.*

5) *"Firearm accessory" means a device specifically designed or adapted to enable an individual to wear, carry, store, or mount a firearm on the individual or on a conveyance and an item used in conjunction with or mounted on a firearm that is not essential to the basic function of the firearm. The term includes a detachable firearm magazine.*

6) *"Firearm entity" means:*
   a) *firearm, firearm accessory, or ammunition manufacturer, distributor,wholesaler, supplier, or retailer; and*
   b) *a sport shooting range as defined by Section 250.001, Local Government Code.*

7) *"Firearm trade association" means any person, corporation, unincorporated association,federation, business league, or business organization that:*

   a) *is not organized or operated for profit and for which none of its net earningsinures to the benefit of any private shareholder or individual;*
   b) *has two or more firearm entities as members; and*
   c) *is exempt from federal income taxation under Section 50l(a), Internal RevenueCode of 1986, as an organization described by Section 50l(c) of that code.*

ATTACHMENT J – CONFLICTMENT OF INTEREST

CONFLICT OF INTEREST QUESTIONNAIRE

FORM CIQ

For vendor doing business with local governmental entity

This questionnaire reflects changes made to the law by H.B. 23, 84th Leg., Regular Session.

This questionnaire is being filed in accordance with Chapter 176, Local Government Code, by a vendor who has a business relationship as defined by Section 176.001(1-a) with a local governmental entity and the vendor meets requirements under Section 176.006(a).

By law this questionnaire must be filed with the records administrator of the local governmental entity not later than the 7th business day after the date the vendor becomes aware of facts that require the statement to be filed. *See* Section 176.006(a-1), Local Government Code.

A vendor commits an offense if the vendor knowingly violates Section 176.006, Local Government Code. An offense under this section is a misdemeanor.

OFFICE USE ONLY

Date Received

1 **Name of vendor who has a business relationship with local governmental entity.**

None

2 ☐ **Check this box if you are filing an update to a previously filed questionnaire.** (The law requires that you file an updated completed questionnaire with the appropriate filing authority not later than the 7th business day after the date on which you became aware that the originally filed questionnaire was incomplete or inaccurate.)

3 **Name of local government officer about whom the information is being disclosed.**

N/A

Name of Officer

4 **Describe each employment or other business relationship with the local government officer, or a family member of the officer, as described by Section 176.003(a)(2)(A). Also describe any family relationship with the local government officer. Complete subparts A and B for each employment or business relationship described. Attach additional pages to this Form CIQ as necessary.**

A. Is the local government officer or a family member of the officer receiving or likely to receive taxable income, other than investment income, from the vendor?

☐ Yes ☒ No

B. Is the vendor receiving or likely to receive taxable income, other than investment income, from or at the direction of the local government officer or a family member of the officer AND the taxable income is not received from the local governmental entity?

☐ Yes ☒ No

5 **Describe each employment or business relationship that the vendor named in Section 1 maintains with a corporation or other business entity with respect to which the local government officer serves as an officer or director, or holds an ownership interest of one percent or more.**

N/A

6 ☐ Check this box if the vendor has given the local government officer or a family member of the officer one or more gifts as described in Section 176.003(a)(2)(B), excluding gifts described in Section 176.003(a-1). N/A

Re: Statement of Qualifications for Engineering Services Rotation
RFQ No. 2024-9

CRUZ-HOGAN *Consultants, Inc.* is pleased to submit **electronically** our firm's Statement of Qualifications to perform Professional Engineering Services as part of the City of Edinburg's Engineering Services Rotation. This Statement has been organized to respond to your recent "Request for Qualifications."

CRUZ-HOGAN *Consultants, Inc.* has an intimate regional presence in this area and extensive experience in providing professional engineering services to local municipal and other governmental agencies for over 30 years. We currently provide or have provided engineering services for over 20 communities here in the Rio Grande Valley, and we have assisted many of these local governments with the planning, design, and construction phase services for their projects. Every project that CRUZ-HOGAN *Consultants, Inc.* undertakes is planned, designed, and completed with quality control by engineering personnel who have a combined 70 years of experience with public works projects.

We are currently assisting the City of Edinburg with several projects, including Water Treatment Plant Filter Improvements and the Rehabilitation of Existing Clarifiers at the Downtown Water Treatment Plant.

We are very interested in being selected to continue to provide professional engineering services for the City of Edinburg. We have reviewed the scope of work required for your projects, and we are committed to perform and complete the professional services and specific tasks required by the City in connection with the assigned projects. The engineers and support staff that will be assigned to these projects have completed many similar projects here in the Rio Grande Valley.

Finally, CRUZ-HOGAN *Consultants, Inc.* can provide the City of Edinburg with a number of advantages, which we believe to be desirable:

- Local firm with extensive experience in providing Professional Engineering Services to local City governments
- Engineering firm specializing ***only*** in public works projects
- Recent and successful completion of many roadway, water, wastewater, storm sewer, traffic, and transportation engineering for Cities, Municipalities, and Communities located in the Rio Grande Valley Area
- We have the ***Engineering and Support Staff*** immediately available for this assignment.

I certify that **no Addenda was received** and that the information contained in this Statement of Qualifications is complete and accurate, and as such, we hereby provide permission for the City of Edinburg and its representatives to contact existing and previous clients of our firm and our consultant team members for the purpose of determining performance.

We appreciate this opportunity to present this Statement to you and sincerely hope that you will select us to perform these services for the City of Edinburg. Should you have any questions, I will be the main point of contact for this RFQ:

Section I-Firm Qualifications & Experience

Section I: Firm Qualifications & Experience

Firm Introduction

CRUZ-HOGAN has an **intimate regional presence** in this area. We have assisted many cities and communities with planning, design, and construction phase services over the last 35 years. Our firm specializes in providing municipal public works type consulting engineering services to cities and other public entities. In conjunction with its predecessor firm, CEC Consulting Engineers, Inc., our firm has been in business continually since 1988 and currently has a staff of over 12 employees, including associates. The office that will be working closely with you is our office located in **McAllen, Texas.** Our firm's principals have been active in the private consulting sector for many years, collectively, providing services to clients in South Texas and surrounding areas and completing some 600 public works-type projects.

CRUZ-HOGAN has extensive experience in the following areas:

- **Flood and Storm Drainage Projects**
- **Federal, State, and County Funded Projects**
- **Flood Control Projects**
- **Roadway, Bridge, and General Design and Construction**
- **Water and Wastewater Treatment Plant Projects**
- **Sanitary Sewer Lift Station Projects**
- **Water Distribution Projects**
- **Wastewater Collection Projects**
- **Providing General Engineering Services to Local Governments**
- **GIS Mapping**

The basic principle of our firm's formation and practice is to provide complete technical and personal service to our clients and to complete projects on time and within the budgets. We herewith commit our firm to have a principal in charge of all work performed for you and to have a principal present; specifically, **Mr. Orlando Cruz, P.E.,** whenever humanly possible, at all major presentations, contract negotiations, bid openings, and other important meetings where our projects are involved.

CRUZ-HOGAN provides consulting engineering for clients with projects ranging in size from small to complex, in both natural and built environments. The firm is an organization of professional consulting engineers and engineering planners with over 80 years of combined engineering experience.

Experience in Planning, Design, and Public Works Development

During the past 35 years, the personnel of **CRUZ-HOGAN** has been involved in many comprehensive development studies that have included various planning and design elements such as population projections, land-use, thoroughfares, landfills, waterworks and sanitary sewerage systems, storm drainage, central business district, parks and recreation, zoning, subdivision regulation review, and others. We have completed planning and design projects for many cities in Texas including Alamo, Alton, Brownsville, Raymondville, Edcouch, Weslaco, San Benito, San Juan, Port Isabel, Lyford, Pharr, Mercedes, Harlingen, McAllen, Town of Laguna Vista, Town of Indian Lake, South Padre Island, Cameron County, Willacy County, Hidalgo County, and others.

CRUZ-HOGAN has the expertise, diversity, knowledge, and experience needed to handle public improvement projects. Our team has successfully completed numerous public improvement projects; therefore, our team is aware and up to date on the latest ordinances, standards, codes, regulations and requirements that are critical to a project's success.

CRUZ-HOGAN has the ability, due to the size of our current workforce, to easily schedule and accommodate any project into our current workload.

Familiarity with State and Federal Regulations

CRUZ-HOGAN has the expertise, diversity, knowledge, and experience needed to handle public improvement projects. Our team has successfully completed numerous public improvement projects; therefore, our team is aware and up to date on the latest ordinances, standards, codes, regulations and requirements that are critical to a project's success.

We are well acquainted with most of the State and federal regulations, including those of the Texas Department of Transportation, the Texas Department of Commerce, the Texas Water Development Board (TWDB), the Metropolitan Planning Organization (MPO), the Texas Commission on Environmental Quality (TCEQ), the State Board of Insurance, the Texas Commission of Fire Protection, the Fire Prevention and Engineering Bureau, the

Environmental Protection Agency, the U.S. Army Corps of Engineers, and the Department of Housing and Urban Development.

Familiarity with Funding Programs

CRUZ-HOGAN *Consultants, Inc.* is fully aware that a successful project not only relies on technical expertise but also engineers that have a thorough understanding of the funding mechanisms for each project. Our team has been involved with projects that have been funded through city bond elections, Texas Water Development Board, Federal Highway Administration funding, Hurricane Relief funding, Texas Department of Transportation Funding (categorical), FEMA funding, Private Development Funding, Pass-Through (Comprehensive Development Agreement) funding, and Community Block Grant Development funding.

As part of our services, CRUZ-HOGAN has assisted and prepared applications, exhibits, and cost estimates for obtaining funds or providing compliance with these funding programs.

Ability to Meet Schedules & Deadlines

Our firm's mission is uniquely situated to meet the needs of any project from inception to completion. With our extensively combined experience over multiple civil engineering disciplines, we are confident in our ability to provide you with a project that meets your specific requirements while also being cost effective, efficiently constructed, and easily maintained after completion. Our team is available to commence services immediately upon issuance of a notice to proceed from the Owner.

CRUZ-HOGAN's approach of designing the project for not only the needs of the client, but also from the perspective of the contractor, allows for transparent bids, less change orders, and shorter construction times. Finally, we also maintain great working relationships with professionals from other engineering disciplines to provide additional services if your project requires.

Current Workload Availability

CRUZ-HOGAN *Consultants, Inc.* currently has sufficient engineering and technical staff, resources, and capabilities to immediately commence and complete any and all work assignments. Our firm offers ***4 Registered Licensed Professional Engineers*** (PEs) and ***three offices*** here in the Rio Grande Valley and offers the flexibility to immediately respond to any project whether small, large, or on a part time bases for smaller assignments.

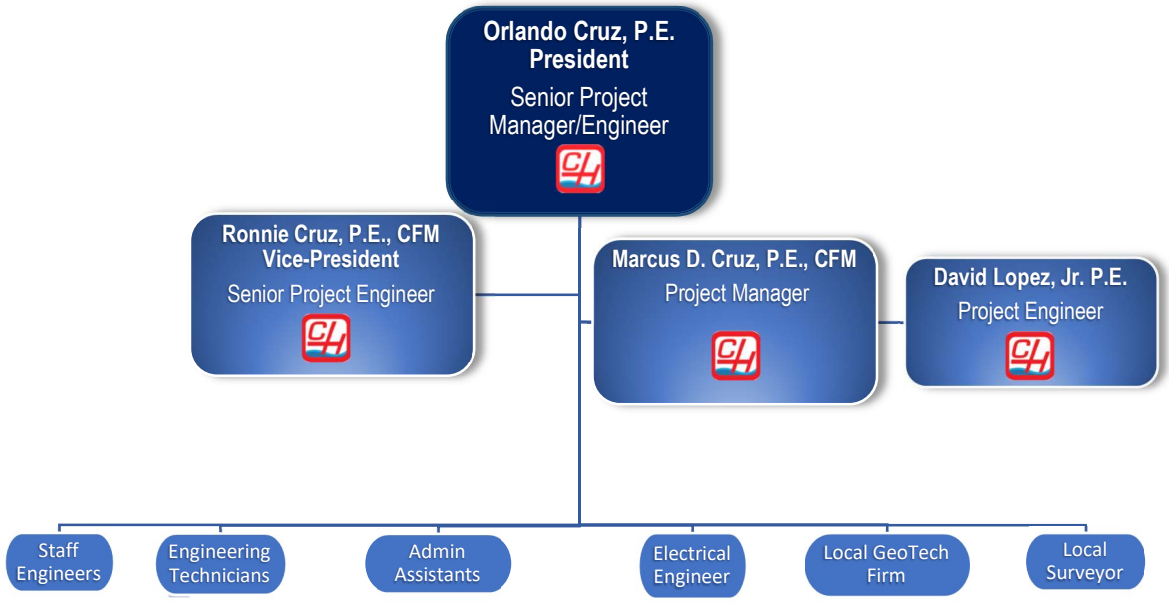
We are hereby committed and have the ability to commence services immediately after successfully negotiating a contract for engineering services.

Section II-Team Member Qualifications & Experience

Section II: Team Member Qualifications & Experience

Principal's & Engineering Staff

Full-service planning and design are the major benefit offered to the Client. The firm has on staff the qualified personnel to lead the overall management and coordination for the Client's projects, including preliminary studies, inventory and data collection, project design and reviews, local coordination, and contacts, if required, with the applicable State and Federal agencies. Our firm currently has a staff of over 12 employees, including associates.



Orlando S. Cruz, P.E., President, has been active in private consulting engineering and planning for many years. He is manager of the Weslaco & McAllen Offices and has been in charge of the design and development of numerous projects throughout the Rio Grande Valley and South Texas.

Ronnie Cruz, P.E., CFM, Vice-President, is a principal and co-manager of the McAllen office. He has managed and designed many public works projects in the South Texas area.

Marcus Cruz, P.E., CFM, is currently working as a project manager for on-going waterworks projects and other public works. He is manager of the Harlingen Office and has been in charge of the design and development of numerous projects throughout the Rio Grande Valley and South Texas.

David Lopez, Jr., P.E., is currently working as a project engineer for on-going waterworks projects and other public works. He has served as a designer, project engineer, and project manager for numerous design and construction projects in Texas.

J.A. Jones, Dallas, Texas
Design Engineer

AREAS OF EXPERTISE:

- Civil Engineering
- Storm Drainage
- Highway and Street Design
- Water and Wastewater Systems
- Water and Wastewater Treatment

Mr. Cruz is President of Cruz-Hogan Consultants, Inc. He has a vast experience in and has worked on a variety of civil engineering and related projects. He has also designed and supervised the construction of storm drainage, street pavement, water and sanitary sewer projects, and served as chief designer and project engineer for numerous projects located in South Texas. Mr. Cruz will assure the client that a high level of resources and technical expertise is maintained to ensure schedule conformance and adherence to project budget. Mr. Cruz will be available for immediate response to the client's needs at any time.

SUMMARY OF RELATED EXPERIENCE:

- 3.5 MGD Water Treatment Plant Expansion Project and Wastewater Collection System Improvements Projects; Water and Wastewater Master Plan Study, City of San Juan
- Master Planning of Water Supply, Treatment and Storage Facilities, City of San Benito
- Waterworks Planning Study, City of Alamo
- Water Transmission Main Project (16" and 20" Mains), City of Harlingen Waterworks System
- Water and Sewer line Extension Project (5 Miles), City of San Benito
- Street Improvements Projects, Cities of Harlingen, San Benito, Port Isabel, Santa Rosa
- Storm Sewer Projects, Cities of San Benito, Harlingen and Port Isabel
- Water and Sewer Colonia Project, City of Falfurrias and Brooks County
- Water Plant Expansion Project, Olmito Water Supply Corporation
- Water Plant Rehabilitation Project Including High Service Pumping and Ground Storage, City of San Benito
- Master Water and Wastewater Facilities Study and Implementation, El Jardin WSC
- New 5.50 MGD Water Treatment Plant (Consultant to Prime), City of Alamo
- New Water and Wastewater Facilities For City of San Benito
    - 6.0 MGD Water Plant
    - 2.5 MGD Sewer Plant
    - 1.0 MGD Elevated Storage
- New Sludge Dewatering Facilities, City of San Juan
- New 1.25 MGD Wastewater Treatment Plant, Olmito Water Supply Corporation
- Renovations and Improvements to Existing Wastewater Treatment Plant, City of San Juan

Texas Department of Transportation
Corpus Christi, Texas

AREAS OF EXPERTISE:
- Civil Engineering
- Highway and Street Design
- Drainage Design
- Utility Design
- Engineering Planning Studies
- Construction Development

Mr. Cruz has over 30 years in experience in the design of street and drainage plans, and water and sewer line projects. Experience prior to joining the firm includes 5 years with the Texas Department of Highways as a design and project Engineer. He designed and oversaw the construction of several street and drainage projects in the Corpus Christi area. Subsequent experience includes being City Engineer for several cities and providing required City Engineering Services. Mr. Cruz was City Engineer for the City of Alamo for 9 ½ years. His responsibilities were to advise the City on engineering issues, to design and manage projects including sewer infrastructure and roads in conjunction with TXDoT. Most recently, he had been serving as City Engineer for the City of San Juan for the last 8 years. His experience also includes the planning and design of streets and utilities for various Cities throughout the Valley and knowledge of projects involving large sewer lines while working for the McAllen Public Utility. Other experience includes streets and drainage, sewer, water, etc., for the Cities of McAllen, Alamo, San Benito, Weslaco, Donna, Falfurrias, San Juan and Harlingen.

SUMMARY OF RELATED EXPERIENCE:

- City of San Juan, TX – 3.5 MGD Water Treatment Plant Expansion Project and Wastewater Collection System Improvements Projects; Water and Wastewater Master Plan Study
- 5 MG Water Treatment Plant, City of Alamo
- 1 MG Water Ground Storage Tank, City of Alamo
- Master Planning for the Cities of Schulenburg, La Grange, Alamo, and San Juan
- Waterworks Planning for the Cities of Alamo and San Juan
- 42” Sewer line Transmission, McAllen Public Utility
- Storm Sewer Projects for the Cities of McAllen, San Juan, Alamo, and Pharr
- Water line Improvements for the Cities of Alamo, San Juan, & Weslaco, and McAllen Public Utility
- 24” Sewer Line Transmission for McAllen Public Utility
- Lift Station Design for McAllen Public Utility, Cities of Alamo and San Juan
- Street Improvements Project for the Cities of San Juan, Pharr, and Alamo

City of McAllen Public Utility 1300 Houston Ave. McAllen, Texas 78501	Marco A. Vega, P.E. General Manager (956) 681-1630 mvega@mcallen.net	• Water Distribution Improvements • Sewer Collection System Improvements • Lift Station Improvements
City of Alamo 420 N. Tower Rd. Pharr, Texas 78516	Robert Salinas City Manager (956) 787-0006 bsalinas@alamotexas.org	• Roadway & Street Improvements • Water Distribution Improvements • Storm Drainage Improvements
City of San Juan 512 S. Nebraska Ave. San Juan, Texas 78589	Benjamin Arjona City Manager (956) 223-2200 barjona@sjtx.us	• Water Treatment Plant Expansion • Master Lift Station Improvements • Roadway Improvements • Water, Wastewater, & Storm Drainage Master Plans • City Engineering Services
City of Weslaco 255 S. Kansas Ave. Weslaco, Texas 78596	Martin Garza City Manager (956) 968-3181 mgarza@weslacotx.gov	• Water Distribution Improvements • Roadway & Street Improvements • Storm Drainage Improvements

Additional Services

CRUZ-HOGAN *Consultants, Inc.* has the ability to perform the following services for Hidalgo County:

- Utility Adjustments
- Surveying
- Pre-Design
- Roadway Design
- Drainage Design
- Plans and Specifications
- Plans, Drawings, and Specifications
- Design for New Construction
- Cost Estimating
- Excavations and Trenches
- Pavements
- Water and Waste Retention/Disposal
- Parking Lot Improvements
- Environmental Regulatory Services
- Environmental Investigations

Sub-Consultants

CRUZ-HOGAN *Consultants, Inc.* has the necessary staff to perform the work required on most projects. However, our Firm must rely on sub-consultants where specific higher technical expertise is required.

The following is a list of proposed sub-consultants classified by their discipline. Service assignments will be based on the sub-consultant's availability, current workload, and schedules.

Surveying Services

CVQ Land Surveyors – McAllen
Robles & Associates PLLC – Weslaco
Aranda & Associates, Inc. – McAllen

Geotechnical and Testing Services

Millennium Engineers Group, Inc. – Pharr
Raba-Kistner Consultants, Inc. – Pharr
Terracon Consultants, Inc. – Pharr

Section V- Management & Organizational Approach

Section V: Management & Organizational Approach

Understanding of the Project

CRUZ-HOGAN *Consultants, Inc.* is pleased to submit our Statement of Qualifications to the **City of Edinburg** on our expression of sincere interest in providing Professional Engineering Services.

CRUZ-HOGAN is one of the most trusted firms in the Rio Grande Valley & South Texas and have foundational experience by providing long-term and practical projects. This is encompassed by maintaining project budgeting and construction feasibility throughout all design phases including fulfilling project milestones on time and under budget. Our local regional presence provides the understanding and needs for our local communities, and gears our firm towards the utmost diligence to our local partners and communities.

Our firm has a full understanding of the **City of Edinburg** project needs and concerns. Our Engineers have provided professional engineering services to the city over many years. Most recently, CRUZ-HOGAN has had the privilege of working with the **City of Edinburg** on the ***Texas Water Devolvement Board (DWSRF) Downtown Water Treatment Plant Improvements***

We understand that the needs of the **City of Edinburg** can range from small to large-scale projects. However, no matter the project size, CRUZ-HOGAN has the same dedication to fulfilling the City's engineering needs.

Beginning with the Planning Phase, our Engineers will consult with the city to establish specific project goals. Based on our many years of experience in the Rio Grande Valley, we are prepared to provide accurate cost estimates for our client's engineering designs. We focus on providing the best cost analyses so that our clients can make the necessary improvements at a reasonable cost, without sacrificing quality.

The Design Phase is then completed within the city's allotted time frame and parameters. Plans and Specifications are developed for the city to review while it is in development. The project will then move into the Bidding Phase, in which we are available to address any concerns or questions that the City and Contractors may have.

Once a project has been approved and awarded to a bidding Contractor by City of Edinburg, then CRUZ-HOGAN will provide Construction Management during the Construction Phase. Our Engineers strive to maintain projects within budget, while addressing any project changes with the minimum amount of change orders possible. The Engineer will be in constant contact with the Contractor to assure timely completion of the project. Once the project is successfully completed, our Engineers will provide the city with "As-Builts" and all other necessary close-out documents.

We pride ourselves on maintaining working relationships with our clients, many of whom we have served for years. This is one of the many benefits of working with a local firm. Over the years, we have come to understand the needs and concerns of the city, which we take into account for each individual project. We look forward to many more successfully completed projects with the City of Edinburg.

Project Approach

CRUZ-HOGAN *Consultants, Inc.,* has experience and knowledge of the procedures, processes, and approvals required for the successful completion of a project. Our firm will expand on its experience to provide a creative approach to the design and development of all projects, including assistance for the Owner as necessary. Our staff will be pro-active and maintain continuous communication and documentation in all phases of project development.

Ultimately, the successful completion of a project can best be attributed to the approach that is taken during project development. CRUZ-HOGAN knows how important it is to have a solid effective approach. CRUZ-HOGAN also has experience working with the current phase-based approach system that the Owner uses for planning, designing, and providing construction phase services for a project. Utilizing elements of the current system, CRUZ-HOGAN will expand on it and develop projects in three phases. Phase 1 is the Planning and Schematic Phase, Phase 2 is the Design Phase, and Phase 3 is Construction Phase Services.

Phase 1: PLANNING AND SCHEMATICS: This is the first phase of project development. During this phase, the project will be looked at to determine all issues that will need to be addressed. Design alternatives and options will also be developed and evaluated from a value engineering standpoint. Our firm will also be able to provide assistance to the City of Edinburg with the facilitation and preparation of any funding agreements, attend preliminary conferences with the County and State programs, assist in obtaining approvals in relation to the Project, and prepare Preliminary Engineering Feasibility reports. Preliminary investigations and research will begin during this phase; information such as as-built plans, right of way maps, topography maps, geotechnical investigations, and previous drainage/street studies will be gathered. Other key components of Phase 1 include:

Data Collection/Field Investigations/Surveying:

During this phase all information and data relevant to the study will be collected. This includes, but is not limited to the following: As-built plans and future improvement plans, Lidar and land survey data, aerial photography maps, existing drainage/street studies, inventory of existing drainage/street facilities such as culverts and storm drains, FEMA floodplain maps, land use maps, soils maps, etc. Extensive field investigations will also be performed during this phase to determine localized road flooding issues, low lying areas, drainage blockages, and drainage patterns within the city area.

Environmental Investigations:

During this phase, as per funding requirements if needed, an environmental investigation will be conducted to determine wherever any environmental impacts may be present. An environmental assessment (also known as an environmental impact assessment) is a process that gauges the potential environmental impact of a project before it is begun.

Phase 2: DESIGN: Phase 2 will consist of developing the detailed plans, specifications, bid tabulations/documents and cost estimates for each project. Proposed plans will include the preparation of a title sheet/index, plan and profile sheets, irrigation crossings, water and sewer plans, traffic control plans and

sequence of work notes, SSWP3 plans and notes, and miscellaneous wastewater details. Our personnel will assist the Owner with all aspects of the Project bids, advertisement, attendance of bid openings, tabulation of the bid proposals, prepare and coordinate approval of formal Contract Documents, and issue the Notice to Proceed. During this phase, any other ongoing coordination will continue with the surveyors, utility companies, and others. Plans will be submitted at 30%, 60%, 90%, and 100% milestones to the Owner as well as all utility companies. Review meetings will be held to discuss and review the plan submittals. All horizontal utility conflicts will be identified at 30% and by 60%, any vertical information that may be required will either be provided by the utility companies. By the 90% milestone, utilities will be expected to provide a plan of action for any potential adjustments that may be required.

Hydrologic And Hydraulic Modeling:

Certain projects main encompass the needs for storm modeling for drainage improvements. Upon the completion of data collection and the field investigations, the next phase will be the development of (H&H) hydrologic and hydraulic models. As part of the hydrologic models, all exterior and interior drainage area boundaries will be determined and flow rates will be computed for the 5, 10, 20, & 100-year storm frequencies. Drainage area exhibits will be developed and will document the flow patterns, contours, and flow rates. Upon completion of the hydrologic models, the determined flow rates will be used to develop the hydraulic models. The hydraulic models will consist of analyzing existing outfall channels, storm sewer systems, culverts, and roadside ditches.

Phase 3: Construction Phase Services: CRUZ-HOGAN *Consultants, Inc.* will provide construction phase services support for all projects. Our personnel will be readily available during the bidding process to answer and address any questions that potential bidders may have. Upon awarding the construction contract, our personnel will request and coordinate all necessary construction staking (if required), and will make site visits to the project to assure plan compliance. Our personnel will schedule periodic construction meetings to assure that the project is on schedule. Our staff will continue to coordinate with the contractor and the utility companies to assure that the contractor and utility companies are aware of each other's schedules. Any Requests for Information that the contractor may have will be promptly addressed. Our staff will coordinate and process any required change orders. If required, our staff will inspect and provide inspection reports for all Storm Water Pollution Prevention Measures as per TPDES Requirements. Throughout the project construction, our staff will review all shop drawings, review and recommend approval of request for payment, and will work hand-in-hand with the Owner's staff to ensure that the work is progressing per plans. Upon completion of the project, a final inspection will be performed with the contractor, the Owner and/or City Inspectors, and Project Manager. A final punch list for the contractor will be developed in order to assure that the project is to the satisfaction of the Owner.

Lastly, CRUZ-HOGAN *Consultants, Inc.* will compile and distribute all construction redlines to design consultants for preparation of the "Plan of Record" or "As-Built" Plans from the design consultants and deliver them to the Owner.

Quality Assurance/Quality Control (QA/QC) Practices

A big part of the success of CRUZ-HOGAN is our commitment to QA/QC Practices. We have an established set of criteria that are the foundation of our QA/QC Procedures. These criteria are the following:

- ***Knowledge/Experience:*** CRUZ-HOGAN will assign a knowledgeable and experienced team member to lead the various tasks to minimize errors and omissions.

- ***Coordination/Communication:*** CRUZ-HOGAN will establish open lines of communication between City Engineer and all team members to assure that all project needs are addressed. All information regarding the project progress and related plan changes will be forwarded to all team members.
- ***Constructability Review:*** The plans will be reviewed at all project milestones to determine if the proposed designs are safe and provide adequate consideration to constructability and value engineering.
- ***Accuracy/Completeness:*** The plans will be reviewed to identify any drafting and design discrepancies and to verify that the plans are in compliance with the respective design manuals. Construction quantities will be tabulated by several individuals to verify accuracy. The plans will also be reviewed to assure that all bid items are accounted for.

Design Schedules: Schedules will be developed for the design phase of the project in order to complete the project design in a timely manner. Throughout the QA/QC Process, the design and consideration of utility design will be closely looked at to minimize conflicts. CRUZ-HOGAN will coordinate internally to assure the most feasible solution is used for all conflicts, whether it be a design change (i.e. inlet adjustments, profile adjustments, etc.) or having to design a utility relocate. The design and construction schedule of the utility companies will be considered in the overall project schedule, and traffic control plans will include providing safe work zones for utility adjustments.

CRUZ-HOGAN has demonstrated its ability to provide excellent, innovative, cost-saving engineering and design services in a timely manner. The overall commitment that CRUZ-HOGAN provides to the project is unsurpassed. Attention to detail and rapid response to issues are staples of CRUZ-HOGAN's philosophy. CRUZ-HOGAN has an excellent track record for successful projects and extremely satisfied clients.

Section VI: Insurance

CRUZ-HOGAN Consultants, Inc. carries $1,000,000 of Professional Liability Insurance. Any additional insurance necessary for the completion of the proposed projects will be obtained to meet the requirements of the City of Edinburg. Certificates of Insurance with current coverages can be found in the attachments.

Section VII: Profesional Services Agreement

We have reviewed the Professional Services Agreement included in the Request for Qualifications packet, and CRUZ-HOGAN Consultants, Inc., agrees to meet the prerequisite insurance requirements, and if selected, agrees to enter into such agreement.

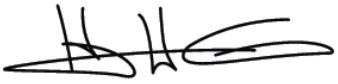
RE: RFQ NO. 2024-9 | CITY OF EDINBURG - ENGINEERING SERVICES ROTATION - MECHANICAL, ELECTRICAL, AND PLUMBING (MEP) ENGINEERING

DBR Engineering Consultants, Inc. has had the opportunity to work closely with the City of Edinburg on a handful of projects over the last 3 years. Our team is proud to be involved with the growing city while also serving the community we're part of.



We would appreciate the opportunity to continue our work with the City of Edinburg on projects that require Mechanical, Electrical, and Plumbing (MEP) engineering services. We will respond quickly when a need arises; we will pay close attention to detail; and we will serve you with courtesy, respect, and integrity. Furthermore, we have significant experience providing MEP engineering services to municipal facilities across Texas. This experience has helped us to develop project management skills and processes that will help us to continue delivering successful projects for the City of Edinburg.

We understand that the City of Edinburg is seeking qualified professional engineering firms to provide services on an as-needed basis for a variety of capital improvement projects and city programs and projects. We understand the projects may be discrete, short therm assignments or may be part of larger capital or planning efforts. Our dedicated team of engineers and designers is prepared to provide the City of Edinburg with all of the requested services regarding MEP engineering and will deliver high quality and personal service from the initial planning stage through the close-out of each project we take on. Our current workload is such that we can begin work on new projects immediately. Our depth of resources allows us to manage large or small projects and meet the most aggressive schedules.

DBR is registered with the Texas Board of Professional Engineers (TBPE Firm No. F-2234) and is in compliance with the Rules and Regulations for Licensing as set forth by TBPE. Our firm is based in Texas and we will serve the City of Edinburg from our McAllen office. We would like to express our strong interest in providing the City of Edinburg with MEP engineering services, per the Request for Qualifications for Engineering Services Rotation (RFQ No. 2024-9). Additionally, as Principal-in-Charge, I will serve as the primary point of contact and I am authorized to bind the firm to contract.

Thank you for your consideration and we look forward to the opportunity to continue working together.

Sincerely,

Hugo Avila, PE, Principal
DBR Engineering Consultants, Inc.

2 | FIRM QUALIFICATIONS AND EXPERIENCE

2. FIRM QUALIFICATION AND EXPERIENCE – DISCUSS THE FIRM'S EXPERIENCE AND HISTORY IN PERFORMING ENGINEERING AND PROJECT MANAGEMENT SERVICES IN A TIMELY MANNER, PARTICULARLY FOR OTHER GOVERNMENTAL AGENCIES IN THE PAST TWO (2) YEARS. DISCUSS THE FIRM'S UNIQUENESS TO BEST PERFORM THESE SERVICES FOR THE CITY. IDENTIFY THE OFFICE LOCATION THAT WILL BE PROVIDING THE SERVICES AND THE APPROACH TO HANDLING PART-TIME STAFFING NEEDS FOR SMALLER ASSIGNMENTS.

DBR HISTORY

DBR provides an alternative to traditional firms by providing better opportunities for our people and as a result, a better experience for our clients.

Founded in 1972, DBR Engineering Consultants, Inc. has evolved into the premier MEP engineering firm in Texas, providing mechanical, electrical, and plumbing engineering services, as well as building commissioning, integrated technology, and security system consulting.

DBR's steady growth has been fueled by loyal clients who appreciate our willingness to listen, open-minded approach to problem-solving, and relentless commitment to service.

Now, more than 50 years later, DBR has a team of over 200 professionals in seven cities across the State of Texas. While our history guides our growth, our talented team of consultants are focused on the future. We are helping to create healthy and comfortable environments that will stand the test of time.

MEP ENGINEERING

Our MEP engineering practices ensure the smallest carbon footprint whether it's HVAC, lighting design, or plumbing systems.

BUILDING COMMISSIONING

Our fully independent Commissioning Agents are at the leading edge of system start-up and validation ensuring adherence to schedule & lower the cost of ownership.

INTEGRATED TECHNOLOGY

Our technology design is coordinated with the supporting MEP disciplines and architectural features yielding a seamless result.

SUSTAINABILITY

We hold ourselves accountable to preserve non-renewable resources with our ability to design above minimum code and standards.

+ GOVERNMENT

DBR's government portfolio demonstrates our experience with a wide range of municipal, county, state, and federal facilities.

We work closely with government agencies to understand their missions and how each facility will support their work efficiently. Our experience includes new and renovated City Halls, Courthouses, Police, Fire Stations, and Emergency Medical Service (EMS) Stations, as well as many others that perform vital functions for the communities we live in.

Government facilities are under constant scrutiny to do more with less. Our engineers understand this challenge and have worked together with a wide range of government organizations to ensure the right balance is struck between efficiency and functionality. Furthermore, our engineering solutions promote forward-thinking and positive growth that distinguishes each municipalities' identity.

- Commissioning
- Building Assessments
- Campus Central Plant Design
- Interior/Exterior Lighting Design
- Lighting Controls Systems
- Generator Design
- Plumbing System Design
- Technology & Security Design

Begin with the end in mind. We start with the date by which the intended users of the building intend to take occupancy of the project area, or the date which the City of Edinburg sets as the required completion date. Working backwards from this point, we factor in the time it will take to perform testing, adjusting, and balancing, commissioning activities, and punchlist corrections. This establishes a target date for substantial completion.

Working backwards from substantial completion, we estimate a reasonable time frame for the construction of the project. The time required to construct a project will vary depending on the scope and complexity of each project. We use our experience and the City's experience to estimate the time required for construction, and when necessary, we consult with local Contractors to confirm our schedule estimates.

We build time into the schedule for pre-construction activities, including administrative approval, advertising, bidding, and procurement, permitting and jurisdictional approval, shop drawing submittal and review, and equipment lead time. To ensure continuity of project objectives, we will follow the same method as we progress through the City's project. Our Partner in Charge and Project Manager will remain involved with the project from start to finish.

Our Project Manager will develop a detailed budget estimate for each project when the scope of work is initially defined. As we progress through the project and the scope of work becomes more clearly defined and as we prepare detailed construction documents, the budget estimate will be updated at each milestone to confirm that the scope of work is consistent with the available project budget.

Project Kick-Off Meeting
Team Leader: PIC | Support: PM
We will meet with the City of Edinburg staff to discuss the objectives for each project and the City's expectations regarding the project scope, budget, and schedule. We will identify the appropriate contacts and lines of communication for the project and agree upon a time frame for meeting again to solidify the project scope and budget.

Initial Discovery Period
Team Leader: PIC | Support: PM
DBR will review all available as-built documents and visit the project site to make an initial assessment of the existing conditions.

Scope and Budget Identification
Team Leader: PIC | Support: PM
We will perform calculations, analyze existing equipment specifications and service records, and research applicable code requirements in order to determine the necessary scope of work. We will develop a preliminary budget estimate based on the recommended scope of work. We will meet with City of Edinburg officials to review our recommendations. At this time we will submit an outline of the proposed scope of work, the proposed project budget, and the proposed schedule for the completion of the project.

Project Development
Team Leader: PM | Support: PIC, Designers
After the proposed scope and budget are agreed upon, our team of engineers and technical staff will proceed with the production of the project deliverables, including plans and specifications. At appropriate intervals we will present our progress to university representatives in order to keep the City of Edinburg abreast of our status on the project, as well as to solicit feedback and to allow the City of Edinburg to provide input on important decisions.

Project Presentation and Review
Team Leader: PM | Support: PIC
Upon completion of the deliverables, we will meet with City representatives to present our final documents along with a final budget estimate.

Quality Control Review
Team Leader: PM | Support: PIC, QA
DBR performs thorough in-house quality control reviews at project milestones. Our project team meets to review the entire scope in order to coordinate and confirm the completeness and quality of our work. For larger projects, we will utilize an independent engineering firm to perform a peer review of our work.

Construction Administration
Team Leader: PM | Support: PIC, CA
During the construction of a project, DBR's project manager and construction administrator will work closely with the Contractor to ensure that the intended level of quality is produced and that the City of Edinburg's expectations are met. We conduct regular coordination meetings on-site with the Contractor and perform frequent project site visits.

OUR DESIGN APPROACH FOR EACH DISCIPLINE INCLUDES:

MECHANICAL DESIGN METHODOLOGY:

- Specify energy efficient HVAC equipment and systems
- Use energy modeling software to estimate energy usage and provide life cycle calculation
- Design HVAC systems to meet latest ASHRAE codes and standard
- Include Energy management and control system for optimum operation of building systems

ELECTRICAL DESIGN METHODOLOGY:

- Specify energy efficient lighting including LED light fixtures
- Include automatic lighting controls such as occupancy sensors in design
- Pursue daylight harvesting where appropriate, if approved by owner.
- Specify harmonic mitigating transformers
- Specify surge protection to protect the building's electronics.
- Suggest an infrared survey of the existing equipment to remain to find issues.
- We would evaluate the transformers to determine the capacity based on watts per square foot.

PLUMBING DESIGN METHODOLOGY:

- Our first approach is to work on reducing the water usage on a project.
- Specify low flow faucets and flush valves and automatic "sensor" faucets and flush valves.
- Our approach to energy efficient is to specify high efficiency water heaters.
- We can design systems with instantaneous water heaters if required.
- We work with owner and architect so that we specify appropriate fixtures for the space design.

At DBR, we believe that our employees must collaborate in order to produce a well coordinated design. DBR's design philosophy is to provide the Owner with the best systems within the Owner's budget. In other words, we don't keep producing the same systems over and over because it saves us money. We are always interested in the latest technology and working with the Owner to incorporate it into the design. DBR is always mindful of life cycle cost and energy savings.

Adherence to the City of Edinburg's design guidelines and standards will be critical to the success of the project. We have had the opportunity to work with multiple governmental entities across the state of Texas. Our experience with these institutions has taught us the value of adhering to design standards. We will review our work for conformance to the guidelines at each step of the design process.

The following are examples of how we manage projects during the construction phase. These tools are utilized in every project DBR performs.

PROJECT MANAGEMENT PLAN

We use a simple plan to document some key information about each project. Our project management plans include a description of the project scope, project schedule, the project team members and a description of their responsibilities, and the quality control procedures for the project.

PRODUCTION SCHEDULE

We use our database to maintain a schedule of all projects which each of our project managers is responsible for. This schedule is reviewed with each project team on a weekly basis. The schedule includes project milestone dates, the name of the individuals working on the project, the estimated time that each team member will devote to the project in a given week, and brief notes regarding the status of the project.

DRAWING/DOCUMENT LOG

We use our project information database to log all sets of plans and specifications for each project. This allows us to keep track of when we published or received the documents, who they were sent to/from, and where they are stored in our office. This allows us to quickly locate documents at any stage during a project, and after a project is completed.

SHOP DRAWING DATABASE

We use the same project information database to track all product submittals and shop drawings. We log the date that submittals are received, the date they are returned, and the individual in our office who reviewed each.

CONSTRUCTION PHASE FOLDER

During the construction phase of a project, we follow a standard procedure for electronic filing all documentation and correspondence, including RFIs, requests for proposal, pay applications, and contract forms. This process allows us to find documents quickly when needed.

Our experience with governmental agencies in the past two years includes the following projects:

CITY OF MCALLEN - PUBLIC UTILITY OFFICE | MCALLEN, TX
Addition/Renovation

Client: City of McAllen
Client Contact: Zeferino Mendoza
Tel. (956) 681-1180

DBR provided MEP engineering services for 2,200 sq. ft. of additions and renovations to the Public Utility Office.

CITY OF MCALLEN - FIRE TRAINING FACILITY | MCALLEN, TX
New Building

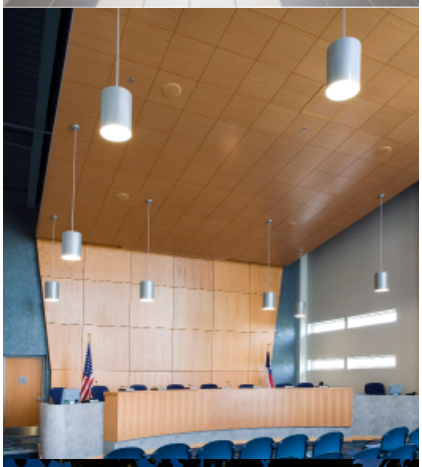
Client: City of McAllen
Client Contact: Juan Martinez
Tel. (956) 681-1001

DBR is providing MEP engineering services for a new 14,975 sq. ft. fire training facility, which includes training space, classrooms, conference rooms, office space, and storage space.

CITY OF MCALLEN - TRES LAGOS FIRE STATION | MCALLEN, TX
New Building

Client: City of McAllen
Client Contact: Juan Martinez
Tel. (956) 681-1001

DBR is providing MEP engineering services for a new 11,000 sq. ft. fire station, which includes an apparatus bay, meeting rooms, and living quarters.



CITY OF MCALLEN - MCALLEN PUBLIC LIBRARY | MCALLEN, TX
Systems Upgrades

Client: City of McAllen
Client Contact: Juan Martinez
Tel. (956) 681-1001

DBR provided MEP engineering services for the conversion of the primary-secondary chilled water loop to a variable flow and conversion of the condenser water loop to a variable flow at the city's library. The conversion required the replacement of motor starters with variable speed drives for the pump motors. Sensors were added to facilitate control of the plant as well.

CITY OF MCALLEN - CITY HALL MECHANICAL UPGRADES | MCALLEN, TX
Systems Upgrades

Client: City of McAllen
Client Contact: Juan Martinez
Tel. (956) 681-1001

DBR provided MEP engineering services for HVAC upgrades at City Hall. Project included the replacement of chilled and hot water valves to existing fan coil units and air handlers, and a new dedicated outside air unit provided fresh air to the building.

CITY OF MCALLEN - TRAFFIC OPERATIONS FACILITY | MCALLEN, TX
Renovation

Client: City of McAllen
Client Contact: Juan Martinez
Tel. (956) 681-1001

DBR provided MEP engineering services for the renovation of the Traffic Operations facility.

CITY OF MCALLEN - PUBLIC WORKS ADMINISTRATION FACILITY | MCALLEN, TX
Systems Upgrades

Client: City of McAllen
Client Contact: Zeferino Mendoza
Tel. (956) 681-1180

DBR provided MEP engineering services for the design of a new generator to provide backup power for the entire Public Works Administration facility.

CITY OF TERRELL HILLS - MUNICIPAL COMPLEX | TERRELL HILLS, TX
Generator Upgrade

Client: City of Terrell Hills
Client Contact: Bill Foley
Tel. (210) 824-7401

DBR provided MEP engineering services for the DBR provided MEP engineering services for the replacement of the existing generator serving emergency power requirements at the building. The purpose of the upgrade was to provide additional capacity for emergency operation of the facility during extended power outages. Backup power was required for the server room, council chambers, and meeting rooms, including the HVAC systems. Additional backup power receptacles were required in other spaces throughout the facility. A generator load analysis was performed to select the appropriate generator size.

3 | TEAM MEMBER QUALIFICATIONS/EXPERIENCE

3 | TEAM MEMBER QUALIFICATIONS AND EXPERIENCE

3. TEAM MEMBER QUALIFICATIONS AND EXPERIENCE – SUBMIT RESUMES SUMMARIZING QUALIFICATIONS AND EXPERIENCE OF PROJECT MANAGER, KEY STAFF AND ANY SUPPORT STAFF LIKELY TO BE ASSIGNED TO THE WORK.

Our firm has seven offices in McAllen, Laredo, San Antonio, Austin, Houston, Dallas and El Paso. A team of engineers in our McAllen office will work with the City of Edinburg. Edward Puentes, PE will serve as the Partner in Charge and Hugo Avila, PE will serve as the Principal-in-Charge for City of Edinburg projects. Hugo will act as the main point of contact for delivering the Owner's directives to the consultant team. Hugo's technical knowledge and ability to meet project requirements in a timely manner assure a well designed facility for the client. Please see our organizational chart below and resumes on the following pages for our proposed project team that will be assigned to the City of Edinburg's projects.

City of Edinburg

City of Edinburg
415 W. University Drive
c/o City Secretary Department (1st Floor)
RFQ No. 2024-9 Engineering Services

RE: DeShazo Group Inc., Request for Qualification 2024-9 Engineering Services Rotation

Dear City of Edinburg,

The City of Edinburg's thriving community is currently searching for a highly qualified transportation firm. In 1980, The DeShazo family founded what would become a leading traffic engineering force in North Texas. Now, 44 years later, the DeShazo Group has been involved in more than 5,000 professional engineering projects that have impacted communities throughout Texas and the United States. These projects have included traffic impact studies, thoroughfare plans, traffic signal warrant analysis, traffic signal design, traffic and parking master plans, parking analysis, functional parking design and many others. Our HUB and WBE firm has extensive experience in providing traffic and parking services for numerous properties including civic, transportation, commercial developments, mixed-use and institutional settings. Many of these feature a sophisticated blend of private, public, and commercial spaces. Many of the developments we have been involved in are designed to create vibrant and multi-functional areas that prioritize pedestrian traffic. These areas blend different types of land uses, public amenities, and commercial buildings in a cohesive manner, creating a community destination where people can live, work, play, and shop. We offer personalized attention from a local firm that has the resources and expertise to provide exceptional services. We will serve you out of our main office at 400 S. Houston Street, Suite 330 in Dallas, Texas 75202. Our team produces high-quality, accurate, and responsible reports, studies, and analysis reports for our services. Currently, we have IDIQ contracts with the City of Garland, the City of New Braunfels, the City of Woodway, the City of Hutchins, the Town of Prosper, Hays County, Dallas ISD bond programs, the City of Dallas Aviation, the University of Nort Texas, Texas Tech University System and the Southern Methodist University.

The DeShazo Group is ready to provide the City of Edinburg with professional traffic engineering services. The attached statement of qualifications and project examples is a small portion of the thousands of projects DeShazo Group has performed over the last four decades. We are confident that our dedicated and skilled team of traffic engineers with more than 44 years of local and national experience can successfully lead the City of Edinburg in its transportation efforts.

Thank you for the opportunity to submit our qualifications for the RFQ. We look forward to our working relationship with the City of Edinburg. DeShazo Group grants the City of Edinburg and its representative authorization to contact any references listed in this qualification document.

Please call us at Office: (214) 748-6740 or directly: at 214-748-6229 if you have questions or comments.

Respectfully,

Chuck DeShazo, President DeShazo Group, Inc. chuck.deshazo@deshazogroup.com
400 South Houston Street, Suite 330 Dallas, Texas 75202 P. 214.748.6740 www.deshazogroup.com

TRAFFIC ENGINEERING SOFTWARE

- **AutoCAD 2024:** Used most commonly for traffic signal design
- **AutoTURN 2024:** Turning movement analysis at the access and intersection curbs
- **ParkCAD 2024:** Parking Design, lot management, and access improvement, etc.
- **Agi32:** Photometric Lighting Analysis, can be utilized to evaluate the adequacy of the existing lighting conditions as well as future sufficiency
- **ITE Tripgen 11th edition:** Web-based software used for traffic, pedestrian, truck, transit, and bicycle trip generation
- **ITE ParkGen:** Site Parking Generation
- **Synchro and Sim 10th, 11th, 12th edition:** Transportation engineering software used for design, model, and optimize traffic signals, corridors, and networks
- **(DSPM):** DeShazo Shared Parking Model used for parking analysis

TRAFFIC SIGNAL WARRANT ANALYSIS & DESIGN METHOD

The DeShazo Group uses the time-tested method and protocols that we have utilized in the past to design traffic signals in the City of Edinburg. Our team combines the Texas Manual on Uniform Traffic Control Devices (TMUTCD) guidelines with the best industry practices and local governing agency standards. We use software such as AutoCAD (for traffic signal design), AutoTurn (for turning movement analysis at the access and intersections evaluating median, radius, lane width and curbs), Agi32 (for Photometric Lighting Analysis to evaluate the adequacy of the existing lighting conditions as well as future sufficiency), Highway Capacity Software (for evaluating the multimodal operation of streets, intersections, roundabouts, highways, freeways, warrant analysis and off-street paths), Synchro and SimTraffic12 (for analysis and simulation existing and future projected traffic), and ITE TripGen and ParkGen (for traffic, pedestrian, truck, transit, and bicycle, trip and parking generation). The DeShazo Group also references the latest accessibility standards set forth by ADA, PROWAG, and TAS to ensure the accessibility of our designs.

We gather existing weekday or weekend hourly vehicular and non-vehicular traffic volumes by individual turning movement for TxMUTCD specified time windows depending upon the nature of the subject intersection. To determine the anticipated traffic growth on the subject intersection we analyze the historical traffic trends and input from the stakeholders. We also generate hourly vehicular traffic volumes based on the proposed development, calculated from the Institute of Transportation Engineers Trip Generation (where applicable) and/or our historical traffic volume research. In cases where there are no published off-peak period trip generation characteristics for the planned uses, we collect hourly traffic volume characteristics at an existing site exhibiting similar trip generation characteristics.

We apply the traffic-volume-related traffic signal warrant criteria defined in the Texas Manual on Uniform Traffic Control Devices (TxMUTCD) to the traffic volume data compiled in the preceding tasks to determine the status of satisfying the applicable criteria for traffic signal installation and its construction timeframe. Finally, we summarize the findings of the Traffic Signal Warrant Analysis (if needed). We also perform intersection traffic analysis using Synchro Software to determine the adequacy of capacity and determine whether geometric improvements to the intersections are needed or whether a more sustainable design can be accomplished without capacity compromise. The first step is to contact the approving agency to confirm the parameters and requirements of the signal design. If there is no sufficient electronic base map, create a to-scale base drawing. Then, do a reconnaissance and detailed field survey of the subject intersection to confirm the existing pavement conditions, nearby traffic control devices, above-ground utilities, and other field conditions. Next, develop design plan sheets that show traffic signal poles, detectors, conduit runs, wiring, and signal head types and locations to satisfy the approving agency. After this, develop quantity estimates for the traffic signal construction and insert appropriate specification sheets from the approving agency. At every milestone of signal design plans, a probable construction cost based on drawings, specifications, and materials should be estimated and presented at 30%, 60%, 90%, and 100%. Finally, develop a construction plan sheet that shows street light poles, conduit runs, wiring, light types, locations, and agency construction specifications to furnish the signal construction.

ENGINEERING STUDIES & ANALYSIS

Traffic engineering is a specialty here at the DeShazo Group. We have completed thousands of traffic engineering projects, ranging from single intersection designs and analysis to major area-wide systems involving hundreds of intersections. Throughout North Texas, our services can virtually be seen in every aspect of traffic engineering.

The method DeShazo uses for Traffic Engineering Studies is to collect traffic volumes for certain roadway intersections during peak hours and existing daily traffic volume counts on adjacent roadway links in 15-minute increments by direction. We then calculate the trip generation of the development using the Institute of Transportation Engineers *Trip Generation Manual (11th Edition)*. If insufficient data are available from the manual or if off-peak-period data are required, other technical methodologies may be required to estimate site-related traffic volumes. We project the site-related traffic origination and destination characteristics, travel routes, and mode split based on information provided by the Client and/or DeShazo's professional judgment. DeShazo reviews historical traffic volume data, if readily available, to estimate traffic growth rates of background traffic within the study area at the estimated site buildout years.

Develop peak-hour traffic analysis volumes for the following scenarios.

- Existing conditions
- Phase I buildout year without site traffic
- Phase I buildout year with site traffic
- Full project buildout year without site traffic
- Full project buildout year with site traffic
- Horizon year without site traffic
- Horizon year with site traffic

Based on this data we analyze the intersection peak-hour traffic operational conditions and the daily roadway link capacity conditions for the scenarios. Develop recommendations as needed and where appropriate to mitigate unacceptable traffic operational conditions in the scenarios.

Evaluate one or more of the following TxDOT design guidelines, standards, and regulations, if required, for site driveways located on roadways maintained by the Texas Department of Transportation.

- *Access Management* guidelines, including driveway spacing, adjacency to freeway ramps, etc.
- Auxiliary lane requirements (left-turn and right-turn deceleration lane analysis)
- Intersection Sight Distance (may include a cursory review using the Google Earth and Mapping platforms.

Summarize the project background, data, analysis, results, and recommendations in a Technical Memorandum for submission to the required government agency.

QUALITY ASSURANCE/ QUALITY CONTROL

DeShazo Group is committed to providing quality service, products, and deliverables at all times. DeShazo has developed a quality assurance program that every project manager is required to know and use. We certify that our procedures ensure high-quality services that satisfy our client's needs there is no learning curve relative to quality. Our goal is to ensure that all deliverables meet your specifications and are error-free. Our quality is based on a 43-year history of tradition:

- **Quality is planned** with proper coordination, supervision, and technical direction, understanding the scope of services, and using appropriately skilled personnel.
- **Quality is monitored** by a project manager to evaluate all work and procedures followed throughout all project stages.
- **Quality is reviewed** by a Licensed Professional Engineer or Principal.

We here at the DeShazo Group have a Quality Assurance Manual to provide guidelines for the preparation of engineering contracts, studies and reports, design drawings, construction plans, specifications, and contract documents, as well as services during construction administration. Employees are responsible for adhering to the procedures presented in this report. Any departure from these procedures must receive prior written approval from the Board of Directors. These guidelines and procedures are intended to assist us in providing consistently high-quality services to our clients in an efficient manner and under all circumstances to endeavor to adhere to a high standard of professional practices and to safeguard public safety. The Quality Assurance Managers of DeShazo Group are Chuck DeShazo and Onkar Dhondkar.

Reports are checked for clarity and correctness, including checking properly labeled tables and exhibits, calculations and statements supporting the engineering recommendations. Audits are conducted on a routine basis to establish and verify the adequacy of and conformance to the Quality Assurance Manual requirements and to determine the effectiveness of the program. Audits include an evaluation of policies, practices, procedures, and documentation of the Quality Assurance Program by our Principals. Records of outgoing documents produced by DeShazo Group, Inc. (including the Quality Assurance Manual, specifications, drawings, and reports) and a hard copy of all out-going job-related e-mails shall be scanned or saved as PDF file and saved under the project job in the subfolder labeled "Deliverables. DeShazo Group is committed to providing quality service, products, and deliverables at all times. We certify that our procedures ensure high-quality services that satisfy our client's needs there is no learning curve relative to quality. Our goal is to ensure that all deliverables meet your specifications and are error-free. Our quality is based on a 43-year history of tradition.

AVAILABILITY STATEMENT

A dedicated team has been assigned to the City of Edinburg's projects. Onkar Dhondkar will serve as the Project Manager, Raj Desai will handle Traffic Analysis, Pranav Sharma will be responsible for Signage Design and Logan Primm will work on Traffic Signal Design. The team's availability will be at 95%. The remaining 5% will be assigned to other projects that require urgent attention. The team is committed to completing the original project on time. The design schedule will follow the corresponding design phase of 30% complete, 60% complete, 90% complete, and the construction drawing phase. Each milestone of the phase is expected to take one to two months to complete. The team would contact the approving agency staff to confirm the parameters and requirements of the signal design. Create a to-scale base drawing if no sufficient electronic base map exists. Do a reconnaissance of the subject intersection to confirm existing pavement conditions, nearby traffic control devices, above-ground utilities, and other field conditions. Develop construction plan sheets that show traffic signal poles, detectors, conduit runs, wiring, and signal head types and locations to satisfy the approving agency. Develop quantity estimates for the traffic signal construction then insert appropriate specification sheets from the approving agency. Develop a construction plan sheet that shows street light poles, conduit runs, wiring, and light types and locations to satisfy the approving agency. A probable construction cost based on drawings, specifications, and materials at every milestone is 30%, 60%, 90%, and 100%.

COMMUNICATION

Having worked together with our core team on an extensive range of projects in the past, Onkar Dhondkar will serve as Project Manager and as the City of Edinburg's primary point of contact for the duration of the project. With their proven dedication to their client's success and the project's success, this established team has proven to be a valuable asset. Over the years, the team has built strong working relationships to meet challenges and client needs. The deliverables we produce are not only technically correct but also aligned with the client's goals.

- Respond promptly via telephone, email, web video, or face-to-face meeting to any city request
- Have a kickoff meeting with the city to discuss the tasks and expectations of the project
- Provide status updates to the city at timely points agreed upon in the kickoff meeting
- Submit reports, technical memorandums, and/or designs to the city at milestones agreed upon in the project kickoff meeting
- Submit final reports, memorandums, or designs to the city
- Represent the city before neighborhood groups, the county, TxDOT, and/or any other groups at the request of the city

The City's representatives will have phone numbers to direct office phones, cell phones, and email addresses for all staff working on each specific project. Staff will be available between 8:00 am to 5:00 pm, Monday thru Friday. Communication outside these hours will be responded to no later than the next business day. Every employee is required to enter their time into our accounting project management software Ajera on a daily basis. That is reviewed by a project manager who maintains track of the budget available, the hours expended, and the timeframe for accomplishing the task.

PROJECT FEE:
$25,000

PROJECT DESCRIPTION:

In 2020, DeShazo Group was contracted by MIG, Inc. on behalf of the City of Fort Worth. A project was launched to reconceptualize Heritage Park and Paddock Park, municipal parks located adjacent to the Tarrant County Court House in Fort Worth, Texas.

In DeShazo's capacity as a transportation engineering consultant on this project, engineers primarily analyzed pedestrian facilities and pedestrian safety, due to the planned changes to the site. Specifically, DeShazo studied crosswalk plans where N. Main Street (SH-287) splits into Commerce Street and Houston Street at E. Bluff Street. DeShazo also studied potential traffic control devices including pedestrian warning signs and flashers on SH-287 and provided recommendations to install appropriate traffic control devices such that vehicles coming off of the SH-287 bridge toward the park would be aware of pedestrians using the proposed crosswalk.

DeShazo also provided recommendations for the configuration of the proposed crosswalk, taking careful consideration for pedestrian safety. It was also recommended to lower the speed limit on SH-287 to decrease the risk of potential pedestrian incidents.

TRAFFIC ENGINEERING SERVICES

City of Highland Village

Project Description

DeShazo Group, Inc. was contacted by McAdams Company to conduct a review and update the City of Highland Village's Thoroughfare Plan. The Thoroughfare Plan for the city was prepared in 1991 by DeShazo Group, Inc. and then updated in 2003 by BW2 Engineers, Inc. Since both past thoroughfare plans, the city grew substantially with almost 97% of the city covered with residential, retail, recreational, office, parks, trail systems, and many more. The city planned to add more infrastructure and other transportation modes. There were current and future for trail system expansion, sidewalk improvements, and the addition of bike lanes, golf cart lanes, pedestrian walkways, and intersection impartments. DeShazo Group was tasked with producing a new 2022 Thoroughfare Plan Update Report and Map for the City of Highland Village. This thoroughfare plan update incorporated all those improvements along with recommendations based upon this study analysis.

Joppa Neighborhood Improvements in Dallas, Texas

The DeShazo Group was retained to conduct a traffic study for the Joppa Neighborhood in south Dallas. The neighborhood area is bounded by Carbondale Street to the west, Texas Loop 12 Service Road to the south, Sleepy Hollow Road to the East, and Linfield Road to the North. The neighborhood has Trinity River on the east side and Union Pacific Dallas Rail Yard on the west side. Both restrict multiple accesses to the neighborhood. DeShazo team evaluated traffic operations in the southern corridor of the Joppa Neighborhood with respect to different traffic flow patterns.

Joppa Preferred Ramp Orientation

Ramp orientation based on the O configuration we proposed moves the bus stop location. Bus maneuvering would be smoother if the O configuration was implemented. The bus traffic would have to make the least looping around the proposed section. Also, with this option, a single DART bus stop could be implemented. This would reduce pedestrians walking across Loop 12 Road.

CLIENT REFERENCE:
Town of Prosper
Harlan Jefferson,
Town Manager PO Box 307 Prosper, TX 75078
harlan_jefferson@prospertx.gov

PROJECT DESCRIPTION:

In 2020, DeShazo Group Inc. conducted a review of potential roadway alignments that would require amending the Town's Thoroughfare Plan. Each roadway alignment was first analyzed using Level of Service (LOS) methodologies for intersection capacity and roadway link segments. Then each roadway alignment was evaluated for other criteria to create a comparison to make recommendations. For the first part, the two LOS analysis required traffic volume quantities to be imputed to generate the comparison data. To provide a reasonable projection of these traffic volumes for the full build-out of the study area, the analysis used traffic volumes from the North Central Texas Council of Governments (NCTCOG) Mobility 2045 Model. For the second part, the DeShazo Group selected criteria that incorporate a review of factors that consider stakeholders affected by a thoroughfare plan amendment.

DeShazo Group reviewed and evaluated the traffic operational characteristics of a grid-based thoroughfare plan versus a non-grid thoroughfare plan for the Town of Prosper. This study included a capacity analysis of roadway links. In addition, the advantages and disadvantages of roundabouts over traditional signalized intersections were analyzed.

PROJECT FEE:
$87,652.71

PROJECT DESCRIPTION:

In February of 2016, DeShazo Group was contacted by the Donahue Development Corporation to request traffic engineering services for a planned multi-phase, mixed-use development in Rowlett, Texas. Located at the tip of the Lake Ray Hubbard peninsula in Rowlett, Sapphire Bay is a mixed-use development featuring single family homes and multi-family apartments as well as office, retail, restaurants, and personal service space. It is the first of two phases in a billion-dollar construction plan.

A traffic impact and roadway link analysis was prepared for the City of Rowlett detailing trip generation based on planned uses as well as an intersection Level-of-Service (*LOS*) analysis utilizing peak hour traffic volumes. Internal roadway network lane configurations were developed in addition to future Bayside Drive which will connect the two phases of the development across IH-30 upon full site build-out.

DeShazo Group continues to assist in development efforts on an as-needed basis.

PROJECT FEE:
$60,000

PROJECT DESCRIPTION:

In 2022, DeShazo Group was contracted by Graham Associates, Inc. to evaluate a Traffic Assessment Study and crash analysis for upgrading the traffic signal on Trinity Boulevard and Euless S Main Street in Fort Worth, Texas. The purpose of the study was to ensure that the LOS continues to maintain a satisfactory rating. The analysis found that the intersection will operate at an acceptable LOS once the signal cycle length and splits were optimized. The crash modification factor CMF analysis found improving the existing negative left-turn offset lanes to the positive offset left-turn lanes on Trinity Boulevard. It was recommended to implement this improvement as the CMF analysis implied an estimated reduction of 18 crashes after the improvement will be in place. In addition, with a likelihood of reducing all crashes by approximately 10% on Euless S Main Street, it was recommended to provide left-turning lanes to enhance crash safety.

Signal Design and Relocated Lights Design were services DeShazo provided for the intersection improvement project based on the traffic studies.

PROJECT DESCRIPTION:

In 2017, Salcedo Group contacted DeShazo Group regarding plans for the widening of Camp Wisdom Road from Belt Line Road in Dallas to Robinson Road in Grand Praire, Texas.

Due to geometry of the intersection at Camp Wisdom and S Carrier Parkway, signal modifications and additional vehicle signal heads were required. The City of Dallas also desired to replace the metal pole span wire design with mast arm poles to bring the intersection in line with current standards and specifications.

In addition to developing quantity estimates for traffic signal construction, DeShazo developed the following construction plan sheets:

- General construction notes and specifications sheets;
- Material quantity summary sheet;
- Existing conditions and removal sheet;
- Traffic signal poles, controller cabinet, detectors, conduit runs and signal head layout plan sheet;
- Quantity tables for wiring and cables, signal types, detection/phase diagram sheet;
- Intersection signs and pavement markings sheet.

PROJECT FEE:
$60,000

PROJECT DESCRIPTION:

InterVISTAS Consulting, Inc. retained the DeShazo Group to conduct a Traffic Impact Analysis (TIA) for proposed project specific alternatives on the surrounding roadway systems of the Dallas Love Field Airport. The overarching goal of the project was to identify the optimal location to develop a consolidated rental car facility and associated improvements for the Dallas Love Field Airport.

The DeShazo Group evaluated six potential sites for the proposed facility and their impact on the adjacent transportation systems. The purpose of this TIA is to evaluate the existing and projected traffic flows for each CONRAC alternative and identify associated improvements to the public transportation system necessary to maintain an acceptable level-of-service (LOS) as defined by the governing agencies. The study area of the Traffic Impact Analysis focused on 24 intersections at the airport. The development scenarios analyzed the existing, background, planning year (Background + Full Buildout), planning horizon year, and planning horizon year + site (2043 Horizon + Site).

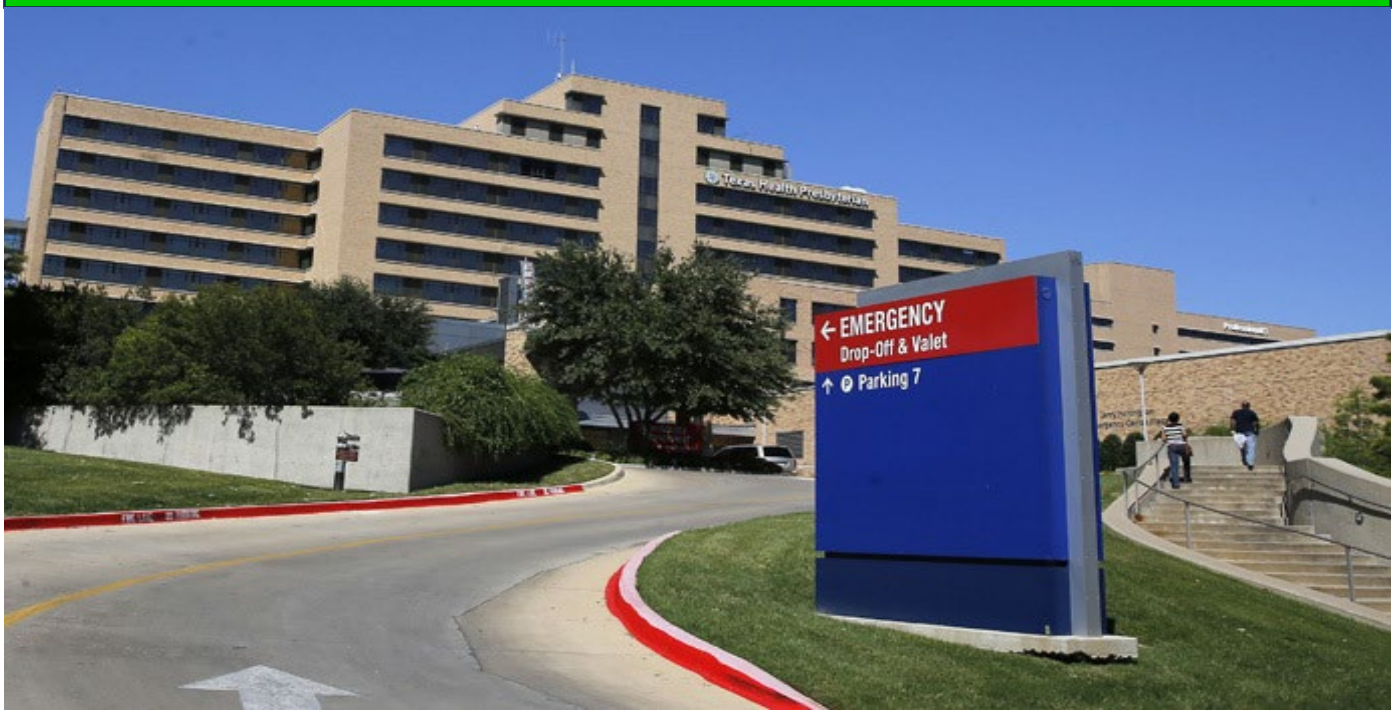
PROJECT FEE:
$140,000

PROJECT DESCRIPTION:

DeShazo Group worked on the John Peter Smith Hospital master plan concurrently with planning a 2,600-space parking garage and a Behavioral Health Hospital. DeShazo Group was engaged to assist with the traffic engineering, transportation planning, and parking elements of the master plan and also to provide a parking analysis and traffic impact analysis for the new garage and hospital.

The analysis of the traffic generated by the proposed development resulted in a moderate impact on the local roadway system. The project analyzed 20 intersections around the hospital campus. DeShazo suggested improvements to the local roadway geometry, roadway link capacity, and traffic control devices to improve traffic operations for the local roadway network.



After conducting a comprehensive analysis of JPS's parking supply, DeShazo found the peak parking demand rate for the campus based on parking observations and a parking accumulation study for all facilities 24/7. The hospital was determined to have a parking surplus of 1,309 spaces after buildout peak demand.

PROJECT FEE:
$56,350

PROJECT DESCRIPTION:

DeShazo was retained by Texas Health Resources to conduct a Traffic Study, Parking Study, and Wayfinding Study for the Texas Health Presbyterian Hospital. The purpose of the Parking and Traffic Studies was to consider potential alternatives for the replacement of parking Garage 7. The analysis of the traffic generated by the proposed development resulted in a minimal impact on the internal hospital roadway system. Based on the analysis results for both scenarios, 2023 Existing and 2023 Without Parking Garage 7, the study intersections were expected to operate at the same or better level of service We did not recommend any intersection geometric improvements or additional mitigation measures for the current condition as well as when the Garage 7 traffic is relocated. The Parking Study found peak demand during the relocation of the parking garage did not exceed the parking supply. The Wayfinding Study made recommendations for improving signage for site circulation, installing LED lights at pedestrian crossings, replacing old signs with vibrant reflective signs, repainting ground signs, adding more speed limit signs, additional lighting, adding new sidewalks, ADA-compliant curbs, 3D interactive mapping software and license plate reading technology for ingress/egress of parking area gates.

TRAFFIC WARRANT ANALYSIS STUDIES

INTERSECTION OF FM 156 AND G CARDINAS RD IN NORTHLAKE, TEXAS

In 2023, the services of DeShazo were retained by Provident Realty Advisors, to conduct a Traffic Signal Warrant Analysis (TSWA) for the proposed business park development at the intersection of FM 156 and Martin Ranch Road in Northlake, Texas.

The site is located in the northwest quadrant of SH 114 and FM 156 in the City of Northlake, Texas. The site was situated on a vacant land. The developer had planned for two new entrances on FM 156 and another one connecting through Martin Ranch Road.

Martin Ranch Road and FM 156 intersection operated as a three-legged unsignalized intersection with stop-control on Martin Ranch Road. The site traffic was expected to impact this intersection. The purpose of the analysis was to determine the potential necessity of a traffic signal at the intersection using traffic volume-related warrants.

The analysis found that the existing intersection volumes and the projected site-related volumes. The study intersection satisfies the criteria for traffic-related Warrants 1, 2, and 3 without and with the completion of the proposed Warehouse development as the intersection is meeting Warrants 1, 2, and 3 from the 2023 Existing condition and onwards.

DeShazo recommended the installation of a traffic signal at the intersection of FM 156 and Martin Ranch Road as the traffic volumes satisfy Warrant 1: Eight-Hour Vehicular Volume, Warrant 2: Four-Hour Vehicular Volume (70% Factor), and Warrant 3: Peak Hour Vehicular Volume (70% Factor) from the existing condition.

GARLAND FIRE STATION #1 DEVELOPMENT IN THE CITY OF GARLAND, TEXAS

In 2023, the services of DeShazo were retained by Martinez Architects, to conduct a Traffic Signal Warrant Analysis (TSWA for Emergency vehicle traffic signal) for the intersection of E Avenue D at Kaiser/Allen St and E Avenue B (Bankhead St) at Allen St.

The development will house the relocated Fire Station #1. The original Fire Station #1 to be relocated is situated in the northwest quadrant of Austin Street and N 9th Street. This is to be demolished/abandoned and will be relocated to the new proposed site located at the northwest quadrant of E Avenue D and Thomas Street. The district covered by the new proposed fire station location will remain the same. Construction on the new Fire Station #1 has begun and will be completed by spring 2024. This study analyzed the impacts caused by the proposed development for a full buildout year 2024 and a 5-year Horizon year 2029.

Finding for both intersections, Major Street has two or more lanes and Minor Street has one lane on each approach. Based on this case, 70% and 80% of vehicles per hour on major streets are interpolated to obtain 75% VPH, which is greater than 675 vehicles per hour. The existing major street number of

vehicles per hour had met the requirement for both E Avenue B and E Avenue D. Hence, this criterion met the requirement for Emergency Vehicle Traffic Signal Control.

A minimum of 30 calls per month was required to meet the criteria for installing an Emergency Vehicle Signal. The records of monthly and yearly records of calls from Jan-2021 till date were obtained from the Fire Chief of the Garland Fire Department. It is observed that a minimum of 230 calls per month were received at Fire Station 1 during this period. The number is way beyond the minimum threshold set by TxMUTCD. Hence, the criterion also satisfied the requirement for installing the emergency vehicle traffic signal control.

The speed study is also performed to check the criteria for High approach speed. It was observed that the 85th percentile for E Avenue B (Bankhead Street) and E Avenue D is 43 mph and 37 mph, respectively. During the observed period, on E Avenue B (Bankhead Street) 31.7% of motorists were traveling at speeds greater than posted 40 mph. Whereas, on E Avenue D 3.3% of motorists were traveling at speeds greater than posted 40 mph. Based on observed data this criterion satisfied the requirement for installing the emergency vehicle traffic signal control.

For all three scenarios, Chapter 4C does not satisfy the requirement for normal traffic signal control. But both intersections satisfy the requirement for emergency vehicle traffic signal control (Chapter 4G).

The analysis is based upon the existing intersection volumes and the projected site-related volumes. Projected traffic conditions at the subject intersection satisfy the criteria for traffic-related warrants for emergency vehicle traffic signals. DeShazo recommended the installation of an emergency vehicle traffic signal at the intersection of E Avenue D at Kaiser/Allen Street and E Avenue B (Bankhead St) at Allen St as the traffic volumes satisfy the two criteria as per Texas MUTCD. The guidelines from TxMUTCD should be used for the design of this traffic signals.

Project Manager: Onkar Dhondkar

DeShazo was retained in 2023 for designing and adding standard sheets for a pedestrian scramble diagonal crosswalk system like the Denton Square project for the Woman's University Signal Design. We developed construction plan sheets for traffic signal poles, detectors, conduit runs, wiring, signal head types and locations. Also, we developed estimates for the traffic signal construction and inserted appropriate specifications for the diagonal crosswalk sheet.

Traffic Signal Design & Traffic Signal Ple Relocation for Camp Wisdom Road & Carrier Parkway in Grand Prairie, Texas

Client Contact: Michael Salcedo Email: misalcedo@salcedogroupinc.com
Client: Salcedo Group, Inc.
Company Address: 110 SW 2nd Street Grand Prairie, TX 75050
Date: (2017 – 2018), (2022)
Project Manager: Onkar Dhondkar

The DeShazo Group made significant improvements at the Camp Wisdom and S. Carrier Parkway intersection. The improvements included signal modifications and the addition of vehicle signal heads. The City of Dallas also wanted to upgrade the intersection by replacing the metal pole span wire design with mast arm poles, which comply with current standards and specifications. To facilitate the construction, DeShazo developed various construction plan sheets, such as general construction notes and specifications sheets, material quantity summary sheets, existing conditions and removal sheets, traffic signal poles, controller cabinets, camera detectors (weathertight cable entries, mounting brackets, buckle with set screw), conduit runs, and signal head layout plan sheet. Additionally, they provided quantity tables for wiring and cables, signal types, detection/phase diagram sheets, and intersection signs and pavement marking sheets.

Traffic Signal Design Relocation for Exchange Parkway & Bossy Boots Drive in Allen, Texas

Client Contact: Randy Keith Email: randy@kmrealty.net Phone: (713) 275-2600
Client: KM Realty Advisors, LLC
Company Address: 7500 San Felipe Ste 750 Houston, TX 77063
Date: 07/31/19 - 4/15/20
Project Manager: Onkar Dhondkar

A retail development was being proposed at the northeast corner of Exchange Parkway and Bossy Boots Drive. The development consisted of two buildings with 6,358 SF and 10,933 SF each. There were changes/improvements needed at the corner of Exchange Parkway and Bossy Boots Drive. These changes led to the relocation of a traffic signal pole and the two pedestrian poles at the corner. Our client requested that DeShazo Group prepare traffic signal design plans in accordance with City of Allen specifications. The City of Allen required a full set of traffic signal plans showing locations of new signal pole for the NB movement and also the pedestrian pole relocations along with conduits, pullbox layout and wiring chart.

Traffic Signal Design for Stacy Road & US 75 SB Frontage Road in Allen, Texas

Client Contact: Will Winkelmann Email: will@winkelmann.com
Client: Winkelmann & Associates
Company Address: 6750 Hillcrest Plaza Drive Ste 325 Dallas, TX 75230
Date: 07/24/18 – 10/03/18
Project Manager: Onkar Dhondkar

Because of the Stacy Greene mixed development, the EB right turn on Stacy Road was proposed to have two right turn lanes to serve the traffic entering SB US 75 from Stacy Road. The existing roadway lane geometry was the only one channelized right turn lane. The City of Mesquite wanted two far-side signal poles for the right-turn traffic on Stacy going onto the US 75 SB Frontage Road. Traffic signal modification construction plans were required to complete the proposed intersection modifications.

Traffic Signal Design Pole Relocation for WJ Boaz Road & Old Decatur Road in Fort Worth, Texas

Client Contact: Kelly Agnor Email: kagnor@vaqueroventures.com Phone: 512-983-1793
Client: Vaquero Ventures, LLC
Company Address: 2900 Wingate Street Fort Worth, TX 76107
Date: 09/30/19 – 12/31/21
Project Manager: Onkar Dhondkar

A Dollar General store was being proposed at the southwest corner of WJ Boaz Road and Old Decatur Road. There were changes/improvements planned at the corner of WJ Boaz Road and Old Decatur Road. An additional EB right turn lane was added to the intersection. This led to the relocation of the pedestrian pole in the corner. The Client requested DeShazo Group prepare traffic signal design plans in accordance with City of Fort Worth specifications. The city required that the design plans include conduct and wire interconnect between the pedestrian signal and the traffic signal controller cabinet operating WJ Boaz Road and Old Decatur Road.

RE: RFQ 2024-9 Engineering Services Rotation

Dear Selection Committee,

Our team understands that you're experiencing a lot of growth as one of the fastest growing cities in Hidalgo County and the country. As such, you're faced with addressing the water challenges that face a growing community. You need a consultant who has extensive experience doing exactly that for communities just like Edinburg. **We bring a fresh perspective to deliver advanced solutions that support sustainable growth and address regional challenges.**

We'll leverage our national experts and extensive resources to craft customized solutions. Our local team is backed by nationally-recognized experts in a variety of areas. For example, we have specialized experts in alternative water sources, reuse (potable and non-potable), membrane technologies, groundwater brackish desalination, and funding initiatives. All these subject matter experts will be available as needed for any of your projects.

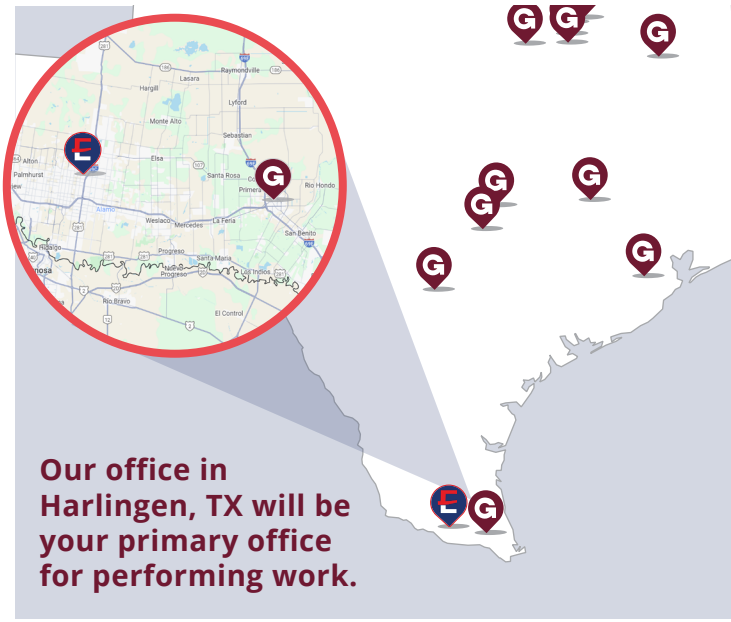
We also have a successful history of crafting customized solutions for small and large entities, especially those throughout Texas who face similar issues as Edinburg. With these experts on staff, we're able to find the best, long-term solution for each entity, which we'll also do for you.

Garver's innovative thinking provides long-term benefits for sustainable growth. With our local understanding and subject matter experts, we'll craft solutions that have long-term benefits for Edinburg. We'll also carefully consider the growth you're experiencing and how anticipating that continued growth will impact the projects coming from this rotation list. Your growth is also impacted by regional issues like drought that require finding additional water supplies and innovative technologies to make the most of the water available to you.

Our local team brings a fresh perspective to address even the most complex of challenges. As you can see, we have the experts and the expertise to address any challenge and any project. We also understand that you're facing challenges, like the regional drought and creating new water supplies , that require advanced solutions with innovative thinking. Garver has built a reputation of being an industry leader, delivering fresh solutions that balance innovation with practical implementation. So, we understand how our depth of experience will be beneficial to supporting your growth and the challenges it comes with.

Together, we'll leverage Garver's resources and experts to create fresh, innovative solutions to your most pressing challenges. If you have any questions, please contact me at (956) 321-7752 or IHuacuja@GarverUSA.com.

Sincerely,
GARVER



Isaac Huacuja, PE, CFM
Project Manager

Randy McIntyre, PE, BCEE
Principal-in-Charge
& Authorized Firm Officer

Firm Introduction

Garver is an employee owned multi-disciplined firm with over 1,300 employees across 55 offices in 19 states. Garver was founded in 1919 and over the years has established trust with clients through quality designs and innovative solutions. Our water team continues to exceed client expectations with dedicated project leadership and a high level of technical knowledge. At Garver, we understand the challenges that our clients face and find the most creative solutions to meet their needs.

Our team has completed studies, designs, and implementation of numerous water and wastewater treatment plants across Texas for large growing populations like Edinburg. **Whether the best solution is a complete, custom-engineered innovative technology or integrating conventional pre-engineered systems, our team will collaborate with you to determine the best solutions for your needs.**

Garver's approach to handling part time staffing for smaller projects.

Our Harlingen office boasts 40 employees with the capacity to handle any project big or small. Located just 30 minutes away and supported by our design centers, we can be available for anything Edinburg needs.

Legal Status

Limited Liability Company

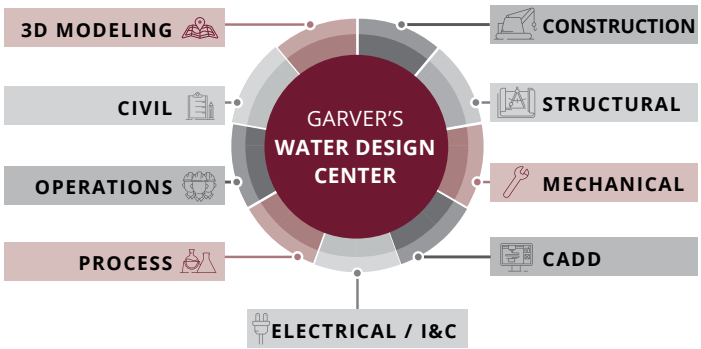
Firm Uniqueness

Our local team will leverage Garver's unique resources to address your project needs.

What makes Garver unique is the variety of resources available to our regional teams and the autonomy to allocate those resources as needed. Isaac can pull in resources necessary to the success of Edinburg's projects.



Our team works seamlessly together to:

1. Address unique water quality and resource challenges
2. Evaluate long-term solutions to drought and resiliency
3. Provide multi-disciplined, efficient, and customized solutions.

Garver's Water Design Centers have the resources to support you at every stage of every project with skilled, dedicated experts.

Garver's Water Design Center houses disciplined engineers who are dedicated solely to water and wastewater projects, delivering highly creative and coordinated services for efficient project delivery.

The WDC provides all the necessary professional engineering services under one roof, as shown to the right. Because the WDC has a wide range of multi-discipline services, we're capable of handling any |project concern and identifying them early on to mitigate their impact.

Our subject matter experts create science-based solutions that are cost effective and easily implementable.
Garver's subject matter experts balance academia with commonsense solutions. Through this approach, our project teams create science-based solutions with implementable practices for utilities like you. This team is brought onto projects that need their specific expertise to solve our clients' most challenging concerns. Our subject matter experts are leaders and technologists in these major areas: water/wastewater treatment, water/wastewater pipeline and pumping infrastructure, and water reuse.

This team has dedicated team members who specialize in:

- Disinfection by-products
- Distribution system water quality
- Treatment plant operations
- Biological nutrient removal and recovery
- Biosolids treatment and disposal/reuse
- Advanced oxidation and disinfection
- Membranes
- Treatment and energy optimization
- Brine management
- Hydraulic modeling and planning
- Pumping optimization
- Trenchless technologies
- Advanced inspection methodologies
- Program management
- Asset management
- Regulatory compliance
- Systems engineering

Yuliana Porras-Mendoza, Garver's Funding Expert, has over 20 years of experience navigating the funding landscape.
Working with Bureau of Reclamation, Yuliana started as a researcher, and advanced to water treatment research program management and strategic planning. While there she executed research projects and increased funding support of the research program, as well as built strategies to share information across federal government departments and the water industry.

Evaluation Criteria

For this proposal, we have structured the document around the requirements listed in the RFQ. Additionally, we have highlighted sections that address the evaluation criteria. On the following pages, keep an eye out for the following icons showing where we meet the RFQ evaluation criteria.

Overall Qualifications of the Team

Stability and References

Previous Experience with the City

Ability to meet Schedules and Deadlines

We are a local firm, backed by the resources and expertise of our national team. These experts will be available to you no matter their location.

Over **$483 Million** in Total Funding Secured in the past 5 years

1,339 Total Firm Employees

368 Total Water Employees

155 Water Employees in Texas

1,327 Texas Water Projects in the Last 10 Years

15 Water Reuse Projects

913 Water and Wastewater Treatment Projects

Sherman Water Treatment Plant Expansion
| Sherman, TX

Stability and References

Ability to meet Schedules and Deadlines

Garver designed a 5 MGD plant expansion under an accelerated schedule.

To meet historical growth demands, the City of Sherman needed to increase their water capacity. Garver is currently working with them to provide design and construction support through two packages to increase their overall capacity from 20 to 55 MGD.

In the first package, we expanded the filtration system within the existing membrane building and expanded the existing treated water high-service pump station to meet immediate capacity demands by increasing capacity by 5 MGD by 2024. To do this, we've designed two ultrafiltration (UF) and one reverse osmosis (RO) skid to match the existing equipment. Our design implements disc filters to improve filtration, and includes associated piping modifications, electrical modifications, instrumentation additions, and SCADA integration. We also evaluated the pre-treatment systems, including chemical feeds and pre-oxidation basin capacity. With the design phase completed, we'll assist with bidding and providing construction administration and observation services.

The second package involves developing a master plan of the WTP to determine the phased improvements needed to meet the plant's capacity goals over the next decade. To achieve this, we're conducting process, mechanical, electrical, and structural assessments of the existing plant to determine what facilities can be depended upon for future production.

In addition to our site assessments, we're reviewing previous studies and reports, the previous three years of process data, water quality data, daily monitoring reports, and operations and maintenance (O&M) manuals. These help evaluate the current operating conditions of the plant. As part of the evaluations for treated water blending, we're developing a test plan and protocol for disinfection byproducts (DBPs) testing and corrosion studies.

Completion Date
Package 1: 10/31/2023
Package 2: Design completed 05/01/2024

City of Sherman, TX
Thomas Pruitt, PE
Utility Engineer
903-892-7201
tomp@ci.sherman.tx.us

Project Relevancy

In order to drastically increase water production capacity due to growing demands, Garver worked with the city to expand nearly every aspect of their water conveyance, treatment and quality systems. Not only was our team able to increase capacity, but we were able to do it on an accelerated schedule.

Garver's accelerated schedule delivered design ahead of schedule to keep construction completion on-time.

CONCEPTUAL DESIGN → PRELIMINARY DESIGN → FINAL DESIGN → CONSTRUCTION

Completed on time | Completed early | On Track

SAWS Steven M. Clouse Water Reclamation Facility Expansion | San Antonio, TX

Stability and References

Ability to meet Schedules and Deadlines

Garver's design increased plant capacity and improved energy efficiency and hydraulics.

Garver is working with SAWS on a $200 Million capital improvement project at the Steven M. Clouse Water Recycling Center (SMCWRC), which is SAWS' largest WRC that services San Antonio and surrounding areas. This project is the first capital improvement project that SAWS will undertake following the completion of the 2020 SAWS Master Plan that was developed by Garver. As per the 2020 SAWS Master Plan, the Steven M. Clouse Water Recycling Center (SMCWRC) is expected to undergo significant growth within the considered planning horizon. The project will increase capacity and improve energy efficiency and hydraulics.

The 2020 Master Plan determined that flows to the facility are projected to increase to 128 MGD on an average basis and 396 MGD on a peak two-hour basis by 2050. So, the capacity of the existing primary clarifiers, aeration basins, and settling tanks will be expanded to meet the 2050 flow and load requirements. The existing positive displacement blowers will be replaced to meet the current and future air demands for an effective aeration process and improved energy efficiency.

Additionally, the SCADA and electrical systems associated with aeration and the blowers will be upgraded, along with improving system automation, controls, and instrumentation to optimize performance of the primary and secondary facilities.

While design will not include nutrient removal technologies, it will look for opportunities to accommodate changes made in the near future for biological nutrient removal (BNR). The design process will utilize both computational fluid dynamics modeling and GeoSLAM technology to analyze the existing and proposed structures, accurately map the existing infrastructure and environment, and determine an optimized wastewater flow split.

Completion Dates
Est. 12/18/2026

City of San Antonio, TX
Ila Drzymala, PhD, PE
Project Manager
210-233-3401
ila.drzymala@saws.org

Project Relevancy

Garver's experience with increasing plant capacity for San Antonio exemplifies the experience we have working with larger cities across Texas. This experience will be crucial in assisting Edinburg with increasing efficiency and meeting higher demands.

Our experience with plant expansion projects has enabled us to stay on schedule.

CONCEPTUAL DESIGN → PRELIMINARY DESIGN → FINAL DESIGN → CONSTRUCTION

Completed on time | Completed early | On Track

Sulphur Springs WTP Filter Rehabilitation
| Sulphur Springs, TX

Stability and References

Ability to meet Schedules and Deadlines

Garver's design enables the City to meet current demands while considering the need for future expansion and scalability.

The City of Sulphur Springs needed to expand their water treatment plant from 10 to 12.5 MGD due to industrial and residential growth, and Garver was tasked with evaluating the current treatment processes to determine any capacity limiting factors. Treatment processes include pre-oxidation (utilizing chlorine dioxide), coagulant and polymer chemical feed, rapid mix, sedimentation basins, dual media filtration, chlorination, clearwells, caustic feed, high service pumping, and chloramination.

After conducting condition assessments and closely evaluating relevant regulations, Garver found that the primary limiting factors were the dual media filters and disinfection capabilities on-site. Preliminary and final designs focused on rehabilitating and re-rating the existing filters and underdrain system.

During final design, storage capacity (i.e. clearwell volume) and an alternate disinfection regime were also evaluated for future expansions (beyond 12.5 MGD). Although the existing filter depths would not allow true biologically active filtration (BAF), Garver closely analyzed the disinfection regime under current and future scenarios to see what operational improvements could provide additional capacity. Through this, we determined that if an alternative disinfection location was used towards the end of treatment, this would allow for some biological filtration to occur across the filters and provide a significant amount of additional capacity by utilizing the clearwell volume for disinfection credit.

Garver then conducted a plant-wide re-rating of the plant with TCEQ and designed improvements to the filter units to increase the plant capacity to 12.5 MGD.

Completion Dates
7/11/2024

City of Sulphur Springs, TX
James Jordan
Director of Utilities
903-885-7541
jjordan@sulphurspringstx.org

Project Relevancy

Through the successful implementation of innovative solutions, Garver played a key role in the expansion of Sulphur Spring's water production, treatment, and distribution system. The recommendations made for alternate disinfection location allowed for additional capacity throughout the plant.

Our team's efficiency kept the project on track for timely completion.

East Rio Hondo Water Supply Corporation WTPs Evaluation | Rio Hondo, TX

Stability and References

Ability to meet Schedules and Deadlines

Our evaluation determined the economic feasibility that allowed the plant to be re-rated from 8 MGD to 16 MGD.

Garver had an ongoing master agreement for engineering services with East Rio Hondo Water Supply Corporation (ERHWSC). Under this agreement, we performed a study to assess the feasibility of rehabilitating, expanding, and/or re-rating ERHWSC's surface water treatment plants.

Through this study, we evaluated the Nelson Road Water Treatment Plant (NRWTP) and the Martha Ann Simpson Water Treatment Plant (MASWTP) to determine the economic feasibility of expanding both plants. We reviewed available record drawings, historical water quality data, and equipment information. Our team also identified further water quality studies, capital improvements, and/or operational improvements that should be considered as part of rehabilitation or expansion at both WTPs.

Our team sent process mechanical, structural, and electrical engineers to both WTPs to evaluate the condition of the existing facilities. This evaluation focused on the age, condition, reliability, efficiency, and operability of each unit process and the related equipment. Through this effort, we identified facilities in need of rehabilitation, major repairs required to maintain or return facilities to an acceptable level of service, and major repairs required to rehabilitate, modify, improve, or re-rate facilities to a higher capacity.

The study also included evaluating up to three technologies to improve algae removal at both WTPs, including ballasted flocculation with and without powdered activated carbon, low pressure membranes, and dissolved air flotation. Each technology was evaluated based on its expected impact on finished water quality, ability to fit within the existing treatment process, and compatibility with finished water from ERHWSC's other WTPs.

Following our evaluation Garver is now working on improvements to the Nelson Road WTP. The client is in the initial phases of project development. In this initial phase Garver was able to help secure funding (both state & grant) in 2023. Garver will also be assisting in developing designs for the improvements but have not gone into detailed design yet.

Completion Date
09/02/2022

East Rio Hondo Water Supply Corporation
Brian Macmanus, PE
General Manager
956-748-2605 x215
bemacmanus@erhwsc.com

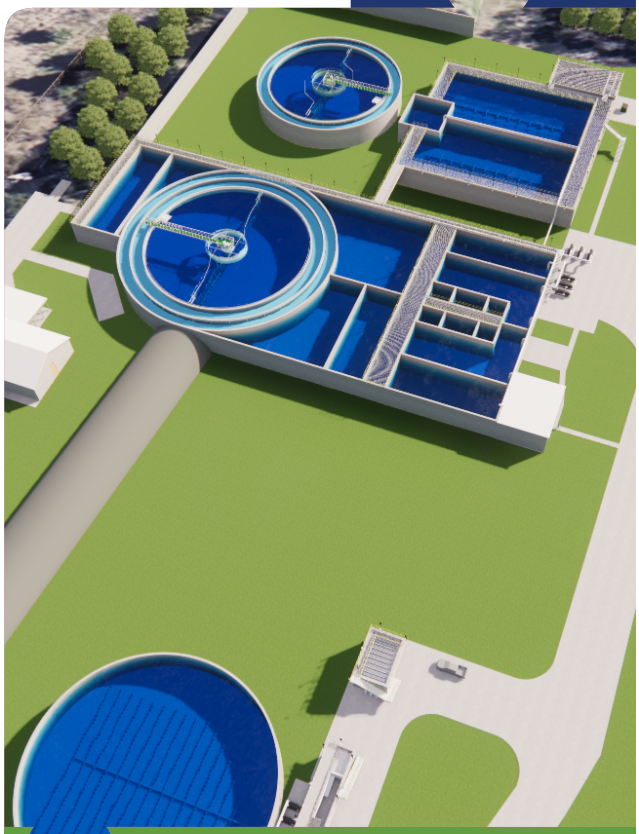
Project Relevancy

Our evaluations provided the information needed to assess the feasibility of expanding treatment capacity at both plants to meet future demands. Garver's efforts provided the basis and roadmap for future work by identifying improvements that would be further developed with future design projects.

Sugar Land West Wastewater Treatment Plant Evaluation & Expansion | Sugar Land, TX

Stability and References

Ability to meet Schedules and Deadlines



Garver improved treatment performance by leveraging existing assets and integrating a new headworks.

Garver worked with the City to provide 1.6 MGD of additional capacity while improving operational reliability and helping to mitigate permit discharge violations. We identified alternatives with beneficial re-purposing of existing facilities to reliably and cost effectively improve treatment performance by leveraging their existing assets. The project included a novel approach to primary treatment by integrating new headworks that will provide more familiarity to operations staff. The overall balanced approach to the expansion is estimated to save the City $10 million (2022 estimate) compared to all new infrastructure.

The project is needed to provide collection system improvements to support development and growth from the new development project as well as capacity and operational enhancements for the New Territory Wastewater Treatment Plant (WWTP). The City of Sugar Land owns the New Territory WWTP, which is operated by the Brazos River Authority (BRA). The facility currently serves the River Park and New Territory developments and the surrounding area. The existing New Territory WWTP has a permitted capacity of 2.5 MGD and hydraulic expansion is anticipated along with needed preliminary and secondary treatment enhancements.

Challenges included identifying treatment limitations, assessing current and future operational and maintenance issues, ensuring compliance with permit requirements, meeting future flow projections, addressing extended periods of no flow, and managing FOG in the aeration basin. To tackle them, the team conducted operator interviews and site visits to understand the issues, identified preliminary and primary treatment alternatives for reliability improvement, and developed a biological process model using GPS-X software to assess treatment risks and plant capacity. Currently Garver is working on the design and construction of the facility to facilitate the improvements needed.

The Evaluation portion of this expansion is complete, and the project is currently in the design and construction phase. Utilizing Garver's recommendations from the evaluation, we will work with the City to address capacity and find the best solutions for their expansion.

Dates Completed

City of Sugar Land, TX

Timothy Jahn, PE
Assistant City Engineer
281-275-2742
tjahn@sugarlandtx.gov

Project Relevancy

Garver's assessment of operational and maintenance issues allows for the City to address plant capacity while striking a balance between new infrastructure and rehabilitation of old infrastructure. This not only saved time, but maximized the money saved by the City.

3 Team Member Qualifications and Experience

Garver offers a full range of in-house capabilities, and our team members are available and responsive to your needs to help meet demands of a growing population.

Organizational Chart

We have assembled a project team who will serve as a seamless resource to provide Edinburg with high-quality solutions that fully meet your expectations. Garver's proposed project team has a unique blend of talent with proven expertise in successfully completing water and wastewater projects for growing communities across Texas. Our engineers and planners are knowledgeable in the necessary improvements needed to meet demands.

THE CITY OF Edinburg

Water/Wastewater Master Planning Lead

Dan Olson | PE
Potable/Non-Potable Reuse Lead

Ashley Pifer | PhD, PE
Water Quality/TCEQ Lead

Kirby Young | GIT
Funding Support

Jennifer Russell | EISE, CSEP
Risk Management Lead

Susan Chavez
Environmental Lead

Anita Smith | APR
Public Outreach/ Communications Lead

As one of the fastest growing cities in the country, the City of Edinburg is experiencing substantial growth, and strategically planning how best to meet and get ahead of the infrastructural needs will serve the community for years and decades to come. We've included staff on our team that have helped other communities throughout Texas do the same - from new water sources and design to funding and regulatory navigation, we can support Edinburg in this endeavor. We'll work with the City to implement its vision for sustainable growth, striving to be more than just a consultant but a partner you can trust through these critical projects.

— *Isaac Huacuja*

Isaac Huacuja | PE, CFM
Project Manager

Isaac has dedicated his career to delivering quality results for the people of South Texas. Today, with a focus on water treatment, his project work centers on treatment plants, clarification, rapid mix, and flocculation, as well as distribution systems. He knows a project's success depends on more than just providing solutions. Isaac has the expertise required to communicate technical answers in ways clients and communities can understand and appreciate. His passion for project delivery stems from his commitment to the Rio Grande Valley. He's seen first-hand how vital infrastructure projects—like water treatment plants—can make a world of difference in the community.

Isaac is dedicated to providing you with the level of service needed for a complex project. He understands that for these projects to be successful, a high level of commitment is necessary. He is ready and willing to provide the needed time and effort to see Edinburg's projects through the finish line.

Education
Bachelor of Science in Civil Engineering

Licenses
Professional Engineer, TX #143866

Certified Floodplain Manager, TX #3897-20N

Valley Municipal Utility District #2 Design of Greenfield Wastewater Treatment Facility | Rancho Viejo, TX

Project manager for all aspects necessary for the design of a new, greenfield site wastewater treatment plant (WWTP). Technical Memoranda were prepared to document the decision-making process of various components, including a site selection study, alternatives analysis, and technology evaluation, among others. The design effort for the new WWTP includes an engineering report to document design criteria, all TCEQ permitting assistance for a new TPDES, and the production of plans and specifications for bidding.

East Rio Hondo Water Supply Corporation Southside WWTP Expansion | Kingsville, TX

Project manager for this project to implement this first phase of capacity expansion of an additional 0.5 MGD of treatment. The team is evaluating facility site planning and future layout based on full build-out capacity and expected water quality (using Lozano WWTP data) for Treatment Technology Evaluation.

Laguna Madre WTP Rehabilitation | Laguna Madre, TX

Project manager for the design of upgrades and rehabilitation for the existing 4 MGD and 1 MGD clarifiers, as well as the rehabilitation of the flocculation and rapid mix systems. Additionally Isaac worked on the rehabilitation of the yard piping leading to the filters. *(Previous Experience)*

Randy understands the complexities of treatment systems and the necessary improvements to keep systems compliant and functioning efficiently.

Education

Master of Engineering, Civil and Environmental Engineering

Bachelor of Science in Civil Engineering

Licenses

Registered Professional Land Surveyor, TX #4853

Professional Engineer, TX #64930

Board Certified Environmental Engineer, #05-20069

Randy McIntyre | PE, BCEE

Principal-in-Charge

Randy's ability to see projects from multiple perspectives comes from his well-rounded experience. He has held positions with varying responsibilities on a wide range of projects including water/wastewater treatment, collection and distribution systems, pump stations, master planning, construction management, and surveying. Randy understands how every system and operation work together, so when issues arise, he can identify the source and develop designs that effectively improve the whole system.

He approaches each project by keeping communication open, bringing the team and client together to collaborate on an effective project solution. Additionally, Randy has worked within municipal organizations, and he brings this perspective to each project, understanding the needs and expectations of clients. All his combined experience instills an ability to look at projects from all angles and bring experts together to develop dialogue, finding resolutions to even the most complex of problems.

Lake Lewisville WTP Improvement Study & Design | Denton, TX

Principal for evaluation of water treatment plant improvements. Evaluated filter backwash piping repair and improvements. Coordinated with staff regarding water treatment alternatives during algal blooms. Principal for design of plant rehabilitation with addition of ozone disinfection and biological filtration.

Elm Fork Water Treatment Plant Master Plan & Facility Designs | Dallas, TX

Principal and technical evaluations for 330 MGD WTP facility evaluations, structural evaluations, operations assessment, alternative treatment systems and development of master plan of plant improvements. Pilot study to confirm new process operations. Principal for improvement designs under multiple packages: new chlorine facilities, sedimentation basin rehabilitation, solids handling and lagoon rehabilitation, security improvements and hydraulic improvements, high service pump station, rapid mix, and flocculation. *(Previous Experience)*

Enid Kaw Lake Water Supply | Enid, OK

QA/QC for all of the project designs and lead of technical review committee (TRC) for intake, pumping, raw, and finish water transmission mains. The raw water pipeline will consist of approximately 70 miles of 36-inch pipeline along a direct corridor and an intermediate booster pump station, the finish water transmission main travels through a fully developed corridor across town. The TRC tasks generally consist of providing pipeline alignment selection, system hydraulics evaluations, intake operability and constructability. Treatment facility QA/QC reviews focused on constructability and operability of the systems.

Having worked with the USBR, Yuliana knows how to navigate funding requirements, streamline applications, and develop funding strategies that utilize multiple funding opportunities.

Education

Master of Science in Environmental Engineering

Master of Science in Technology Commercialization

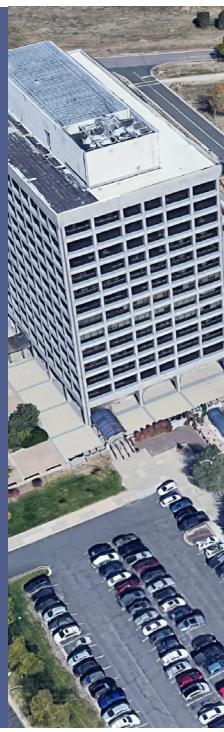
Bachelor of Science in Chemical Engineering

Yuliana Porras-Mendoza

US Bureau of Reclamation Lead

Before joining Graver Yuliana spent her career working with Bureau of Reclamation, starting as a researcher, and advancing to water treatment research program management and strategic planning. While there she executed research projects and increased funding support of the research program, as well as built strategies to share information across federal government departments and the water industry.

Her passion for sharing information, collaborating across the industry, and for water in general eventually led her to One Water Program with Garver. Through One Water, Yuliana creates a community of practice leaders, spanning reuse, water and wastewater treatment, stormwater, planning, forecasting, and every other area of the industry. Together, she enables these groups to holistically look at water challenges and create unified solutions.



Bureau of Reclamation Desalination and Water Purification Research (DWPR) Program

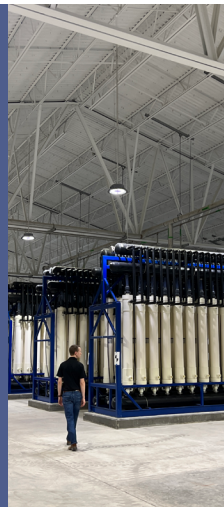
Managed and administered the Desalination and Water Purification Research (DWPR) Program and coordinated and guide the Developing Water Supplies (WS) portfolio of research projects within the Science and Technology (S&T) Program. Within the WS portfolio, a key area of work was in the advanced water treatment (AWT) research area. Coordinated all Reclamation AWT research by developing Reclamation's overall strategy in this area, by maintaining a close understanding of all related research, by encouraging innovation and evaluate new technologies to reduce costs for Reclamation's engineering, construction, and operations.

Bureau of Reclamation Water Treatment Science & Technology Program

Program manager of the portfolio of funded research projects in the Developing Water Supplies (WS) research category. The largest research area was the advanced water treatment research area with a total of $1 to $2 million in research projects conducted and led by Reclamation researchers and engineers. Oversaw an average of 10 different active projects in various stages of research where some are in collaboration with partners such as academia, municipalities, and the private sector. Created and led the Water Treatment Community of Practice which is a group where Reclamation employees learned about water treatment work that was on-going and results of research that had been completed. The group was essential as a peer review group for strategic documents such as the Advanced Water Treatment Research Roadmap and the DWPR Program Strategic Plan.
(Previous Experience)

Buddy's national expertise with advanced technologies will help Edinburg find the best value solution to their water resource needs and address drought challenges.

Education
Bachelor of Science in Chemical Engineering



Licenses
Professional Engineer, TX #119621

Buddy Boysen | PE, PMP
Membrane Desalination Lead

Buddy is a process engineer in water and wastewater treatment who specializes in innovative membranes technologies and advanced treatment technologies. His treatment experience covers every project stage from pilot testing to construction and start-up. With his areas of interest in brackish groundwater desalination, potable water reuse, and water reuse projects, he's developed patentable technology for desalination treatment and implemented large diameter reverse osmosis improvements.

Sherman Water Treatment Plant Expansion | Sherman, TX

Technical lead and design phase manager for the design and construction of two brackish surface water treatment design packages. The first package is a rapid expansion to help meet water demand, which includes a 5 MGD expansion of the UF, RO and related support systems. The second package is the design and implementation of a new 30 MGD UF/RO water treatment system, which will expand the plant to a total of 50 MGD of capacity making it the largest RO facility in Texas. As part of the second package improvements, the facility is also performing full scale testing of chlorine dioxide and chloramine pretreatment.

Joint Industrial Partnership Pilot | Orla, TX

Engineering lead on the project and as a process specialist for this program which is evaluating thermal and advanced membrane processes for high salinity brine treatment. He is also subject matter expert for membrane technologies on the project. In his role on the team, he has helped develop R&D testing requirements for the Universities who are supporting the pilot program. He performed equipment sizing and helped to select the treatment equipment used during pilot testing. He has been hands-on involved in pilot construction and start-up and is presently supporting the ongoing pilot operations.

BWA Master Plan Update | Lake Jackson, TX

Desalination lead for the Brazosport Water Authority's long-term master plan. Responsible for assessing seawater desalination feasibility as a new water source for BWA. The study focuses on conveying, receiving and treating desalinated seawater from a 3rd party and in addition to cost impacts of the new water source focuses on water quality blending and stabilization over a planned range of blending to meet the associated potential water demand scenarios. *(Previous Experience)*

Evan has over 20 years experience customizing master plans and detailing hydraulic models to create roadmaps for clients' long-term goals.

Education

Ph.D., Civil Engineering - Water Resources

Bachelor of Science in Engineering, Civil Specialty

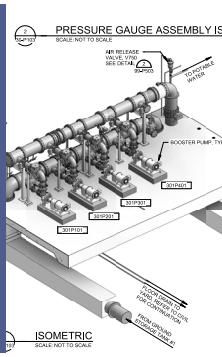
Licenses

Professional Engineer, TX #121119

Evan Tromble | PhD, PE

Hydraulic Modeling Lead

Evan Tromble has 20 years of experience and is Garver's Water Practice Area Teams Manager, leading teams specializing in water resources, hydraulic modeling, master planning, utility management services, program management, and project implementation. As a leader in hydraulic modeling and master planning for Garver, he oversees hydraulic modeling, alternatives evaluations, and master planning efforts for water supply, conveyance, water distribution, and wastewater collection systems. Through open communication, Evan works with technical staff and clients to gather all necessary information to identify the best alternatives. He focuses on understanding the system as a whole, including identification and analysis of all potential operating conditions both current and future, so he can identify key elements impacting system performance. Through this in-depth system understanding, he develops optimized concepts for improvements that address system challenges while limiting the potential for stranded capital and negative unintended consequences.



Kilgore WTP High Service Pump Station | Kilgore, TX

Technical lead for the conceptual design of upgrades to the high service pump station (HSPS) at the Kilgore Surface Water Treatment Plant. This evaluation assessed system capacities for the surface and groundwater supplies, pumping, and storage against TCEQ requirements. The evaluation also included an update and calibration of the distribution system hydraulic model for use in developing the system curve envelope for the HSPS, which was used to identify design points for the new HSPS pumps.

Bay City North Water Treatment Plant| Bay City, TX

Lead hydraulic modeler for designing a new 1.5 MGD North Water Treatment Plant (WTP) to effectively cater to the increasing demands of the city. By considering the water supply, storage, and flows, our team oversaw that the WTP could meet the rapidly growing demand. Garver delivered a design that not only met the current demands but also allowed for future expansion and scalability.

Project 7 Water Authority Program Management | Montrose, CO

Lead hydraulic modeler responsible for the development of a hydraulic model incorporating the regional supply and distribution systems of the seven entities that comprise Project 7. Led development of the hydraulic model that included conversion of existing hydraulic model files to a common platform, incorporation of GIS files into the hydraulic model, and connection of models at interfaces between both the wholesale supplier and the customer systems and emergency connections between customer systems.

With a career devoted to pipeline projects, Michael understands how to deliver long-term solutions that support the current and future growth of communities.

Michael Salinas | PE
Linear Infrastructure Lead

For the entirety of his career, Michael has been devoted to design and construction services for underground infrastructure in Texas. He has provided design of water and wastewater conveyance ranging from 8- to 120-inches and trenchless rehabilitation. Furthermore, he has hands-on experience working with contractors and subconsultants during construction to deliver top-quality results that each client expects and deserves. His construction experience includes inspection services for pipeline, roadway reconstruction, and trail construction. Having significant experience with TxDOT, Michael can help prevent the recurrence of design issues on future projects. Additionally, Michael has experience coordinating with utilities and managing traffic control to avoid project delays through construction phasing.

Education
Bachelor of Science in Engineering, Architectural

Licenses
Professional Engineer, TX #123342

Friendswood Clear Creek Crossing | Friendswood, TX

Engineer of record for the design of a 7,000 linear foot of new 24-inch water transmission main. Various water line routes were analyzed for constructability and future maintenance access. Garver provided professional engineering services for the master plan, design and construction phase services for water system improvements. As part of the 2022 CIP, two projects were identified as immediate needs for the City: Project 1 – Clear Creek Crossing, was identified as the first project needed to eliminate the water system's hydraulic bottleneck at Clear Creek and Project 14 – New GST and Pump Improvements at SWP 1.

Gulf Coast Water Authority's (GCWA) Existing Raw Waterlines | Texas City, TX

Project engineer who assisted on the design of flow meters for the Gulf Coast Water Authority's (GCWA) existing raw waterlines at three different locations in Texas City. Prepared CAD drawings for site plans, vaults, and exhibits. Assisted in the Engineer's Cost Estimate and researched and solicited material cost data from various suppliers to obtain a typical unit price cost data. *(Previous Experience)*

Project 7 Ridgway Water Treatment Plant Owner's Advisor Services - Water Line Design | Montrose, CO

Project manager for identifying route alternatives for 9 miles of raw water and transmission main. Assessed pipeline materials to accommodate proposed and future flow rates, identified easements to account for the proposed pipeline along with a future pipe, coordinated with state entity to confirm alignment was outside ROW. Trenchless crossings were conceptually crossed to avoid impacting rivers and/or streams. An opinion of probable construction cost was developed for budgetary purposes.

Ian Toohey | PE

Water/Wastewater Master Planning Lead

Ian has always maintained the link between design, construction, and operation. His 15 years of experience has given him the ability to approach each project with the end in mind and the long-term implications it will have on operations and maintenance. His previous experience working for a major Central Texas water utility gives him the client perspective regarding the challenges they face. Having served on the owner side of a water system's management, Ian knows how to engage with clients, understand where they come from, and their response when adapting to change.

Ian leverages his experience as both a client and consultant within the industry to develop solutions that align with their goals and long-term needs.
